

Key Principles

LEVANTA PLUS is a system that **combines picosecond and nanosecond emissions in 2 wavelengths**: 532 and 1064 nm.

4 different modalities:

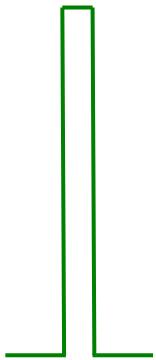

1. Picosecond
2. Nanosecond (QS)
3. DoublePulse
4. ThermalPulse

The different shapes and sizes of the **13 handpieces' spots and the 4 emission modalities** make LEVANTA PLUS is one of the most flexible laser system on the market to effectively treat cutaneous imperfections caused by ageing with minimal contraindication.

Extremely Flexible Laser Emission

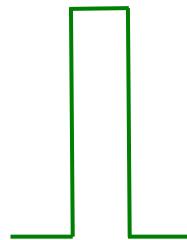

LEVANTA
PLUS

Pico pulse:

One intense very short pulse (< 500 ps) with very high peak power

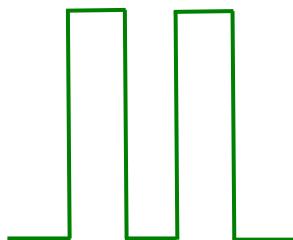

Skin rejuvenation, toning, scars, pigmented lesions, tattoos

Nano pulse:

One single intense short pulse (6 ns) with high peak power

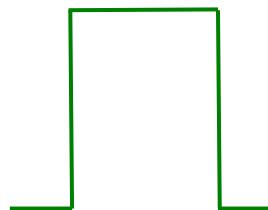

Tattoos, pigmented lesions, skin rejuvenation

Double pulse:

