

Common Responsibilities of All Deployed Responders

- ❖ Be prepared to deploy – have GO kit(s) ready
- ❖ Receive assignment – DO NOT self-deploy
 - Reporting location, time and travel route
 - Description of type and severity of incident
 - Instructions for communication while enroute
 - Monitor incident status while enroute
- ❖ Start an ICS214 to document activities
- ❖ Upon arrival, check in at correct location
- ❖ Receive briefing from immediate supervisor
- ❖ Gather information on current incident status
 - Copy of IAP, face-to-face, ICS201
 - Document current situation if necessary
- ❖ Document significant activities on ICS214
- ❖ Maintain asset accountability
- ❖ Brief, assign and manage subordinates, if any
- ❖ Work safely – ensure safety
- ❖ Participate in planning process if appropriate
- ❖ Keep systems operational – verify!
- ❖ Brief replacement prior to shift change
- ❖ Demobilize as directed – when and how

The *Illinois Interoperability Field Operations Guide (I²FOG)* is a collection of technical reference material to aid Illinois Communications Unit personnel in establishing communications solutions during emergency incidents and planned events. The ability of responders to communicate in real time is critical to establishing command and control at the scene of an incident.

The *I²FOG* condenses information from the *Illinois Tactical Interoperable Communications Plan (TICP)* and is consistent with the goals identified in the *Illinois Statewide Communications Interoperability Plan (SCIP)* and the vision statement of the U.S. Department of Homeland Security (DHS), wherein emergency responders can communicate as needed, on demand, and as authorized at all levels of government. Document printed with US Homeland Security grant money.

This FOG contains nationwide and statewide interoperability channels that should be programmed into all public safety radios in the appropriate frequency band.

Thank you,

Joe Galvin
Statewide Interoperability Coordinator (SWIC)
Illinois Emergency Management Agency

IEMA Dispatch Center (24/7) **217-782-7860**

Interoperable Communications in Illinois

GENERAL RULES OF USE

NIMS / ICS / COML

Use of ICS as a component of NIMS is the standard in Illinois. This includes the designation of a Communication Unit Leader (COML) when appropriate.

Tactical Call Signs / Common Terminology

The Incident Commander/designee shall establish tactical call signs used for the incident. It is the responsibility of all users to refer to facilities and staff by the proper tactical call signs.

Plain Language (No 10-codes)

All communications shall be in plain language. Radio codes, acronyms, and abbreviations should be avoided as they may cause confusion among agencies. The reason for a request for assistance or backup should be clearly stated.

Unit Identifier

The proper identifier for any asset is the agency name followed by identifier/resource type (i.e., ISP Car 2-15 or Elgin Fire Engine 3).

Calling Another Unit

A user should call another user using the – “called unit from calling unit” format (also known as the **“hey you –it’s me” format**) using unit identifiers as shown above “ISP Car 2-15 from IEMA 3” Followed by: “IEMA 3 from ISP Car 2-15, go ahead”

INTEROPERABLE SYSTEMS

Interoperable communications in Illinois has a long and rich history. This section documents the statewide systems and channels in addition to the National Interoperable Pool (NIP) channels available for use within the State.

STARCOM21 Platform Overview

The Illinois Terrorism Taskforce (ITTF) approved STARCOM21 as an interoperable communications platform for statewide command, control, and support communications at major incidents and events, supporting established local, regional, and statewide communications systems.

STARCOM21 is used by many state, local, and private agencies for daily operability as well as for interoperability among disciplines and among jurisdictions.

Legacy Networks

There is a large presence of non-STARCOM21 interoperability resources that exists across the state that are used primarily for tactical operations

Assignment of Talkgroups are coordinated through IEMA at 217.782.7860. All encryption will utilize AES256 protocol. Only use the current SIEC Mutual Aid AES 256 keys. No other keys allowed. Talkgroups are not to be programmed in to public safety communications centers except SECURE 1, SECURE 2, and SECURE 3 which can be used for fixed location communications</p>					

STARCOM21 Interoperable Talkgroups and Rules of Use

The following is a summary list of the STARCOM21 interoperable talkgroups in Zones BA-BB.

