

Data Warehouse Program Manager

Client Summary:

This client is a global IT services, consulting and business solutions organization that has been partnering with many of the world's largest businesses in their transformation journeys.

Job Type: Contract – W2 Only, (no Corp2Corp or 1099's)

Duration: 6-months

Location: Erie, PA.

Work Authorization: US Citizen, Green Card holder

What You will Do:

The ideal candidate will possess an understanding of the complexities involved in large-scale data migration projects, particularly from mainframe (e.g., DB2) and open systems (e.g., Oracle, SQL Server) to cloud environments. This includes familiarity with data extraction, transformation, and loading (ETL) patterns, data governance, and the challenges of integrating disparate data sources for a unified data warehouse. You will oversee and lead the program execution for our Data Accessibility strategy. Experience working with teams that have successfully implemented such migrations is crucial.

Qualifications:

- Bachelor's degree in computer science, information technology, or related field
- 9+ years of experience implementing data strategies.
- A solid understanding of AWS cloud data services and their application in building scalable and resilient data platforms.
- Familiarity with services like AWS S3, Amazon Redshift, AWS Glue, and Amazon RDS, and how they fit together within a modern data architecture.
- Comfortable discussing technical trade-offs and dependencies with others.
- Experience working with teams that have successfully implemented migrations

Experience & Skills:

Leadership and Program experience operating in an agile environment.

Experience participating in initiatives focused on data quality, data governance, and compliance. This involves understanding the importance of data integrity, security, and regulatory requirements in a multi-customer data environment, and ensuring that program efforts align with critical standards.

A solid understanding of AWS cloud data services and their application in building scalable and resilient data platforms. This is not about being an expert in each service, but knowing how services like AWS S3, Amazon Redshift, AWS Glue, and Amazon RDS fit together within a modern data architecture.

Tech Search Pros is an equal opportunity employer. All applicants will be considered for employment without attention to race, color, religion, sex, sexual orientation, gender identity, national origin, veteran, or disability status.

While not expected to be a data modeler or a DBA, the candidate should have familiarity with various database technologies (relational, e.g., DB2, Oracle, SQL) and the fundamental concepts of data modeling. This enables effective communication with data architects and engineers, ensuring the data warehouse design meets business requirements for multi-customer access and insights.

Demonstrated experience in guiding teams through the processes of data curation, cleansing, and transformation to create high-quality, consumable data assets. This includes understanding the lifecycle of data from raw source to curated insights and how to enable various stakeholders and customers to effectively access and utilize that data for their analytical needs.