Two pulses of 6 ns delayed by 0.15 ms

Pigmented lesions, skin rejuvenation

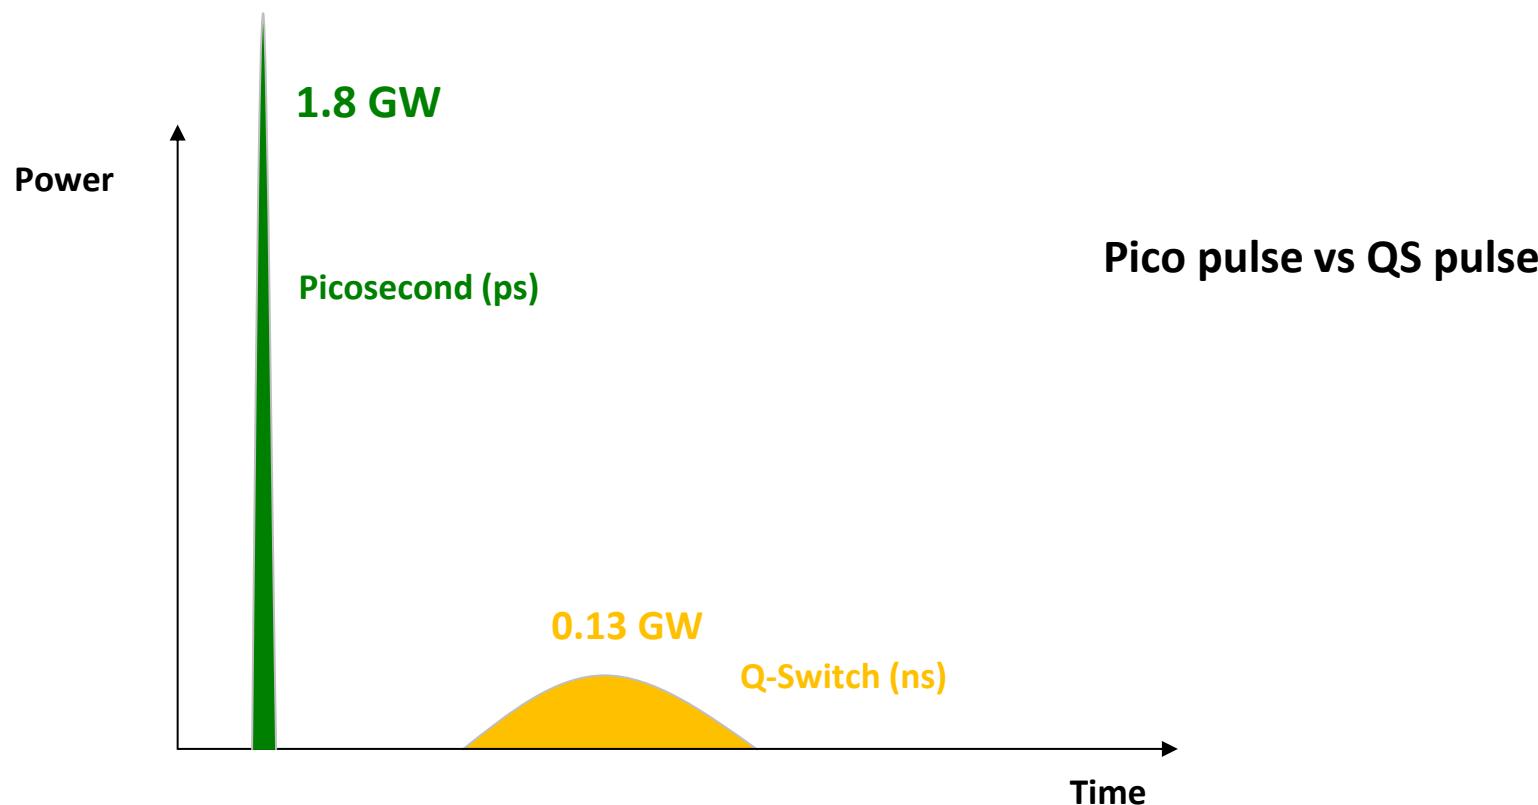

Thermal pulse:

One pulse with longer pulse duration (300 µs)

Skin rejuvenation, onychomycosis, inflammatory acne

: Q-Switched & Pico Emission

	Energy per Pulse	Pulse Length	Power
QS Pulse	800 mJ	6 ns	0.13 GW
Pico Pulse	800 mJ	450 ps	1.8 GW

Available Laser Handpieces

LEVANIA
PLUS

Round Handpieces: 4.5, 7.5mm, 9mm

Square Handpieces: 3mm, 4mm, 5mm

Fractional Handpiece: 8mm

Round flat-top handpieces with ***Holographic Optical Element (HOE)*** are mainly designed for pigmented lesions and for facial treatments.

Revive Regenerative

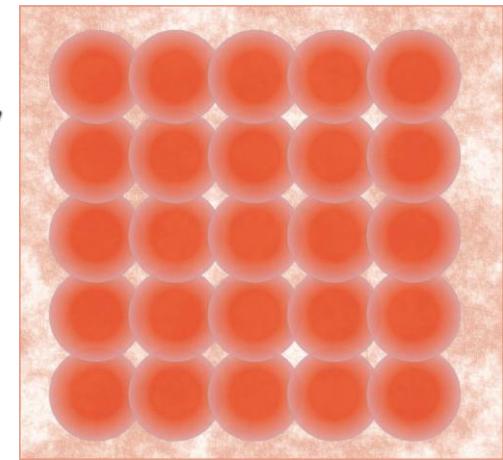

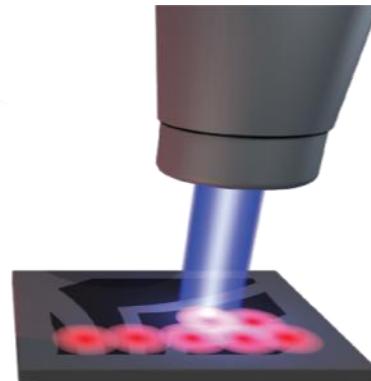

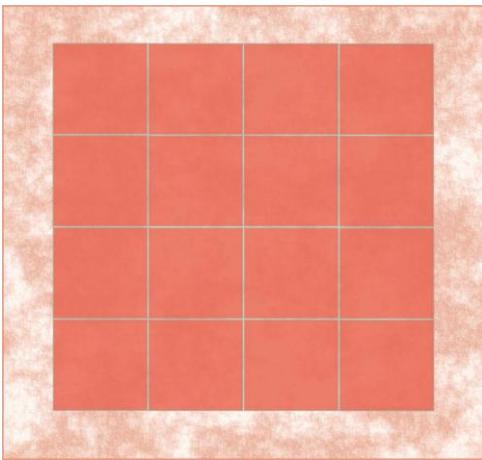

To change the handpiece, the operator can make easy operations without the need of any tool. The spot sizes and shapes are automatically detected. NO necessity of turning off the device during this operation

Square Laser Handpiece

LEVANTA
PLUS

The best choice for tattoo treatment!

