SDCI 2026

AUGUST 28-29, 2026

LA JOLLA, CA

Overview

The **San Diego Cardiovascular Interventions Symposium**, will focus on disseminating the knowledge and evidence-based data regarding novel and innovative therapeutic options for patients with complex coronary, structural and peripheral vascular disease.

Learning Objectives

- Identify new techniques and technologies for bifurcation and left main PCI
- Identify the role of various lesion modifications/atherectomy techniques prior to coronary interventions for calcified lesions
- Identify the utility of adjunctive hemodynamic support to facilitate complete coronary revascularization and perform high-risk PCI
- Comprehend the approach to coronary balloon angioplasty and vessel preparation prior to drug eluting balloon treatment for denovo coronary disease and in-stent restenosis
- Review the data and indications for percutaneous VADs in severe decompensated CHF and cardiogenic shock
- Review the contemporary data and indications for TAVR, percutaneous tricuspid valve replacement and new structural heart interventional procedures
- Identify the role of left atrial appendage closure and percutaneous mitral/tricuspid valve repair
- Identify optimal oral and intravenous antiplatelet therapy during and after PCI
- Review optimal utilization of FFR, IVUS, and OCT in reducing inappropriate PCI
- Identify appropriate patients and approaches for carotid and peripheral vascular interventions
- Identify appropriate patients with uncontrolled hypertension who are candidates for renal denervation
- Identify occupational hazards of interventional cardiology and strategies to reduce radiation association risk