- IESMA talkgroup – used to notify and dispatch state and local emergency management agencies as well as non-governmental organizations. **Note: This talkgroup is also the designated all-agency statewide hailing channel. Monitored by IEMA 24-hour dispatch center**
- ILEAS talkgroup – used to notify and dispatch state and local law enforcement agencies.
- MABAS talkgroup – used to notify and coordinate Fire, EMS, hazardous materials and technical rescue responses.
- Public Health talkgroup – used to notify and dispatch state and local public health agencies and hospitals
- IPWMAN talkgroup – used by the Illinois Public Works Mutual Aid Network.
- Incident 1 - 5 talkgroups (INCIDENT) – used for command/control and as directed by SWIC/COMC for state level events. Call 217.782.7860
- Zone talkgroups – used for interoperable communications within a given STARCOM21 Zone (NORTH A and B, CENTER A and B, SOUTH A and B) as directed by SWIC/COMC. Call 217.782.7860
- Region talkgroups (RGN) – May be used for interoperable communications for emerging incidents and emergencies by any users within an IEMA region without seeking permission or as

directed by SWIC/COMC. However, a courtesy notification is appreciated and assists with the overall Communications plan.

- Many EMAs monitor their Region B talkgroup, the state is promoting for use by the five National Weather Service (NWS) offices that forecast for all IL counties during times of imminent severe weather (i.e. - tornado, blizzard). The intent is for two-way communication within an impacted area, and conversely, the EMAs can report back to the NWS Office on property damage, hail size, tornado touchdowns, etc.
- The “B” talkgroup should be used first; the “A” talkgroup should be used only if a second talkgroup is necessary due to the nature of the incident or event.
- For preplanned events it is preferred that an Incident (INCIDENT 1) or STARCOM21 Zone (North A, North B) is assigned. By doing this we free up interoperable resources such as the Regional Talkgroup for an evolving emergency
- SECURE ZONE BY and BZ are optional. Assignment of Talkgroups are coordinated through IEMA at 217.782.7860. All encryption will utilize AES256 protocol. Only use the current SIEC Mutual Aid AES 256 keys. No other keys allowed. Talkgroups are not to be programmed in to public safety communications centers except SECURE 1, SECURE 2, and SECURE 3 which can be used for fixed location communications

Maps

ILLINOIS EMERGENCY MANAGEMENT AGENCY

There are eight IEMA regions in Illinois. Each IEMA Region operates from a regional office and is overseen by an IEMA Regional Coordinator.

Region 2

1325 N Galena Ave
Dixon, IL 61021-1009
Phone: 815-288-1455
Fax: 815-288-5650

Region 3

1639 Champlain St.
Ottawa, IL 61350
Phone: 815-433-7161
Fax: 815-433-7165

Region 4

9511 W Harrison St.
Des Plaines, IL 60016-1563
Phone: 847-294-4717
Fax: 847-294-4715

Region 6

2200 South Dirksen Parkway
Springfield, IL 62703-4528
Phone: 217-782-0922
Fax: 217-558-4810

Region 7

2125 South First St Ste 309
Champaign, IL 61820
Phone: 217-278-3535
Fax: 217-352-1316

Region 8

10045 Bunkum Road
Fairview Heights, IL 62208-1703
Phone: 618-394-2233
Fax: 618-394-2239

Region 9

112 W Sixth St
Flora, IL 62839-1401
Phone: 618-662-4474
Fax: 618-662-4448

Region 11

2309 W Main St., Ste 110
Marion, IL 62959-1196
Phone: 618-997-5847
Fax: 618-997-2642

Communication Unit

Communications Coordinator (COMC) –The COMC coordinates communications between and among dispatch centers and incident communication units within one or more affected areas. The COMC reviews incident communication plans to assure that communications channels/talkgroups are allocated and used effectively. Locally, the jurisdictional dispatch center supervisor or dispatcher will act as the COMC when necessary. Communications Coordinators may be located at the county, area, and state levels. *While not structurally in the Communication Unit, the COMC is the liaison among multiple COMLs, dispatch centers, and other agencies for allocating critical/scarce resources and deconflicting communications plans.*

For statewide activations the COMC is the Communications Officer sitting in the State Emergency Operations Center (SEOC).

Communications Unit Leader (COML) – Manages the technical and operational aspects of the Communications function during an incident or event. Develops Incident Command System (ICS) Form 205 Incident Radio Communications Plan and supervises the Communication Unit.

