

Biodiversity – Biotic and Abiotic Factors

Class Discussion:

- What are biotic and abiotic factors?
 - Biotic are living factors like animals and plants
 - Abiotic are non-living factors like soil, water and temperature which effect living things.
- Why are they necessary and interdependent?
 - Biotic and Abiotic factors combine to make up an ecosystem.

Following are biotic and abiotic factors Cut them out and sort them into the 2 groups.

water

ladybug

drought

butterfly

soil

rain

storms

sunlight

crane

tiger

deer

bedrock

wind

sunlight

earthworm
