ADTS Dashboard Pro – User Guide (v1.7)

1. Overview

The **ADTS Dashboard** is a standalone NinjaTrader 8 AddOn designed to provide a comprehensive market overview in a single window. It monitors **Momentum**, **Trend Strength**, and **Daily Volatility** statistics across multiple instruments and timeframes simultaneously, helping you spot trading opportunities without cluttering your charts.

2. Installation & Launching

- **Import:** File > Utilities > Import NinjaScript Add-On... (Select the .zip file).

- **Open:** Go to Control Center > Tools > **ADTS Dashboard v1.7**.

- **Note:** The window stays "Always on Top" by default for easy monitoring.

3. Interface Layout

The dashboard is divided into three main panels, toggleable via the colored buttons in the header:

- **MOMENTUM (Yellow):** Visualizes price velocity using a heat-map from **1m to 60m**.

  - *Green/Lime:* Strong Buying Velocity.
  - *Red/Magenta:* Strong Selling Velocity.

- **TREND (Purple):** Measures the structural direction of the market.

  - *Histograms:* Visual bars showing the intensity of the trend.

- **DAY STATS (Blue):** Daily context (Day % Change and Average Daily Range).

---

4. Trading Tips: How to Read the Signals

The dashboard is designed to be read as a "Table of Alignment." To make high-probability decisions, visually split the timeframes into two distinct groups:

The Two Zones

1. **Short-Term Zone (1m – 10m):**

   - Represents the immediate "micro-structure" and current order flow.

   - **Use for:** Timing your entry and exit.

2. **Long-Term Zone (15m – 60m):**

   - Represents the dominant "macro-trend" and institutional bias.

   - **Use for:** Determining the overall direction.

Strategy: The Alignment Rule

For the most secure and high-probability entries, wait for **Full Alignment** between these two zones.

Scenario	Short Term (1m-10m)	Long Term (15m-60m)	Action / Interpretation
BULL TREND	🟩 **Green**	🟩 **Green**	**Secure Buy Signal.** The immediate momentum supports the longer-term trend.
BEAR TREND	🟥 **Red**	🟥 **Red**	**Secure Sell Signal.** Price is dropping in line with the dominant trend.
PULLBACK	🟥 Red	🟩 Green	**Caution.** The macro trend is UP, but price is pulling back. Watch for the Short Term to turn Green again for a re-entry.
RALLY	🟩 Green	🟥 Red	**Caution.** The macro trend is DOWN, but price is rallying. Watch for the Short Term to turn Red again for a short re-entry.
CHOP	Mixed Colors	Mixed Colors	**No Trade.** The market lacks consensus. Wait for clarity.

Pro Tip: Never trade against the Long-Term Zone. If the 15m–60m columns are deep Red, do not buy just because the 1m turns Green; this is likely a "fake-out" or short-covering rally.

---

5. Dashboard Controls & Settings

- **RELOAD:** Forces a refresh of all data feeds.

- **PING/CONN:** Monitors your internet latency and data feed connection health.

- **Customization:** Right-click the background > **Settings...** to change Instruments (e.g., ES 03-26, NQ 03-26) or Timeframes.