Technical Specialist (THSP) – Allows for the incorporation of personnel who may not be formally certified in any specific NIMS/ICS position. THSPs may include Local Agency Radio Technicians (as opposed to the COMT), Telephone Specialists, Gateway Specialists, Data/IT Specialists, and/or Cache Radio Specialists.

Communications Technician (COMT) – Deploys advanced equipment and keeps it operational throughout the incident/event.

Incident Communications Center Manager (INCM) –Supervises the operational aspects of the Incident Communications Center (ICC). During an incident, the ICC is established to handle incident-related communications in order to separate that traffic from the day-to-day activities of the dispatch center. The ICC is typically located near the Incident Command Post (ICP) in a fixed site or mobile communications center.

Radio Operator (RADO) –Performs Telecommunicator duties at the ICC and is responsible for documenting incoming radio and telephone messages. RADOs may also function as message runners

when necessary. Incident Dispatchers, Tactical Dispatchers, or Telecommunicator Emergency Response Taskforce (TERT) team members are used as RADOs.

Auxiliary Communications (AUXCOMM) – Auxiliary Emergency Communications (Aux Comm.) - Auxiliary Emergency Communications (also known as AEC or AUXCOMM) provides supplementary and backup communications utilizing the services of volunteer communicators. AEC operates as part of the Communications Unit. AEC draws its resources from the licensed Amateur Radio operators within the state and has the capability to provide both intrastate and interstate AEC mutual aid

COMMUNICATION UNIT LEADER POSITION CHECKLIST

Note that some tasks are one-time actions while others are ongoing or repeated during the incident. The term “Communication” may refer to radio systems, data/internet systems, or telephone systems.

1. Obtain briefing from appropriate ICS staff member (your supervisor)
2. Assess communications systems/frequencies in use – document if not already done
3. Organize and staff Communications Unit as appropriate:
 - Assign Incident Communications Center Manager (INCM), if necessary
 - Order and assign adequate staff (COMTs, RADOs, THSPs)
 - Brief incoming staff on current activities, duties, responsibilities and procedures
4. Establish safety procedures for personnel and ensure compliance
5. Participate in planning cycle meetings and briefings
6. Advise on communications capabilities/limitations
7. Coordinate all communication systems use with local, area or state Communications Coordinator (COMC) as appropriate
8. Develop/implement effective communications flow to/from the Incident Command Post (ICP)
9. Assess ICP telephone needs / request additional lines if necessary
10. Prepare and implement Incident Radio Communications Plan (ICS 205):
 - Obtain current organizational chart (ICS 203 or ICS 207)

- Determine most hazardous tactical activity; ensure adequate communications
 - Make communications assignments for all other Operations Section elements
 - Determine Command and General Staff communications needs
 - Determine support (Logistics, Planning and Admin Sections) communications needs
 - Establish specific procedures for use of all communications equipment
11. Ensure communications data on ICS 204 and ICS 206 is correct
 12. Document cellular phones and pagers in Incident Communications Plan (ICS 205T), if appropriate:
 - Determine specific organizational elements to be assigned telephones
 - Identify all facilities/locations needing telephone communications, identify/document phone numbers
 - Determine which phones/numbers should be used by what personnel and for what purpose. Assign specific telephone numbers for **incoming** calls, and report these numbers to staff and off-site parties
 - **Do Not publicize OUTGOING phone lines**
 13. Activate, serve as contact point, integrate and supervise auxiliary communications units (AUXCOMM)
 14. Ensure use of Communications Logs (ICS 309) or use your CAD for data entry of radio and telephone traffic
 15. Determine need and availability of additional nets and systems:
 - Obtain copy of local Tactical Interoperable Communications Plan (TICP)

- Order resources as appropriate after approval by Section Chief
16. Ensure that communications equipment operation is monitored continuously
 17. Document malfunctioning communications equipment, facilitate repair
 18. Establish and maintain communications equipment accountability system
 19. Provide technical information, as required, on:
 - Adequacy of communications system currently in use
 - Geographic limitation on communications equipment
 - Equipment capabilities
 - Amount and types of equipment available
 - Anticipated problems in the use of communications
 20. Estimate Communications Unit needs for expected operations; order relief personnel
 21. Provide briefing to relief on current activities and unusual situations
 22. Document all activity on Unit Log (ICS 214)

INCIDENT COMMAND SYSTEM PLANNING FORMS

This section contains descriptions of common ICS forms that are used in communications planning or have communications information on them that is provided by the COML.

