Xfinity Speed Test

Let's Test The Speed To Your Devices

Measure the speed from our servers to this device. Results are often lower than your plan speed due to WiFi conditions and device capabilities.

Start Test

More About Speed

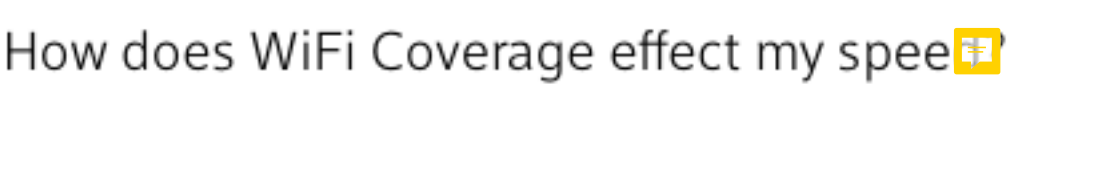

What does this test measure?

This test does not measure the speed delivered to your home (AKA the speed you pay for in your plan). This test looks at how much speed is reaching your device. Depending on how much you pay for, a certain amount of speed is delivered to your home (via your Gateway or modem) which in then shared among your devices.

[Device Speed VS Plan Speed](#)

How does WiFi Coverage effect my speed?

As you move away from your router, the strength of your wifi signal diminishes. Wifi can also be affected by the placement of your gateway. Having a strong connection is important for getting the most speed out of your device.

[Tips To Improve Coverage](#)

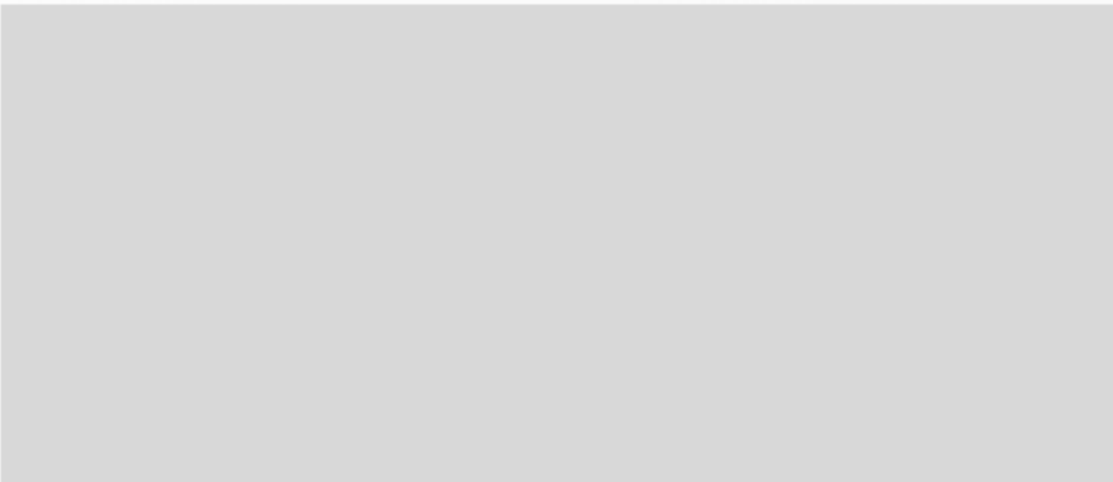

How doe's my device effect my speed?

Every device that uses the internet has its own maximum speed, which vary widely depending on make, model and year of the device. You wouldnt expect the same speed from a racecar as you would from your minivan, your devices are the same way.

[Compare Device Speeds](#)

How do other devices on my network effect my speed?

The speed sent to your home is distributed among all of your devices. If there are too many devices on your network, this could slow down speeds to all of them.

[How Much Speed Do I Need In My Plan?](#)

How much speed does my device need?

Depending on the activity your device is performing, you will need a different speed for it to operate smoothly.

Activity	Speed Required
Send / Receive Email	150-500 Mbps
Browse the Internet	75-150 Mbps
Stream HD Video	25 Mbps
Stream 4K Video	150-500 Mbps
Speedy Downloads	75-150 Mbps
Stream HD Video	25 Mbps
