# CCC Golf Simulator 2025-2026

Start Up Procedures

The simulator set up and software should be ready to use when you arrive other than turning on the projector with the white remote if you are the first member using it for the day. In rare cases, it may be necessary to reboot the PC or someone may exit the software by accident. In those cases please follow these short steps to get the simulator up and running:

- **If the PC is at the log in screen, enter the pin of 1923.**
- **Once the PC is logged in, double click the FSX Play icon on the desktop. It is required to run the FSX Play software to send data to the GSPro simulation software.**

- **Load the practice range within the FSX Play software by clicking through the following menus: Practice > Foresight Sports Practice Facility > Play**
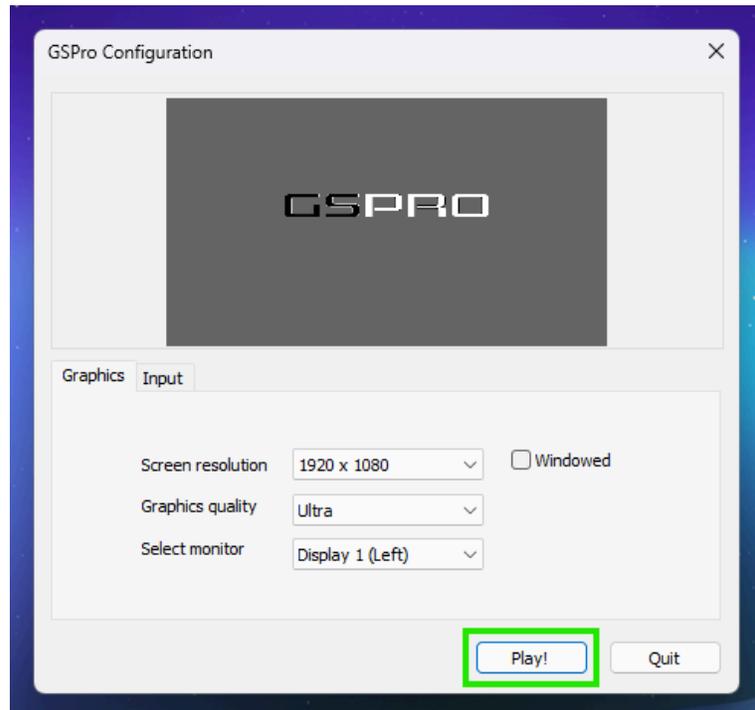

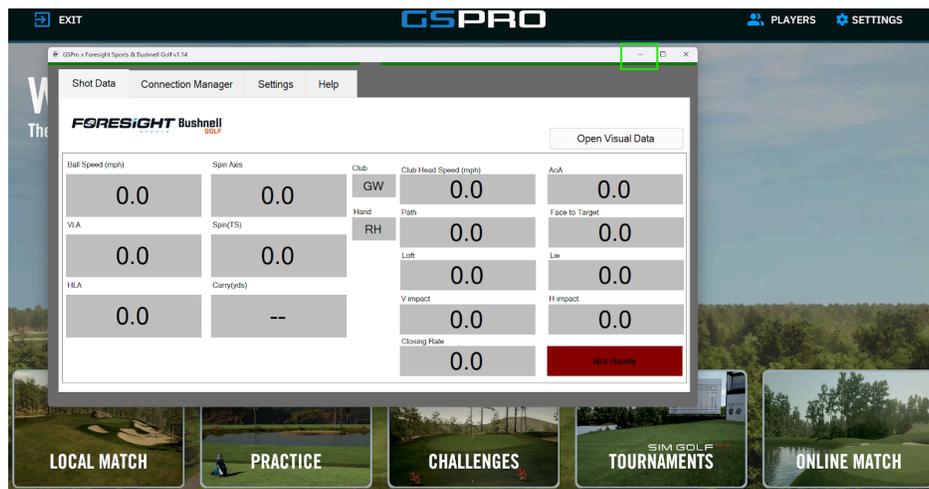

- **Load the GSPro software by double clicking the icon on the desktop**

- **Click Play! on the GSPro launcher window that pops up with these settings selected.**

- **Minimize the connection window that pops up on start up.**

- **You can now load the range or a course to play within the GSPro software. The menus, options, and settings are very similar to previous years and fairly intuitive. If you have issues, questions, or would like to schedule a brief tutorial, please reach out to Matt or Jim.**