The only form developed by the Communication Unit that is included in the Incident Action Plan (IAP) is the ICS 205, Incident Radio Communications Plan. The other forms are used to develop the ICS 205 and are kept within the Communications Unit for reference. ICS 204, Field Assignment Form(s) and ICS 206, Incident Medical Plan contain communication data and should be verified/validated by the COML before publication.

Illinois-specific ICS forms in Microsoft Excel format are available from the Illinois SWIC upon email request to SWIC@illinois.gov

FEMA has All-Hazards ICS forms at http://www.fema.gov/pdf/emergency/nims/ics_forms_2010.pdf

ICS 201 - Incident Briefing

Purpose: The Incident Briefing form provides the basic information regarding the incident situation and resources allocated to the incident.

Preparation: The briefing form is prepared by field command for presentation to the IMT along with a more detailed oral briefing.

ICS 203 - Organization Assignment List

Purpose: The Organization Assignment List provides ICS personnel with information on the units that are currently activated and the names of personnel staffing each position/unit. It is used to complete the ICS 207.

Preparation: The Resources Unit prepares and maintains this list under the direction of the Planning Section Chief.

ICS 204 - Field Assignment Form

Purpose: The Field Assignment form is used to inform Operations Section personnel of their incident assignments.

Preparation: The Field Assignment form is normally prepared under direction of the Planning Section Chief using guidance from the ICS 202, ICS 215, and the Operations Section Chief. Radio frequencies listed on the ICS 204 shall be coordinated and confirmed by the COML.

ICS 205 - Incident Radio Communications Plan

Purpose: The Incident Radio Communications Plan provides, in one location, information on the assignments for all communications equipment for each operational period. Information from the ICS 205 on frequency assignments can be placed on the appropriate Field Assignment Form (ICS 204) and the Incident Medical Plan (ICS 206).

Preparation: The Incident Radio Communications Plan is prepared by the Communications Unit Leader.

ICS 206 - Medical Plan

Purpose: The Medical Plan provides information on incident medical aid stations, transportation services, hospitals, and emergency medical procedures.

Preparation: The Medical Plan is prepared by the Medical Unit Leader and reviewed by the Safety Officer. Radio frequency and telephone numbers listed on the ICS 206 shall be coordinated and confirmed by the COML.

ICS 207 - Incident Organization Chart

Purpose: The Incident Organization Chart provides information on the response organization and personnel staffing.

Preparation: The list is prepared and maintained by the Resource Unit under the direction of the Planning Section Chief.

Note: An organization chart may be completed any time the number of personnel assigned to the incident increases or decreases or a change in assignment occurs.

ICS 211 - Incident Check-In List

Purpose: Personnel and equipment arriving at the incident can check in at various incident locations. Check-in consists of reporting specific information, which is recorded on the form.

Preparation: The Check-In List is initiated at a number of incident locations including staging areas, base camps, helibases, and ICP.

Managers at these locations record the information and give it to the Resources Unit as soon as possible.

ICS 213 - General Message

The General Message form is used by

- Incident dispatchers to record incoming messages which cannot be orally transmitted to the intended recipients.
- EOC and other incident personnel to transmit messages via radio or telephone to the addressee.
- Incident personnel to send any message or notification which requires hard-copy delivery to other incident personnel.

Preparation: The General Message form may be initiated by incident dispatchers and any other personnel on an incident. Two copies should be sent and one copy retained by the person who initiates the message.

ICS 214 - Unit Log

Purpose: The Unit Log is used to record details of unit activity including specialized team activity (e.g., Strike Team). These Unit Logs can provide a basic reference from which to extract information for inclusion in an after-action report.

Preparation: A Unit Log is initiated and maintained by Command and General Staff members, field command, and Unit Leaders. Completed logs are forwarded to supervisors, who provide copies to the Documentation Unit. Each Team member should complete an ICS 214

ICS 217A - Communications Resource Availability

Purpose: The Communications Resource Availability Worksheet (ICS 217A) is a template that users may fill out prior to an incident. An agency's interoperable channels and/or talkgroups can be entered on the form, thereby enabling a COML to have the technical information readily available to complete an Incident Radio Communications Plan (ICS 205).

