

vKey® Device Manager (vDM)

vKey Device Manager Overview

The vKey Device Manager vDM is the vKey virtual and cloudbased enterprise management console that enables organizations to manage their complete suite of vKey SRA and endpoint solutions from within one pane of glass.

With this centralized console, administrators can streamline remote access and corporate image deployment, monitoring and management with significant cost savings related to maintenance and support.

Above all, vDM is built for a global remote *modern* workplace, capable of segregating and managing multiple partner organizations, satellite offices and kiosk sites.

Create Unlimited Images:

- Virtualized, VDI, ISO, etc.
- Deploy based on user/group profiles/policies, etc.
- Capture Exiting Images: Copy/paste or lift/shift

Deploy based on your needs:

- Network
- Cloud/ISO File
- Physical

vKey Device Manager Features

Commission – Deploy/Provision

The vDM Commission feature allows organization to create, manage and deploy their corporate vKey images. Image can be deployed as a Thin or Thick client. vDM also offers the ability to deploy ISO image-based files, for a seamless Cloud deployment on a global scale, all from one central location.

vDM allows organizations to preconfigure SRA, VDI, cloud, SaaS and virtualized solutions into multiple master images controlled by the console. It also supports multi-tenancy, allowing for remote global offices to easily work autonomously, and can facilitate mass user deployment via both network and cloud.

The console integrates with Active Directory, LDAP, SCCM, SCOM and other user management platforms to drastically minimize the onboarding process.

Above all, vDM is built for a global remote *modern* workplace, capable of segregating and managing multiple partner organizations, satellite offices and kiosk sites.

Allow end-users the ability to create their own vKey at home through web browser or email link.

vKey® Device Manager (vDM)

vKey Device Manager Features

Monitor

vDM allows for the complete monitoring of the vKey device and user, this including user activities, logins, threats detection and prevention.

- Device and Group Monitoring
 - Laptops, Thin or Thick Clients, Mobile Devices, etc.
- ➤ Integrates with 3rd Party EDMS/SIEM Monitoring Solutions
