Real Estate & Workplace

Facilities Management & Maintenance

Engineering & Construction Management

Energy & Environmental

Technology Integration

Sustainability & Smart Buildings

Healthcare & Medical

Mission Support

Services

TBP&JJ Worldwide Services provides quality services in the built environment that integrate technology, buildings, and people.

Real Estate & Workplace:

We view the workplace as an entity within your business or institution that facilitates the integration of technology, buildings, and people to deliver optimal operational outcomes.

Facility Management & Maintenance:

Our strategy integrates technology, buildings, and people with tested processes, data-rich environments, and analytics to empower clients with the control to manage resources through advanced asset optimization and mobilization.

Healthcare & Medical:

Our technicians work alongside those on the front lines to sanitize operating rooms, clinics, administrative areas, etc. and maintain critical Life Safety systems and equipment without jeopardizing the services provided by the healthcare team.

Engineering & Construction Management:

Our construction managers and engineers control key factors to ensure projects deliver on client expectations and value. We understand how critical it is to deliver high-quality support as construction projects directly contribute to reduced operational costs and increased satisfaction.

Technology Integration:

Our custom solutions are data-driven and utilize a low cost, high-value approach that leverages existing untapped building and organizational data to expose and drive energy savings opportunities, capital investment priorities, and occupant awareness towards sustainable cultural change.

Sustainability & Smart Buildings:

We provide holistic solutions that are smarter because they optimize our clients' resources to improve system reliability, process, productivity, comfort, and efficiency. We deliver reliable and scalable building life cycle service solutions designed to keep processes and infrastructure operating at peak performance.

Energy & Environmental:

We support clients to defend against environmental pollution and other environmental hazards to safe-guard lives, preserve value, and increase awareness around environmental concerns.

Mission Support:

Our unique model leads our customers towards improved processes, automation, asset utilization, logistics, and enterprise management to ensure their mission operations are advancing into the future.