Preparation: The Communications Resource Availability Worksheet is prepared by a COMC or COML in an administrative setting prior to an incident. The ICS 217A provides a standardized template for the presentation of channels or talkgroups that might be considered for use by appropriate personnel during an incident. ICS 217A is duplicated and given to all appropriate Communications Unit personnel who are authorized to use the agency's resources during an incident. This may include COMLs, COMTs, THSPs, etc.

ICS 309 - Communications Log

Purpose: The Communications Log (ICS 309) is used to document radio traffic handled by the ICC. It includes the date and time of the radio traffic as well as the source and destination and a summary of the content of the radio traffic.

Preparation: The Communications Log is maintained by the RADO on an ongoing basis as radio traffic is handled.

EMERGENCY SUPPORT FUNCTIONS (ESF)

ESF #	Function	ESF#	Function
1	Transportation	9	Search and Rescue
2	Communications	10	Oil and Hazardous Materials Response
3	Public Works and Engineering	11	Agriculture and Natural Resources
4	Firefighting	12	Energy
5	Emergency Management	13	Public Safety and Security
6	Mass Care, Housing and Human Services	14	Long Term Community Recovery
7	Resource Support	15	External Affairs
8	Public Health and Medical Services		

Incident Prioritization

PRIORITIZATION AND SHARED USE OF INTEROPERABILITY ASSETS

In response to events or incidents which cross over agency responsibilities, there will potentially be competing demands and priorities for the use of interoperable communications assets.

An Incident Commander, in cooperation with assisting agencies, will have the authority to request the use of interoperability assets. The Incident Commander, Logistic Section Chief, or Communication Unit Leader (COML), when designated, will direct further coordination and delegation of the interoperable communications assets assigned to the event or incident in question.

Agencies should judiciously activate needed interoperable assets both to respond effectively to the event and/or incident and to minimize any negative impact on surrounding agencies or jurisdictions. Specifically, interoperable communications should be attempted with the following order of deployment in mind (subject to the involved agencies' disciplines/responsibilities and the nature of the event/incident).

1. Leverage face-to-face communications wherever appropriate. For example, co-location of all command and general staff at the Incident Command Post (ICP) provides the best direct communications and reduces the demand on interoperability resources.

2. Employ local communications assets until those assets become taxed or inadequate based on the nature and/or scope of the incident.
3. Users of the STARCOM21 platform can utilize it to establish interoperable communications on common talkgroups.
4. If response agencies operate on disparate systems, use shared or mutual aid channels to establish interoperable communications.
5. If response agencies do not share systems or channels, use a gateway solution to establish interoperable communications.
6. Where interoperable communications cannot otherwise be established between response agencies, use swap or cache radios to establish communications for responders.
7. Use non-public safety common carrier communications systems.
8. If no other method of interoperability can be established, relay communications through staff members (runners).

When the same resources are requested for two or more incidents, resource assignments should be based on the priority levels listed below (in decreasing priority; i.e. lower number indicates a higher priority).

1. Incidents where imminent danger exists to life or property
2. Disasters, large scale incidents, or extreme emergencies requiring mutual aid or interagency communications

3. Incidents requiring the response of multiple agencies
4. Pre-planned events requiring mutual aid or interagency communications
5. Incidents involving a single agency where supplemental communications are needed for agency use
6. Drills, tests, and exercises

In the event of multiple simultaneous incidents within the same priority level, the resources should be allocated with the following principles in mind.

1. Incidents with the greatest level of exigency (e.g., greater threat to life or property, more immediate need, etc.) have priority over less exigent incidents.
2. Agencies with single/limited interoperability options have priority use of those options over agencies with multiple interoperability options.
3. When possible, agencies already using an interoperability asset during an incident or event should not be redirected to another resource.

Statewide Interoperable Channels and Talkgroups

NOTE: All transmit and receive frequencies are listed as they would be programmed into portable, mobile or control point radios. Programming of repeaters MUST reverse the “receive” and “transmit” frequencies and tones shown in the tables below.

Illinois VHF Low Band

Statewide Shared Channels – VHF Low Band				
All channels are wideband				
FREQUENCY		TONE RX/TX	ELIGIBILITY/PRIMARY USE	NAME
RECEIVE	TRANSMIT			
45.2800	45.2800	103.5	Emergency Management Local Command and Control	IEMA-2

*Assignment of ANY Interoperable Talkgroups (above) are coordinated through IEMA at 217.782.7860. All encryption will utilize AES256 protocol.

