

Emely AI is the secure alternative to public AI for your private information

We are on a mission to harness the power of automated intelligence to enrich the workplace experience for everyone. We empower individuals by giving them the gift of time, unlocking their creative potential and enhancing their decision-making capabilities. By embracing the platinum rule, Emely promotes meaningful human connections, fostering collaboration and communication. Our platform drives process improvement and boosts productivity, all while ensuring the highest standards of security, compliance, and privacy. Together with our clients, we are creating a more innovative, efficient, and human-centered workplace of the future.

Platform Pillars

Trust

- Human-in-the-loop (Knowledge Master) ensures your instance of Emely is maintained by continuously training (or untraining) Emely's large language models as needed.
- "Ask Emely" only returns answers from your knowledge base,,, if you did not train her on it, she will not know the answer and will tell you so.
- Your Knowledge Masters have the power to force deterministic answers that always take precedence over generated ones. This is performed through Emely's Q&A table.
- Citations enable source document analysis and response confirmation.

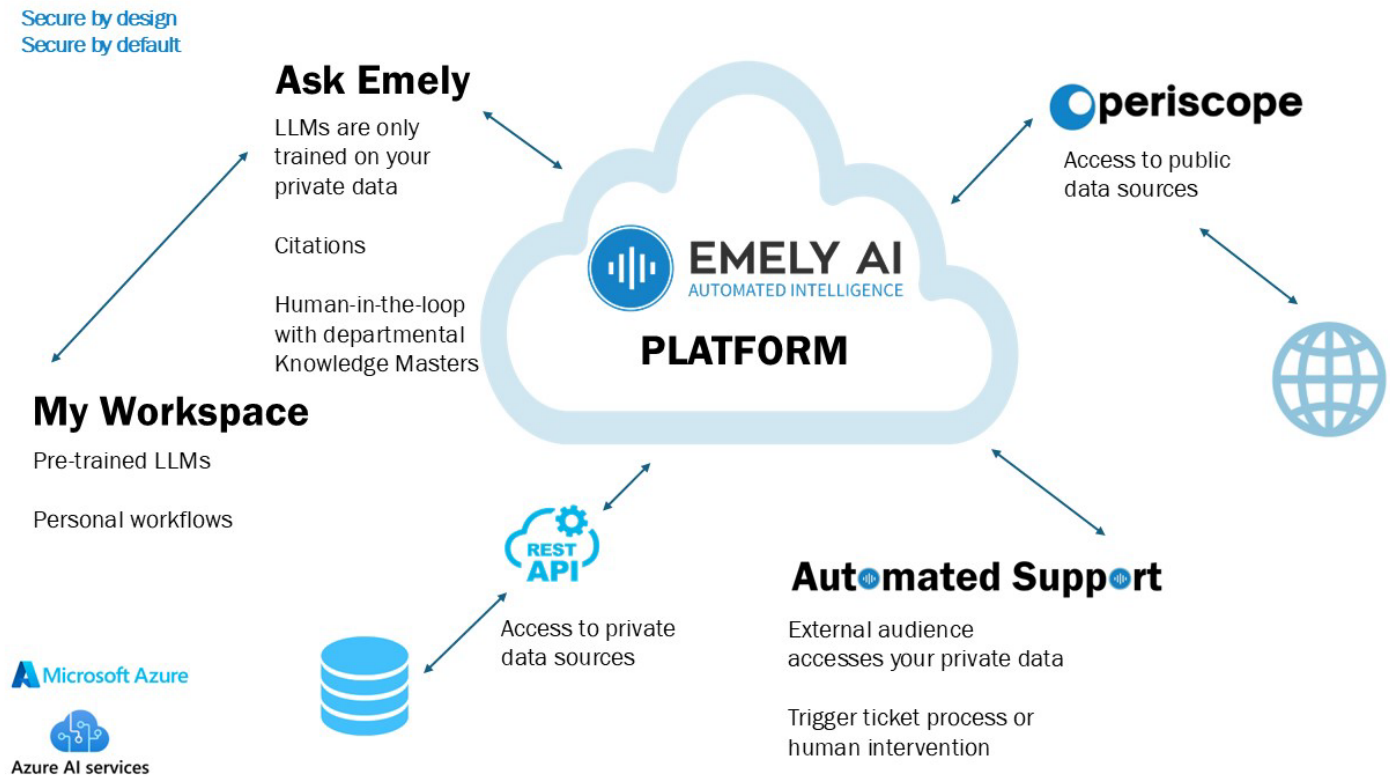

Security & Compliance

- Every deployment of Emely AI is private and secured by client specific federated Microsoft credentials.
- All data is encrypted at rest and in motion.
- Access to information within each system is managed through client's existing Azure groups and role-based-access-control. This is done by tagging sensitive data assets as they come in.
- Every instance of Emely AI is unique to the specific client, each AI model is trained independently, there is no information sharing between clients.
- Emely can securely integrate with your front-end.

Scalability

- Emely is built with Microsoft technology for Microsoft ecosystems, leveraging your existing security, control, and management tools.
- Because Emely runs inside Azure, any size organization from the smallest SMB to large enterprises are compatible.
- Any employee with credentials to access your Microsoft account simply uses their SSO to access the Emely App, nothing else is required from your IT team.
- Accessing Emely through MS Teams is just as easy because Emely runs inside Teams as a true Azure App, also a breeze for IT.
- Our open API allows integrations for data ingestion from other sources.

System Design

Deployment

How easy is it to deploy Emely AI? Two steps easy!

Step one: We stand up your private instance of the platform in your Azure preference:

- Subscription model** – Secure SaaS deployment in our Azure tenant
- License model** - “On-prem” built within your Azure tenant

Step two: Bring in your enterprise knowledge through our app or API and start asking questions

Our talented partners can help you craft and navigate an onboarding roadmap that is custom tailored to fit your organization’s specific requirements.

Emely draws the straightest-shortest line between your employees' questions and the correct answers

Our Leadership Team Delivers

We are a boutique consulting firm that has leveraged our deep expertise to develop an amazing AI platform that is secure by design/secure by default and ready to go.

Our founders are hands-on, deeply involved with software development and client engagement.

We believe in the power of community and collaboration. There is a common thread that is present in our meetings with partners, prospects and clients, that is a culture of curiosity and listening, a hunger for feedback and continuous improvement.

Feedback drives our Agile roadmap in real-time

Michael J Silva

CEO & Founder

Expert in IT operations , cybersecurity, compliance, and leadership

Masters in Cybersecurity (before it was cool)

BS in Information Technology

CISSP

With over 25-years' experience leading data and security-focused teams, running a successful MSP, engineering IT solutions, and innovating with technology, our CEO started Emely AI to augment his helpdesk in 2022. In 2023 he incorporated Emely AI to further develop the platform into what you see today.

Michael Gershfeld “Gersh”

VP Business Development

Seasoned Tech space sales leader, always client focused with a creative approach to communication and problem solving.

BA in Communications

Over 30- years' experience launching new and transformational technology into businesses of all sizes and industries.

Working with enterprise content solutions since the beginning of document management (including converting microfilm to TIFF images).

Our VP is focused on delivering value through real-world use cases that lead to a measurable ROI.
