

Faster than the hackers. With security audits and monitoring

IT-Security-Monitoring in real time **Accelerate your cyber security process without effort**

Hackers scan the Internet for vulnerable systems every hour. At the same time, the number of new vulnerabilities published every day is increasing rapidly. What use are temporary pentests? The result is outdated the next minute. Automated security audits regularly check your company-wide IT landscape in real time, so you can easily keep an eye on the situation. You identify potential vulnerabilities immediately and are able to take proactive action.

In the event of security-critical changes, the notification function automatically sounds the alarm and takes you directly to the findings. This accelerates the optimization process and permanently minimizes risks.

LocateRisk

Audit your suppliers

Third-Party Cyber Risk Management Reduce Supply Chain Risk in your Business through automated third-party monitoring

Do existing and potential business partners stand up to your IT security requirements?

Attack technology is changing rapidly and with it the security situation of companies. Systematic monitoring is required to provide you with comparable results on the security situation of your business partners.

LocateRisk enables you to continuously screen, rate and monitor your partner network. Based on fully automated risk assessments, you receive an overview of the external IT security situation of the individual companies in the shortest possible time as well as concrete recommendations for the elimination of possible weak points. This significantly reduces the amount of work and resources required and ensures greater security in the supply chain.