**Region (RGN) talkgroups – May be used for interoperable communications by any users within an IEMA region without seeking permission or as directed by SWIC/COMC. Primary use will be for emerging incidents; planned events should schedule talkgroups with IEMA ahead of time. The “B” talkgroup should be used first; the “A” talkgroup should be used only if a second talkgroup is necessary due to the nature of the incident.

*** SECURE – Encrypted Talkgroups are optional. Only use the current SIEC Mutual Aid AES 256 keys. No other keys allowed. The above information will only allow you how to program the radio properly, to load and activate the encryption key individuals will need the key loaded from a State-trusted key holder. Talkgroups are not to be programmed in to public safety communications centers except SECURE 1, SECURE 2, and SECURE 3 which can be used for fixed location communications

Nationwide Interoperable Channels

NOTE: All transmit and receive frequencies are listed as they would be programmed into portable, mobile or control point radios.

Nationwide VHF Low Band

RECEIVE	TRANSMIT			

*CTCSS Tones – Default operation should be carrier squelch receive (CSQ), CTCSS Transmit. If the user can enable/disable without programming the radio, the indicated CTCSS tone also could be programmed for receive, and the user instructed how and when to enable/disable.

** NOTE: Some of the National Interop Pool (NIP) channels has the same frequency as Illinois interoperable resources but uses a different CTCSS tone

¹ To preserve Direct channel availability, designate a primary and secondary repeater pair. For example: If one transportable repeater is used, it should be on VTAC36 (VTAC11/VTAC14 paired). If a second is needed, it should be on VTAC37 (VTAC12/VTAC13 paired) with the understanding that there would remain no available Direct VTAC channels. VTAC11 and/or VTAC12 could be used for “talk-around” in either or both cases, at the risk of being interfered with by repeater users who can’t hear the talk-around transmissions. Repeater use should have no priority over Direct use of the involved channel(s). It is strongly recommended that tactical repeaters be activated only when called for by a COML as documented on ICS 205 for an incident.

² VTAC35/38 (VTAC13/VTAC14 paired) should be used as a repeater pair only in Puerto Rico and the US Virgin Islands where VTAC11 and VTAC12 are unavailable

³ VTAC36-38 are preferred; VTAC 33-35 only use when necessary

Federal VHF IR Incident Response

Federal VHF IR				
FREQUENCY		TONE RX/TX	ELIGIBILITY PRIMARY USE	NAME
RECEIVE	TRANSMIT

*CTCSS Tones – Default operation should be carrier squelch receive (CSQ), CTCSS Transmit. If the user can enable/disable without programming the radio, the indicated CTCSS tone also could be programmed for receive, and the user instructed how and when to enable/disable.

Auxiliary Communications (AUXCOMM)

AUXCOMM is a volunteer organization of licensed amateur radio operators registered with the county or local emergency management organization to provide auxiliary emergency communications on behalf of local, state or federal government. Each local AUXCOMM group is administered by a local government agency responsible for disaster services.

AMATEUR RADIO EMERGENCY SERVICE (ARES)

A program of the American Radio Relay League (ARRL). ARES consists of amateur radio operators who volunteer to provide emergency communications when needed. ARES groups are generally structured at the county level and often closely aligned with emergency management agencies.

RADIO AMATEUR CIVIL EMERGENCY SERVICE (RACES)

Although the FCC is responsible for the creation and regulation of RACES, Federal Emergency Management Administration (FEMA) is responsible for operations. As part of that plan, counties are encouraged to develop a local AUXCOMM program that would include a RACES component in accordance with the state plan. RACES may be only activated by the President of the United States. The activation will be in accordance with an approved civil defense communications plan, per FCC Rules.

STATEWIDE AUXCOMM FREQUENCIES

Band	RX Freq.	TX Freq.	Mode	Notes
80m	3.9050	3.9050	LSB	Primary
40m	7.2300	7.2300	LSB	Secondary

2m	147.5250	147.5250	WBFM	IL2B
2m	147.5700	147.5700	WBFM	IL2C
70cm	446.0000	446.0000	WBFM	ILUHFA Nationwide Calling
70cm	446.4000	446.4000	WBFM	ILUHFB
70cm	446.7000	446.7000	WBFM	ILUHFC
Note: Operations on amateur radio frequencies requires an appropriately licensed amateur radio operator. Refer to FCC Rules, Part 97, or, the American Radio Relay League for more detailed information				

Interoperability Assets

INTEROPERABILITY REPEATERS

Some jurisdictions have deployed radio repeaters that provide interoperable communications allowing efficient coordination of first responders during an incident or planned event. These repeaters may be in fixed positions using permanent towers; or they may be transportable, allowing for deployment at or near the incident scene.

