

INSTRUCTION MANUAL

TUBING KIT

This is a tubing kit for the Solar Bilge Pump. This kit gives you every thing you need to install your Solar Bilge Pump in a dinghy. The kit Includes: 4ft of 3/4" hose, (1) SS hose clamp, (2) 90 elbow, (2) cable clamps, and (2) #8 x 1/2" screws.

Place your pump in the lowest spot in your dinghy but not in the shade. Install your 3/4" hose to the pump with the SS clamp (note the hose is a little tight going on the pump outlet you can use a heat gun or a hair dryer to heat up to fit if needed). Run the hose to the back wall of your dinghy and cut it to length. Insert the two 90 elbow in both hoses no clamps needed. Mount hose with cable clamps. Make sure hose can not pump water back into dinghy and is above the water line see diagram.
