

Ding Master Pro Instructions

Step # 1 - Click your club "driver, Iron or Putter" to either record or play a recorded shot. Each club has its own set of % macros for you to customize each one to your Ding Master Pro!

Step# 2 - Pick your swing percentage strength you want to hit or record. You match the % icon in Ding Master Pro to WGT golf % in info window. Example: Click 100% Icon, and your goal is to match the 100% swing.

Step # 3 - Record the shot, once step #1 and 2 are chosen "click" record the shot, then do a 100% full back swing then try and hit the ding like a normal shot. The program will then reset. You can then play the shot you just created or save the shot if you like it or record a new shot again over it, if you don't like the last one until you have all dings.

Step #4 - Save the Shot, you just made. If you like the shot click save.

Step #5 - Adjust Swing bar. If you nailed your power setting and were close to hitting the ding, you can NOW use the adjust bar to add or subtract a few milliseconds off the shot to get it to ding every time. Click the refresh icon to reset adjust bar if needed.

Step #6 - Adjusting the ball dot. You must adjust the ball dot "ball backspin or forward spin" prior to playing a shot. The Ding Master Pro is not designed for that extra click. There are too many variables to record with that many swing sets. Just set the DOT before you start your shot.

Step #7 - To stop the Swing once in progress, click the spacebar!

Thank you and I hope you really enjoy our product! Our managers and programmer love WGT and worked really hard to make sure we delivered you the most reliable, easy to use ding master software so enjoy our product. Please contact customer support through our website to report any bugs or questions about the product. Your feed back is important!