Proper operation of repeater stations is necessary for the efficient use of the interoperability channels, especially in minimizing and eliminating potential interference.

Best Practice Summary

- Only the minimum number of calling channel repeaters should be in “Repeater ON” mode across the region.
- Repeaters on the tactical frequencies should always be in “Repeater OFF” mode, unless they are actually in use.
- Agencies should periodically check their repeaters to make sure they are in “Repeater OFF” mode to prevent interference to other agencies.
- Having multiple repeaters active on the same frequency in the same area causes the mobile and portable radio users to hear interference from multiple repeaters.
- Dispatch centers using direct repeater control normally cannot hear other active repeaters on their consoles unless they also have a monitor radio on that channel. They will hear the input

channel from any mobile, portable, or control stations from any agency within range of their repeaters.

- Calling Channels - Many agencies monitor the calling channels for their area on their own repeaters. Tactical Channels are used for incident communications.
- All tactical repeaters will be set to “Repeater Off”, or equivalent, unless needed for an incident or event in that area.
- If possible, configure tactical repeaters to default to “Repeater OFF” in the event of a power cycle or other disruption.
- In general, the tactical channel repeater that is closest to the incident and provides the minimum effective coverage area for the incident should be used. This allows greater reuse of frequencies for multiple incidents across the region.

Requesting a Repeater - The incident COML/COMC or their designee determines when a situation exists that requires the use of a repeater and notifies the appropriate dispatch center. The COML or COMC determines what repeater are available for use, identifies a specific repeater, activates that repeater, and coordinates the repeater deployment with the requesting agency Incident Commander or their designee.

*All repeaters can be reprogrammed by MABAS Communications personnel

GATEWAYS

Gateway / Cross-Band Device Operation

Gateways interconnect channels of different systems (whether on different bands, channels, or modes), allowing first responders to use their existing radios and channels to communicate with users outside their agency or radio system. Use of designated interoperability channels is preferred over the use of any agency's primary operational channels or talkgroups.

A Communications Unit Leader (COML) or Incident Commander (IC) must be aware that multiple gateway activations in support of an incident can result in interference. Interference issues are best resolved by the technical support personnel assigned to the gateways.

Whenever possible, patches of one talkgroup to another talkgroup on the same system or platform should be accomplished at the console level to minimize channel loading.

Requesting a Gateway - The incident COML/COMC or their designee determines when a situation exists that requires the use of a radio gateway and notifies the appropriate dispatch center. The COML or COMC determines what gateways are available for use, identifies a specific gateway, activates that gateway, and coordinates the gateway deployment with the requesting agency Incident Commander or their designee.

RADIO CACHES

Cache radios refer to maintaining a cache of standby radios that can be deployed to support incidents (spare radio(s) used as operational replacement for day-to-day use are NOT cache radios). Cache radios allow all responders to use common, compatible equipment during an incident.

Requesting a Cache - The incident COML/COMC or their designee determines when a situation exists that requires the use of a radio cache and notifies the appropriate dispatch center. The COML or COMC determines what radio caches are available for use, identifies a specific cache, activates that cache, and coordinates the cache deployment with the requesting agency Incident Commander or their designee.

General Reference Information

STANDARD PHONETIC ALPHABET

The phonetic alphabet (shown below) is a standard international procedure for transmission of difficult to pronounce words or place names. The excess use of the phonetic alphabet wastes time on radio networks. Clarification of words can very often be made using plain English spelling without the need to resort to phonetic spelling.

