43. The number of new customers n that visit a dry cleaning shop in one year is directly related to the amount a (in dollars) spent on advertising. This relationship is represented by $n^3 = 13,824a$. To attract 480 new customers, how much should the owners spend on advertising during the year?

44. **Geometry** The volume V of a sphere with radius r is given by the formula $V = \frac{4}{3}\pi r^3$.

- What is the radius of a sphere with volume 36π cubic inches?
- If the volume increases by a factor of 8, what is the new radius?

45. A clothing manufacturer finds the number of defective blouses d is a function of the total number of blouses n produced at her factory. This function is $d = 0.000005n^2$.

- What is the total number of blouses produced if 45 are defective?
- If the number of defective blouses increases by a factor of 9, how does the total number of blouses change?

46. The velocity of a falling object can be found using the formula $v^2 = 64h$, where v is the velocity (in feet per second) and h is the distance the object has already fallen.

- What is the velocity of the object after a 10-foot fall?
- How much does the velocity increase if the object falls 20 feet rather than 10 feet?
