The pioneer of intelligent business display

BGC

公司简介 ■
Company Profile

Dongguan BGC technology Co., Ltd. is a leading provider of business display solutions in China. The company focuses on the development and application of LCD commercial display and multimedia information release. It is a high-tech enterprise integrating R & D, production and sales. Over the years, the company has gathered the first-class domestic technology R & D elites, established a highly educated and high-quality professional team, and established long-term technical cooperation and industrial cooperation relationship with many leading chip suppliers in the world. Dongguan BGC Technology Co., Ltd. starts from the product system architecture design and industrial design, and carries out development and production in strict accordance with international general standards. The system software and hardware from scheme customization, product production, installation and implementation to later operation and maintenance services are in line with relevant international and domestic standards. Through the long-term and unremitting efforts of all the staff of the company, "BGC" brand has won the general recognition of the market and customers. The products have been applied in smart city, government, venues, transportation, energy, finance, radio and television, entertainment, medical care, education and other fields, and has been applied in South Korea, Singapore, India, Russia, Japan, Australia, Hong Kong, etc. Many countries and regions.

Enterprise spirit:

Adhere to the scientific and technological innovation as the foundation, focus on the transformation of innovation achievements into scientific and technological products, provide meaningful and valuable products and services for the society, so as to promote the development of society.

Cultural philosophy:

Responsibility, Gratitude, Integrity, Iinnovation, Excellence.

BGC网络多媒体信息发布系统

1.Brief introduction

DMS is the application of modern network technology in the field of video information, relying on advanced digital coding and:coding technology, using two cutting-edge technologies, networking and split-screen, to form an interconnected network chain oerminal equipment and servers deployed in various business places It perfectly integrates all kinds of multimedia information andpresents it on the same display screen. With the help of background centralized control and unified management,

2.System characteristics

1.The server is developed by the windows system, and the DMS terminal uses the Linux/Android embedded operating system, whichmakes the system more open, richer in resources, stable, and strong in anti-virus capabilities.

2.Access control design, the system can automatically repair when the equipment is abnormal, without crashing.

3.Local storage and playback, low network dependency.

4.The secondary review of the broadcast content and the monitoring of technical means prevent the system from being controlled byilegal users and ensure the legitimacy of information to the public.

3.System architecture block diagram

Terminal management	User management	System Management
Configure variuot terminal information, monitor terminal playback status, run log	Detailed authority management personnel management.	Maintain various information and configuration of system operation
Play management	Media library module	Real-time information
This module is responsible for playing tasks and split-screen modules; program settings.	Edit, upload, integrate, personnel	Real-time information management, maintenance, and release

Media library module	Play content layout style	Terminal operation
Store media information, and media attributes are used for the extraction and release of the playback.	Publish playback content, layout style	Issue terminal operation and maintenance commands

The interactive blackboard solution

The interactive blackboard solution mainly solves the problem that the traditional electronic whiteboard does not support writing, while the traditional blackboard writing content cannot be saved. Through the interactive blackboard, the notes can be changed into electronic version and shared out. The interactive blackboard can be used together with the projection whiteboard, and can also be used with the LCD all-in-one computer scheme.

Touch panel   Writing and preservation   Share   System   Interactive blackboard   Writing board

Product features

Touch panel

The whiteboard adopts the latest generation of infrared touch technology. It supports 10 touch points to write at the same time without dropping the line. It supports the gesture erasing and gesture writing mouse switching. The continuous writing speed can reach less than 4ms.

Write and preservation

The writing pad can choose white font, green background, red font and green background for writing. If necessary, it can be changed to any color pen or background color through software, and the note content can be saved as PPT, word, pictures and other general files.

Share

After writing, the interactive blackboard can quickly share the blackboard content to all mobile devices through scanning, and then the notes can be taken away after saving.

System

The interactive whiteboard host adopts windows and Android dual system, which ensures the security of the design. At the same time, the host supports wireless screen transmission and self built WiFi.
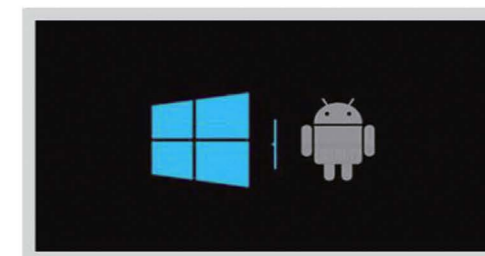

Interactive blackboard

The writing board can be connected with the main control computer quickly by pressing the shortcut keys, and then the electronic notes can be taken.

Writing board

Dual screen interconnected whiteboard. The whiteboard can be used with white panel and writing pen, or green panel with chalk.

Product solutions

Mode 1 Dual screen scheme

One side of the electronic whiteboard integrated machine is equipped with OPS computer, audio, central control and electronic whiteboard, and the right side is connected with books and writing boards. The size of the interconnected writing board can be customized according to the size of the integrated electronic whiteboard machine.

Mode 2 Three screen scheme

Electronic whiteboard is used in the middle, with built-in OPS computer, audio, central control, electronic whiteboard, etc. the left and right sides are connected writing boards. The size of the interconnection writing board can be customized according to the size of the integrated electronic whiteboard machine.

Mode 3 Three screen LCD scheme

The LCD integrated machine is used in the middle for display, and the left and right sides use the interconnected writing board. The size of the interconnected writing board can be customized according to the size of the LCD all-in-one machine. It is recommended that the LCD all-in-one machine should be more than 86 ". The contents of writing on both sides of the blackboard can be synchronized on the LCD integrated machine.

Mode 4 Writing board with green board scheme (customized)

The Internet blackboard adopts the combination push-pull blackboard with intelligent note taking.
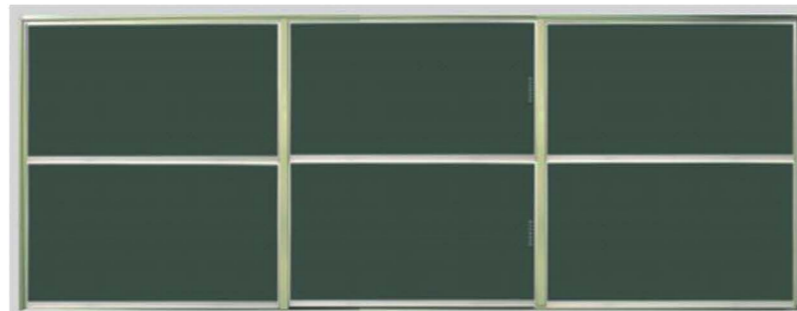

Technical index

Technical index of interactive blackboard scheme	
Appearance	The interactive blackboard is matched with the main display device
Size	The interactive blackboard is matched with the main display device
Panel selection	Green board / White board