A	Alfa	H	Hotel	O	Oscar	V	Victor
B	Bravo	I	India	P	Papa	W	Whiskey
C	Charlie	J	Juliet	Q	Quebec	X	X-ray
D	Delta	K	Kilo	R	Romeo	Y	Yankee
E	Echo	L	Lima	S	Sierra	Z	Zulu
F	Foxtrot	M	Mike	T	Tango		
G	Golf	N	November	U	Uniform

NAC – Network Access Codes

NAC – NETWORK ACCESS CODES	
\$293	Default NAC – National
\$68	Default NAC – Federal LE
\$F7E	Receiver will un-squelch with any incoming NAC
\$F7F	A repeater receiver set for this NAC will allow all incoming signals and the repeater transmitter will retransmit the received NAC.
TGID – TALKGROUP ID	
\$0001	Default
\$0000	No one, talkgroup with no users - used for individual call
\$FFFF	Talkgroup which includes everyone
UNIT ID	
\$000000	No one – never associated with a radio unit
\$000001-\$98767F	For general use
\$989680-\$FFFFFE	For talkgroup use or other special purposes
\$FFFFFF	Designates everyone – used when implementing a group call with a TGID3

GLOSSARY

Acronym	Definition
CASM	Communication Assets Survey and Mapping
COMC	Communications Coordinator
COML	Communications Unit Leader
COMT	Communications Technician

IL TERT	Illinois Telecommunications Emergency Response Taskforce
INCM	Incident Communications Center Manager
ITECS	Illinois Transportable Emergency Communications System
MCC	Mobile Communication Center
MHz	Megahertz
NIP	National Interoperable Pool
NIMS	National Incident Management System
RADO	Radio Operator
SCIP	Statewide Communications Interoperability Plan
SEOC	State Emergency Operation Center
SIEC	Statewide Interoperability Executive Committee
SOP	Standard Operating Procedure
SOW	Site On Wheels (STARCOM21)
STR	Strategic Technology Reserves

Acronym	Definition
SWIC	Statewide Interoperability Coordinator
THSP	Technical Specialist
TICP	Tactical Interoperable Communications Plan
TST	Technology Support Teams
UAC	Unified Area Command vehicle
UCP	Unified Command Post (vehicle)

General Rules of Use for Communications Equipment or Channels

- ❖ Shall only be used for official business or emergency communications.
- ❖ Shall be consistent with Federal Communications Commission (FCC) or National Telecommunications and Information Administration (NTIA) Rules.
- ❖ Use during a Type 3, 2, or 1 incident shall be authorized by the COML of the incident.
- ❖ Verify that the interoperability channel is clear before transmitting to avoid interfering with the communications of another user.
- ❖ Rules and Guidelines of interoperable channels (i.e., ISPERN, IREACH, IFERN, etc.) will be followed when using those channels
- ❖ Only users actively participating in the incident or authorized by a COML or COMC should monitor or transmit on a given talkgroup.
- ❖ Scanning across multiple channels is to be avoided when using interoperable communications.
- ❖ ALL voice radio communications are to be brief and concise.
- ❖ No obscene, indecent, or profane language shall be used on any channel.
- ❖ No use of nicknames, slang, or Citizens Band (CB) type handles shall be used on any interoperable channels.
- ❖ The appropriate authority shall immediately deal with unauthorized use of channels or equipment.
- ❖ Specific rules of use for specialized equipment must be known and followed when that equipment is put in use.
- ❖ Encryption shall not be used at any time on any state or national interoperability channels or talkgroups (with the exception of the new encrypted zones as part of the Interoperable Template (BY & BZ).
- ❖ Ground to Air Communications - shall be coordinated with the COMC/COML. Airborne use of interoperable channels shall receive prior authorization from COMC/COML.

Interoperable Communications “Watch Out” Situations

- ❖ Inadequate or no communication with crew members or supervisor.
- ❖ Users unfamiliar with radio system(s) or assigned radio functionality.
- ❖ Organizations in the system do not use the same vocabulary.
- ❖ Multiple conversations on the same talkgroup or channel.
- ❖ Unable to communicate critical information due to radio congestion.
- ❖ High level of background noise (i.e. wind, generators, and power tools).
- ❖ Working in the deep interior of a building, parking garage, or underground.
- ❖ A single Communications Unit Leader has not been designated.
- ❖ Instructions and assignments for Comm Unit are not clear.
- ❖ Inadequate number of tactical channels available or assigned.
- ❖ Incident is using radio frequencies in more than one radio band.
- ❖ Multiple agencies performing radio programming at the incident.
- ❖ Different radio bands being used via console or gateway patches.
Gateways must be monitored for problems such as “stuck keys”, intermodulation, etc.
- ❖ Multiple mobile gateways available at the incident.
- ❖ Mobile gateway devices being used in a strategic (wide-area) rather than tactical (local) environment.
- ❖ Dispatch to dispatch channel patching.
