

Specialist Modular Scaffold

At SMS “Specialist” is more than just part of our name. Our portfolio of completed projects proves our ability to deliver access solutions that meet even the most complex and demanding requirements. With the expertise, resources, and determination to adapt to your specific needs, we ensure that every project is executed with precision and reliability. Choosing us means partnering with a team that thrives on challenges and consistently delivers results that others cannot.

Hanging Scaffolds

Scaffold that can't be based from floor level require bespoke planning and design. Our project at the **Hilton Hotel** enabled our client to carry out maintenance to the perimeter flat roof and balconies from a hanging access platform due to planning constraints of erecting from ground level.

Calum Phillips, MPS Contracts: “It was great working with you Louis and your team on this Project. After speaking to several other supposedly specialist scaffold companies none could deliver what you managed to achieve. Work was completed on time and on budget and I look forward to working with you again.”

Freestanding edge protection

These projects require considered planning to comply with the scope of works, due to the high degree of incidence from falls at height & falls through fragile roofs. Even more care is required on industrial units, and certain commercial properties where tying into the facade is not viable, so designed buttresses and kentledge is key to stabilising the scaffold as shown on our **TRIDENT PARK** Refurbishment project.

External Scaffold inspection:

“The Scaffolders, their admin and the Scaffold that has been constructed for the task is in complete contrast to what has been seen at other A&N Lewis Sites and A&N Lewis deserve great credit for using the services of SMS”.

Encapsulation Scaffolds

Ensuring that working environments are fully encapsulated is critical to safeguarding the site perimeter, the public, and the surrounding environment. Enclosed scaffold systems are specifically designed to contain dust, debris, and airborne contaminants, maintaining compliance with health and safety standards. Illustrated here is a typical asbestos enclosure, demonstrating how controlled containment enables safe execution of works in sensitive conditions.

Barry Rail Depot enclosure, increasing maintenance capacity for the depot over busy periods.

The Grand Pavilion, Porthcawl, enclosure allowed our client to blast the stone facade, while containing all debris.

Public Highways

When undertaking projects that extend onto the public highway, we prioritise minimising disruption to the community while ensuring the highest standards of public safety once work commences. Close collaboration with Local Highways teams, combined with meticulous planning, underscores our commitment to delivering these projects with professionalism and care.

The Old Bank development in the heart of Cardiff Bay's bustling tourist hub.

Burnham-On-Sea, High St, emergency repairs within the busy shopping precinct.

Network Rail Office, facade repairs on the main road leading to Cardiff Central Railway Station. High footfall, high risk yet executed effectively.

Temporary Roofs

We can ensure uninterrupted project momentum regardless of weather conditions. By integrating advanced facade cladding with specialized roofing systems, we provide comprehensive weatherproofing to safeguard your site against environmental delays.

The Croft, Tenby. Redevelopment of the former Croft Hotel. Our largest roof project faced and overcame the Red Weather Warnings earlier this year. Battling off gusts of 80mph on the West Wales coast!

The Roman Museum, Caerleon. Ensuring watertight protection for historical artifacts during the main building's refurbishment.

RC School, Portbury. A huge 28m span roof allowed the full removal and roof replacement while ensuring the school classrooms below were protected from the rain during this 6 week programme.

Heritage & Conservation

Attention to detail is paramount when working on Listed buildings. Each project is governed by its own set of regulations and requirements, and our meticulous planning ensures clients have complete peace of mind when scaffolding is erected around such distinguished and historically significant structures.

Grade 1 Listed Estate, Mid Wales. A Beautifully kept neo-classical property requiring access for extensive roof repairs. Many of the antiquities were removed however the 200 year old paintings had to be carefully worked around!

Infrastructure

We specialise in planning and delivering top-quality solutions for complex infrastructure projects, including those that span rivers, rail networks, and major roadways.

Rhondda Cynon Taff. Multiple river crossings for bridge replacements along public footpaths. Fixing to existing stone facades and dry basing from temporary dry docks.

Cardiff Rail Depot. Access along tracks for essential maintenance on train engine bays and roof top power units.

Commercial

At the core of our business are projects retaining our commitment to building strong relationships and collaborating with long-standing contractors across a wide range of new commercial developments. We deliver cost-effective and efficient scaffolding solutions designed to support project programmes and ensure the successful achievement of key deliverables.

The Mill Development. A Multi block apartment development requiring high volume of scaffold erected in quick succession with the progressive works onsite.

Solar Installation: Commercial facilities are upgrading their energy systems to incorporate solar photovoltaic (PV) technology. Multiple projects are underway, with comprehensive measures in place to ensure safe access and edge protection during installation.

Residential

Our residential projects are built on trust, collaboration, and a commitment to quality. By working closely with homeowners and experienced contractors, we provide scaffolding solutions that are safe, reliable, and designed to fit seamlessly into the surrounding environment. Every structure is planned with care to minimise disruption, protect property, and keep programmes on track — ensuring families can feel confident throughout the build process.