With a square spot the treatment area is covered in a homogeneous way while with a round shape it is necessary to overlap spots to cover the whole treatment surface.

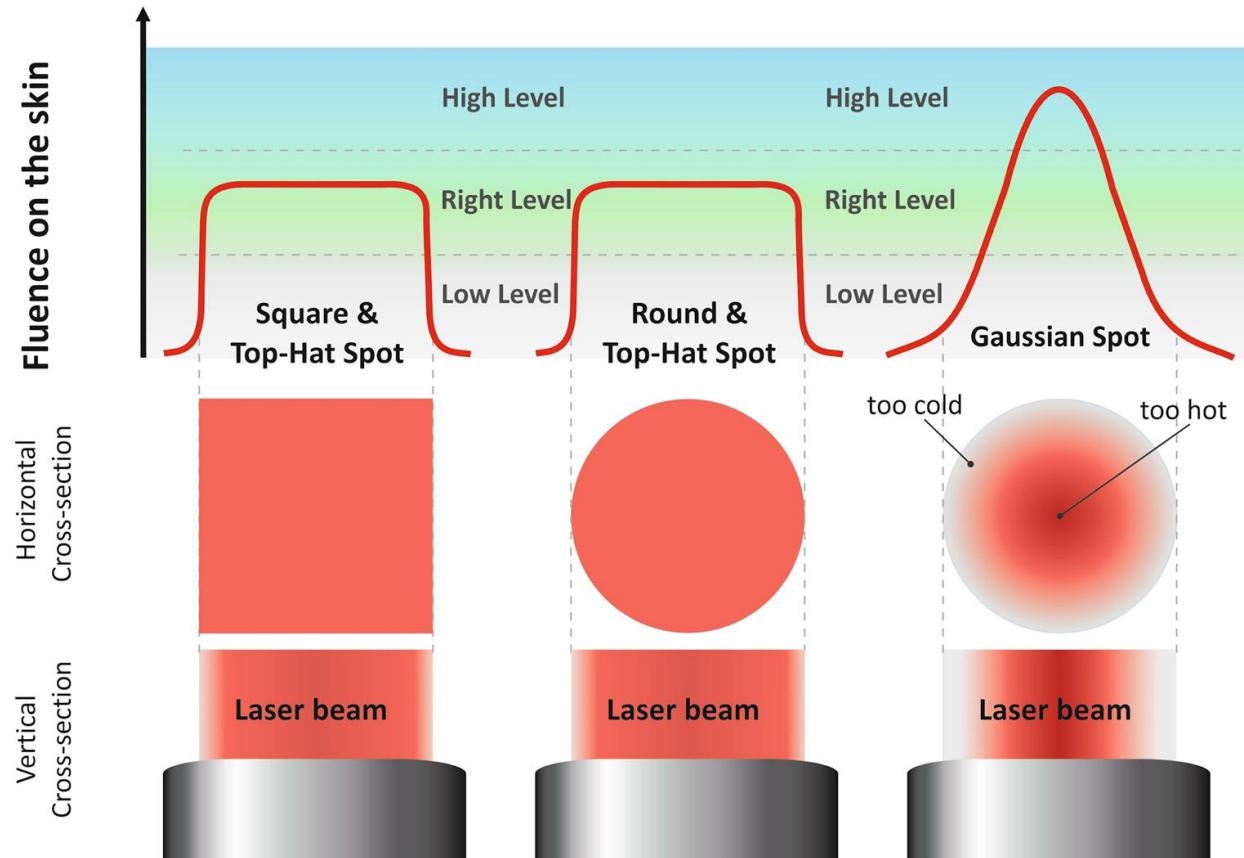

Available spot sizes: 2x2 mm²; 3x3 mm²; 4x4 mm²; 5x5 mm²; 7x7 mm²

Flat-Top Beam Profile

LEVANTA
PLUS

For Square & Round handpieces

The laser beam profile must be as homogeneous as possible, otherwise longer healing time and side effects can occur. The extremely high laser peak power of these devices can treat the skin without any "hot points" in the spot size.

