

FOR IMMEDIATE RELEASE

WOOD CARE PRODUCTS • CLEANING & MEDICAL SUPPLIES

Green Products Co. introduces new packaging for its well known wood preservatives.

Green's Wood Preservative products have a fresh new look! The wood care products that are number 1 in the industry—Copper-Green® and Copper-Green Brown® have a new label and packaging. Green's Clear has now been re-named Green's Water-Based Wood Preservative and completes the family of newly designed products.

All three products are the standard for wood protection wherever wood meets soil and water.

These three EPA approved preservatives prevent damage caused by decay, stain, mold, rot, mildew and termites and controls warping and swelling. The active ingredient, copper 8-quinolinolate, controls wood decay fungi and repels wood-destroying insects including termites and wood-boring beetles.

Copper-Green® and Copper-Green Brown® will both penetrate and stain raw wood green and brown and are for external use only.

Green's Water-Based Wood Preservative is perfect for above ground uses such as window sills, trellises, greenhouse benches, sills, planter boxes, lawn furniture and decks. Clean up is easy with soap and water.

Green's Wood Preservatives are available in one gallon, quart and 32oz spray containers. For a complete list of retailers, visit
