CLUB'S WEB SITE-----<http://www.geocities.com/g8r81/cfmdc.html>

*Central Florida Metal Detecting Club meets the 2<sup>nd</sup> Friday of each month at 7:30 p.m. The club meetings are held at the Sanford Garden Club building. For directions and other information call Ray Leist-----386-428-3401*

### Presidents Corner

Hi all: Hope you had a great summer and are ready for the Hurricane season. Never like the threat of a storm, but it sometimes makes for a conversational item. Especially if it washes up some great finds on the beach.

It seems like just yesterday we were going through some uneasy times a year ago. Our country has endured the hardship and moved on. Isn't this a great country that we live in? I don't know of any other country in the world that could have went through what we did and still moved forward. This month there will be several memorials around the nation and I hope you can be a part of one in your neighborhood.

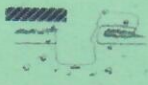

Activities for this month will be in the Club News and Views on the back page. Also there are two major hunts and activities applications included in this newsletter. Lets try to make a good Central Florida Club showing for the

### Chapter Hunt in Fernadina Beach.

We need to remember those on our do better list Don Hurtig, Sue Rainey, all need our thoughts and prayers. Also I know Ron DeVary is doing better, but what he went trough he still needs our thoughts and prayers. If you know of some one who has had some illness, please let me know. Give these members a call or send a note If we have not seen your face in a while, we have missed you. We will see you at the next meeting and don't forget, "Bring a Stranger".  
President Ray Leist.

### TARGET RECOVERY

The following "Hinged Door Method" of digging is widely recommended to minimize damage to lawns. Careful recovery in multiple-use well-groomed areas is the responsibility of all metal-detector users.

|   |  |  |
|---|--|--|
| <p>#1. After locating a good target (metal), pinpoint the center. If your instrument has depth reading, take note of the depth. Practice on surface metals with the loop held several inches above target.</p>  | <p>#2. Using a sturdy digging tool, preferably a trowel or knife, cut a horseshoe-shaped size plug around the pinpointed target. Leave an uncut hinge area to keep the grass in place.</p>  | <p>#3. Cut through the turf, being careful to cut around the target and not damage it.</p>                                |
| <p>#4. Use your digging tool to pry the turf flap up and hinge it over. Your pinpointed target now rests down-side up.</p>    | <p>#5. Check for the target visually, and with your detector, to see if the target is in the flap or remains in the hole.</p>   | <p>#6. A pinpointing probe can be used to speed the process of finding the target in the flap or in the hole.</p>         |
| <p>#7. If additional dirt needs to be removed from the hole, place it on a drop cloth.</p>    | <p>#8. After recovering the target, the dirt can then easily be replaced with a minimum of spreading.</p>   | <p>#9. Replace the turf flap and step on it firmly. Once completed very little indication of digging should be seen.</p>  |

It is very important for the future of metal detecting that you use care in digging - - -