Revive Regenerative

Fractional Laser Handpiece

LEVANTA
PLUS

Spot Size: 8 mm

Dot size : 200 µm-0,2 mm

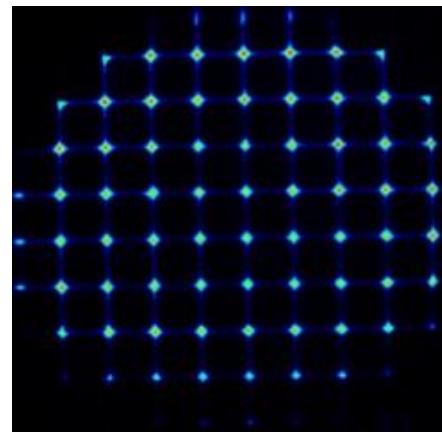

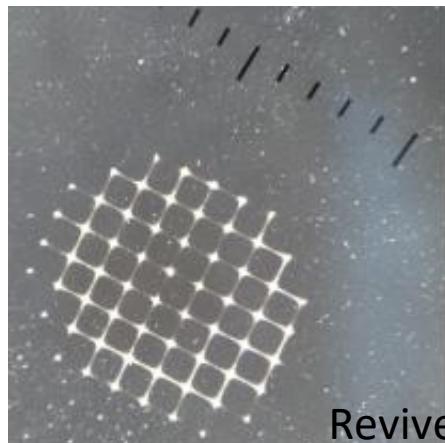

Distance between dot: 1mm

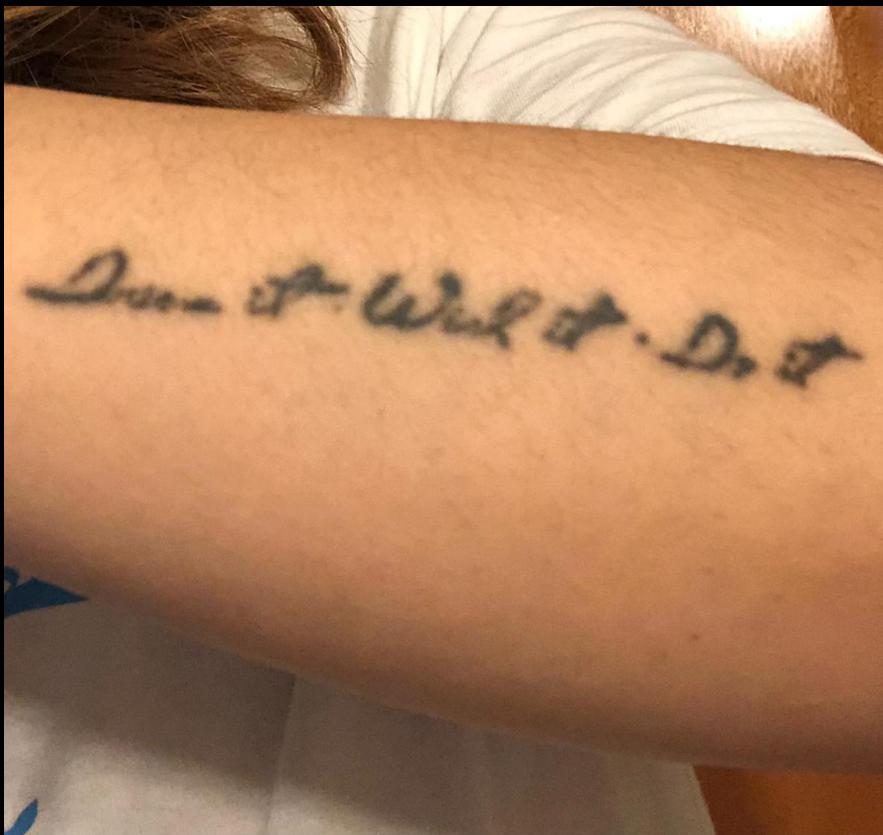

Optical breakdown: 2 mm under the skin

Fluence : 0.07 – 1.45 J/cm²

0,5-11 J/dot

Coverage: ≈ 3% @ 532;
≈ 5% @ 1064 per passage
66 microdots
