

HARWORTH ESTATE, ADVANCED MANUFACTURING PARK

Project Details

Type Of Work Undertaken:

Earthworks, Groundworks, Landscape, Sub-base

Client: Britcon Limited

Value: £100,000

Form of Contract: JCT

Duration: 16 Weeks

Project Overview:

Once Orgreave Colliery, now a 150,00sq ft industrial unit built on the foundations of Orgreave Colliery's mine shaft. Located in Catcliffe, we had the pleasure of working alongside Britcon Limited to help deliver this project to the best of quality.

We initially set out to subbase the external yard, carpark and road surrounding the unit. We utilised our Bobcat and grader blade running our Trimble 3D system via total station. During the course of the works, we brought in more reinforcements to help push the groundwork's on site. We completed a full substation build aswell as helping with laying kerbs, digging and laying drainage and top soiling. We also provided our in house Steel Fixers, Carpenters, Bricklayers and Concrete Gang to assist with the job in hand. Throughout this job we met targets, worked seamlessly with the client and produced some high quality work.
