

# Effluent audits

## TO REDUCE TRADE EFFLUENT COSTS

Our audits identify where changes in operating procedures can reduce trade effluent costs. Simple changes to effluent and waste management can have a significant impact on how much you pay to dispose of effluent. They can also avoid investment in unnecessary equipment or point the way to the correct solution where capital expenditure is needed.

### SITE AUDITS

A fresh pair of eyes can work wonders with effluent treatment. Our experienced staff have worked in many industries and can quickly highlight simple methods of reducing the volume and concentration of effluent sent to sewer. In one case, a client reduced their effluent costs by 48% through simple housekeeping changes in a food production factory

### TRADE EFFLUENT COMPLIANCE

If you have a trade effluent consent then you must comply with it at all times. We have helped clients in many industries to work with water companies and the EA to guarantee long-term consent compliance and turn worrying situations into positive and worry-free experiences.

### EFFLUENT TREATMENT OPTIONS

Sometimes an existing effluent treatment facility needs to be optimised or extended. We can manage the whole optimisation process, from data collection and analysis to developing and helping to implement new effluent management procedures. Designing new effluent treatment plant is one of our specialisms.
