

STEAM JANUARY

NEWSLETTER

Happy January, TLJA Families,

This month, there is no assigned letter focus in STEAM. At this time of the year, I take time to reflect on what each grade has accomplished so far. Using that information, I design projects tailored to each grade level that will support growth and strengthen skills in areas where students may have struggled during the past six months. Overall, I look forward to seeing growth during the completion of these projects.

Ms. Bennett

Kinder

Kinder will be focusing on math this month. I chose math because kinders are beginning to learn about 2D vs. 3D shapes in their classroom. We will be doing various projects that reinforces their learning.

First

First graders will be focusing on engineering and technology. Their projects will focus on building attachments for BeeBot that will help him solve problems. For example, creating snowplows.

Second

Second graders will be focusing on engineering and math. Their projects will focus on building and measurement. The theme of these projects are snow.

Third & Fifth

Third and fifth graders will be focusing on engineering and math. Their projects will focus on building and measurement. The theme of these projects are winter sports.

Fourth

Fourth graders will be focusing on art, but more specifically theater. Talking and performing in front of your peers can be scary. The goal of this project is to build their confidence in public speaking.
