

CLARENCE STREET YORK

Project Details

Type of Work Undertaken

Earthworks, Groundworks, Drainage, Block & Beam

Client: Landstock Developments

Value: £450,000

Form of Contract: JCT

Duration: 18 Weeks

Project Overview:

What was once an old working mens club now a student accommodation in the heart of York. We had the privilege to work alongside Landstock Developments on a new 34 bed apartment block on Clarence Street.

During our time working on the historic streets of York, we helped develop this stunning apartment block being the lead Groundwork's team on site. We had a range of our in house teams working hard on this site including our Groundworks Team, Steel Fixers, Bricklayers and Carpenters. We provided the full package leading us to digging and pouring foundations, laying drainage throughout site, laying block work up to damp course and block and beaming throughout. We also had our in house Steel Fixers and Carpenters helping provide a full raft build and pour on site.
