

User Guide: Mast Hole Plug

Purpose: Prevent water, debris, and critters from entering the mast hole (step) when mast is removed. Fits any 2.5" diameter mast hole, for instance on Sunfish and Laser sailboats.

Material: PETG, fabricated by 3D Printing. Gasket made from neoprene rubber. As with most plastics and rubber, these will degrade over time when exposed to UV and water. Rinse with fresh water periodically. Clean with a mild liquid soap and fresh water. When not in use, best is to store parts in a dark, dry location.

Installation:

1. Test fit the plug in the mast hole. On older boats, repainting and repairs may have reduced the diameter of the hole and the plug may not slide in easily. Sand off excess surface gel coat / paint in hole if this occurs.
2. Plug should fit snugly in the hole and rubber gasket should lay flat against the boat's deck to prevent entry of water and dirt.
