

Floating Wetlands

Creating Natural Picturesque Waterscapes

Floating Wetlands are floating platforms manufactured using recycled, PET plastic matrix. Vegetated with native aquatic or terrestrial plants, they create a picturesque waterscape above the water, while work hard at cleaning the water below.

The Matrix Advantage

- Natural Beautiful Waterscapes
- Nutrient Reduction
- Habitat Enhancement
- Fisheries Enhancement
- Terrestrial or Aquatic Vegetation
- Customizable Sizes and Shapes
- Easy to Install
- Little Maintenance

Innovation is in our nature.

16 oz. water bottles in
every square foot of matrix

Technology Powered By Water

Green Infrastructure Technology

Floating Wetlands mimic natural floating islands by harnessing the natural processes that clean polluted water and create beautiful habitats

Shape & Sizes

Size (ft2)	Dimensions	# Plant Holes
37	6'6" x 6'	37
75	6'6" x 12'	83
115	9' x 13'	115
225	13' x 18'	225
300	13' x 24'	300

The Floating Wetland Matrix is manufactured with 100% recycled polyethylene terephthalate (PET) sourced from plastic drinking bottles.

A specially formulated proprietary resin binder system is added to improve UV resistance. No phenol-formaldehyde resins are used in the binding process. The Matrix has been tested and was found to be non-toxic to aquatic life. Testing has shown that ZERO degradation occurred after 300 hours. Further testing is ongoing.

In addition, every Floating Wetland is protected using a polyurea coating, which is perfect for marine environments. It is inert, it will not hydrolyze, leach or contaminate. It also provides additional UV protection, contains no VOCs and is direct food contact approved.

Important Information

- Islands are approximately 7 in. thick
- 12 pounds ft2 of buoyancy
- Only able to support small animals and plant life
- Plant holes are 2.5" or 3.5" diameter
- Islands can be custom built in size, shape, & thickness.
- Buoyancy can be customized to support additional weight.
- Images depicted are for illustration purposes only.
- Islands are coated with a food certified, marine grade polyurea for UV protection.
