

TODDLER PROGRAM

- **School for Toddlers (ages 1 to 2 years)**

Toddlers are active learners. Toddlers try to discover how things work, what things do, and what they can make happen. Our curriculum implements developmentally appropriate practices for toddlers as they learn to engage in the physical, natural and social worlds, by observing, manipulating, and exploring. The classroom encourages positive interactions where empathy and expression emerge as toddlers learn to relate to peers and educators.

Toddlers are curious about the world around them—and today that world includes technology. This curriculum employs digital literacy and robotics to spark their interest in how things are coded, programmed and engineered.
