

EXOSKELETON CATALOG

MANUFACTURING • LOGISTICS • CONSTRUCTION • HEALTHCARE

Exoskeleton Suits are wearable devices that are designed to assist and/or enhance physical activity while protecting the user. ErgoMobil supports passive exoskeleton systems for industrial tasks which are made from soft materials and are not motorized, using elastic bands, springs or other non-powered sources to provide significant assistance to the user throughout their movement for ergonomic support and to prevent repetitive stress injuries.

Overhead Support

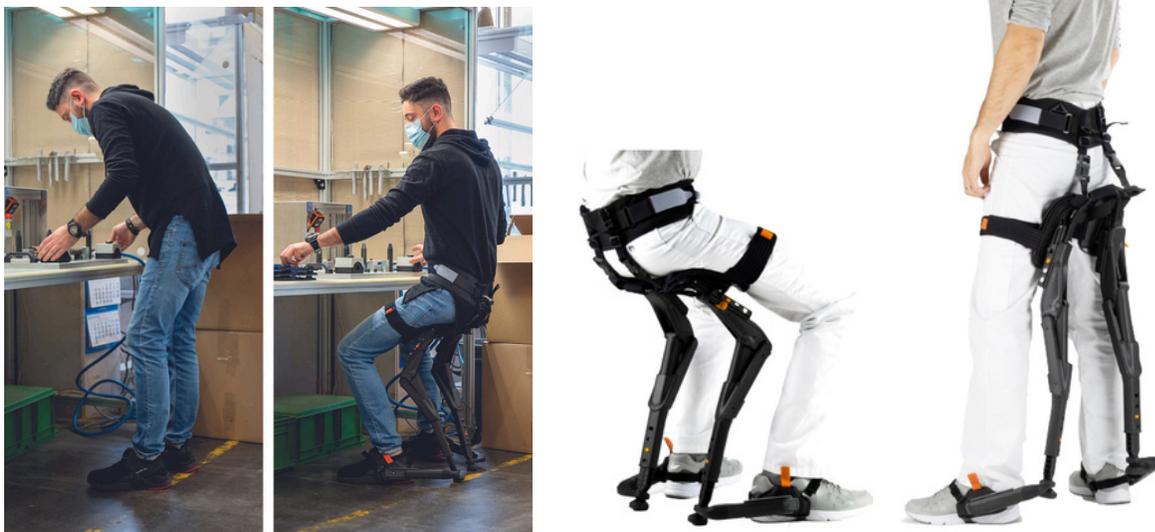

The EVO by Ekso Bionics is a shoulder support exoskeleton designed to reduce worker fatigue when working at or above chest level. This novel approach to shoulder support wearable ergonomic solutions can follow a greater range of the body's motion while maintaining joint alignment. The EVO is capable of handling positions like reaching directly overhead, across, or back. The gas-springs mechanical actuators provide an assistance level that can be adjusted by the user separately on each arm.

Back Support

The *Apex 2.0* by *HeroWear* is a back-assist exoskeleton suit that combines comfort, ease of use and accessibility for workers exposed to frequent lifting, bending, and reaching at work. Our device is non-powered, relying on elastic assistance which doesn't need to be recharged each workday. Its design is modular and based mainly on textile pieces, allowing full range of movement and fit for workers of all sizes, both male and female. With Apex's unique design you can turn assistance on when you need it and off when you don't.

Sit-Stand

The *Chairless Chair 2.0* from *Noonee* is an ergonomic, portable sitting device that enables you to switch between sitting, standing, and walking, replacing disruptive chairs and/or standing supports. Most of your body weight is supported and therefore most of the pressure is taken off your knees, back and discs. Stress caused by standing activities can be avoided.
