Thermography Wellness Center

... peace of mind through safe and early detection.

WHAT IS THERMOGRAPHY? ... Infrared thermal imaging shows subtle and dramatic temperature imaging with thermal and vascular patterns that correlate with various types of pathology.

Medical/Chiropractic Thermography is a diagnostic tool that measures the body's radiant heat emission patterns. The thermal scan provides a visual "heat map" of infrared radiation (IR) in the electromagnetic spectrum from 2-14 μm

band width. Thermography is not a picture of pain but demonstrates thermal and physiological changes in complex tissues that will result from pain syndrome.

Thermography provides physiological information (what is happening right now) as compared to X-ray, MRI, CT scans which provide anatomical information (where or why it happened). Thermography and interpretation adds a third dimension to the clinical picture

Infrared Breast Thermography is non-invasive, no radiation, no injections, and no compression. It is safe for all ages and conditions: Men, Women, Babies, Teens, Breast Cancer Patients, Survivors, Pregnant-Nursing Mothers, and Breast Implant Recipients.
