Dear Representative [NAME],

As a resident of Michigan, I'm extremely concerned about the taxpayer funding of rapid, under-regulated AI data centers, and about the lack of protections that are in place for our water, and for us ratepayers. I'm writing to ask you, as a member of the Senate Committee on Energy and Environment, to pass SB 761-763, to address some of these most pressing concerns.

SB 761 would provide much-needed protections to Michigan's aquifers, which are already struggling under the weight of cumulative industrial water consumption. SB 762 would hold data centers accountable for reporting their water and energy consumption—accountability which is essential for developers proposing to use such vast quantities of water and energy. Right now, we Michigan ratepayers are stuck footing the bill for the energy grid upgrades these data centers require. SB 763 would fix that.

This trio of bills represent clear, straightforward, and very necessary protections for Michigan's water and ratepayers, in light of the current trend of unchecked data center expansion.

Please bring these bills to the Committee for a vote, and approve them.

Thank you,
