

Why Gas Generators?

Contact Us

A standby generator offers a permanent backup power system with automatic operation, and direct fuel connections that turns on within seconds of a power failure and then will turn itself back off when the power is restored. Whether for your home, shop or barns, they can be sized to meet the demand you need.

- ✓ Quote, supply & installation
- ✓ Qualified gas fitter on staff
- ✓ Local qualified electrician
- ✓ Professionally sized systems
- ✓ Air-cooled & liquid-cooled models

Location

50, 71332 Rge Rd 262
Crooked Creek, AB T0H 0Y0

Natural Gas Standby Generators

Never Be Left in the Dark
Quote • Supply • Install

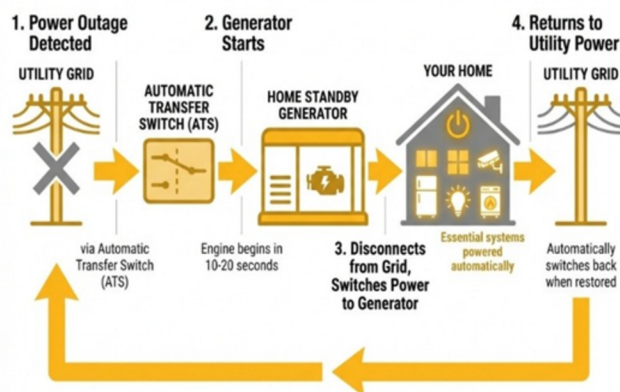

Why Install One?

- Prevents damage to your home by keeping sump pumps running to avoid basement flooding during an outage and maintains heating appliances to prevent freeze-up in a home, shop or barn.
- Protects your essentials when you are home or away.
- Keeps your security system going like alarm systems, cameras, and electronic gates.
- Cattle waterers stay working during winter and summer outages.
- Greenhouses and chicken barns stay safely running.

How It Works

How a Home Standby Generator Works

- 1) Detects a power outage
- 2) Starts automatically within seconds
- 3) Transfer switch safely powers your building(s) from power to natural gas without any manual involvement
- 4) Returns to utility power automatically when power has stabilized

Features

- Continuous fuel source - connects directly to a natural gas line removing the need for refilling.
- Can be set to periodically run a maintenance test cycle weekly, bi-weekly or monthly to ensure it is running properly when a power disruption occurs.
- Comes in single phase or 3 phase power connection.
- Cellular connectivity allows generators to be monitored and started up remotely from an app.
- Comes with a digital display which shows history of alarms and run logs, maintenance logs and also maintenance reminders.
- Very quiet when operating, running at under 50 db during testing cycles.
