

FOR IMMEDIATE RELEASE

WOOD CARE PRODUCTS • CLEANING & MEDICAL SUPPLIES

Green Products Co. introduces new product name and packaging for its water-based wood preservative.

Green's Clear Wood Preservative has a new name, label and packaging. Green's Clear is now sold as **Green's Water-Based Wood Preservative**. It's the same great product with a fresh new look.

Green's Water-Based Wood Preservative is an EPA approved product that can be applied to wood where ever it meets soil or water.

It prevents damage caused by decay, stain, mold, rot, mildew and termites and controls warping and swelling. The active ingredient, copper 8-quinolinolate, controls wood decay fungi and repels wood-destroying insects including termites and wood-boring beetles.

This colorless and easy to use water-based wood preservative is perfect for above ground uses such as window sills, trellises, greenhouse benches, foundations, sills, planter boxes, lawn furniture and decks. Clean up is easy with soap and water.

Green's Water-Based Wood Preservative is part of the well known product line of wood care products, sold by Green Products Co., Copper-Green® and Copper-Green Brown® Wood Preservatives.
