Thermography Wellness Center

Infrared breast thermography is non-invasive;
no radiation, no injections, and no compression.

Other diagnostic equipment only detects a mass, but Thermography screens for cancer growth through changes in temperatures, thermal and vascular patterns. We use the "Breast Stress Study" system which catches these physiological changes and indicators that can be highly accurate.

... peace of mind through safe and early detection.

WHAT IS THERMOGRAPHY? ... The best way to follow your breast health! Infrared thermography is exceptional in catching breast cancer within the first year of development, as well as detecting and recording more advanced stages of breast malignancy. Infrared thermal imaging shows subtle and dramatic temperature differences along with thermal and vascular patterns that correlate with various types of Breast Pathology. Thermography is of great value in monitoring your Breast Health.

Please tell your families and friends of this "Life Saving Technology"! It is safe for all ages and conditions: Men, Women, Babies, Teens, Breast Cancer Patients, Survivors, Pregnant-Nursing Mothers, and Breast Implant Recipients.
