

CONSOLIDATED INTERNSHIP PROJECTS OFFER

1. Enterprise Resource Planning (ERP) System

Internship Project Brief Description: This project aims to develop a modular ERP system designed for small to medium-sized enterprises. The system will include modules for inventory management, human resources, finance, and customer relationship management (CRM). Each module will interact with others to provide a cohesive and integrated system for managing business processes. The project will focus on object-oriented programming, design patterns (like MVC), data persistence using databases, and multithreading to handle concurrent tasks.

2. Banking Automation System

Internship Project Brief Description: This project will create a comprehensive banking automation system that manages customer accounts, processes transactions, and generates financial reports. The system will include features like automated loan processing, fraud detection, and real-time transaction monitoring. It will utilize advanced C++ concepts such as multithreading for handling multiple transactions simultaneously, secure socket programming for online banking features, and database integration for persistent data storage.

3. Blockchain-Based Voting System

Internship Project Brief Description: This project will develop a secure voting system using blockchain technology to ensure transparency and immutability of votes. The system will allow users to cast votes electronically, which are then recorded on a blockchain to prevent tampering and ensure accuracy. The project will focus on integrating blockchain with C++, cryptographic algorithms, and implementing smart contracts to automate the voting process.

4. Ticket Booking System Management

Internship Project Brief Description: This project will develop a ticket booking system for events, travel, and entertainment. The system will allow users to search for available tickets, make bookings, process payments, and manage reservations. The project will include features like

dynamic pricing, seat selection, and automated email notifications. It will involve advanced concepts such as network programming for handling online bookings, object-oriented design, and database management for tracking reservations and customer data.

5. Supply Chain Management System

Internship Project Brief Description: This project will build a supply chain management system that helps companies manage the flow of goods and services from suppliers to customers. The system will include modules for order processing, inventory management, supplier management, and logistics. The project will focus on implementing complex data structures, algorithms for optimizing supply chain operations, and integration with external systems using APIs.

6. Hospital Management System

Internship Project Brief Description: This project will create a hospital management system that manages patient records, doctor appointments, billing, and inventory of medical supplies. The system will provide a user-friendly interface for doctors, nurses, and administrative staff to efficiently manage hospital operations. The project will emphasize object-oriented programming, database management, and secure handling of sensitive patient information.

7. Decentralized Finance (DeFi) Platform

Internship Project Brief Description: This project involves developing a decentralized finance (DeFi) platform that allows users to engage in financial activities like lending, borrowing, and trading without intermediaries. The platform will use blockchain technology to create smart contracts that automate transactions and ensure security. The project will focus on integrating blockchain with C++, implementing smart contracts, and ensuring secure, peer-to-peer transactions.

8. E-commerce Platform

Internship Project Brief Description: This project will develop a full-featured e-commerce platform where users can browse products, add them to a cart, make payments, and track orders. The system will include features like user authentication, payment gateway integration, and

recommendation algorithms. The project will focus on advanced C++ topics such as web server integration, multithreading for handling multiple users, and database management for storing product and user data.

9. Automated Loan Processing System

Internship Project Brief Description: This project will develop an automated loan processing system for banks and financial institutions. The system will handle loan applications, assess credit scores, approve or reject loans, and manage repayment schedules. The project will include features like risk assessment algorithms, secure data handling, and integration with external credit scoring APIs. Advanced C++ concepts such as multithreading, data encryption, and design patterns will be utilized.

10. Real-Time Trading System

Internship Project Brief Description: This project will create a real-time trading system that allows users to trade stocks, bonds, and other financial instruments. The system will provide features like real-time market data, order execution, and portfolio management. The project will focus on advanced topics such as network programming for real-time data feeds, multithreading for handling multiple trades, and algorithms for optimizing trading strategies.

11. Smart Home Automation System

Internship Project Brief Description: This project will develop a smart home automation system that allows users to control devices like lights, thermostats, and security cameras remotely. The system will include features like voice control, scheduling, and energy usage monitoring. The project will involve advanced C++ concepts such as IoT (Internet of Things) integration, multithreading for handling multiple devices, and secure communication protocols.

12. Advanced Ticket Reservation System with AI-Powered Recommendations

Internship Project Brief Description: This project will build an advanced ticket reservation system for transportation (airlines, trains) that includes AI-powered recommendations for alternative routes, dynamic pricing, and customer preferences. The system will feature real-time seat

availability, integration with multiple payment gateways, and secure user authentication. The project will focus on integrating AI algorithms with C++ for providing personalized recommendations, network programming for real-time updates, and robust database management for handling large volumes of booking data.

These projects combine C++ with Blockchain and Fintech technologies, providing an excellent opportunity to explore advanced programming concepts while working on relevant and innovative applications.

A] Internship Credits: A minimum of 30 Credits must be obtained by the student out of 36 Credits Each Project attracts 3 credits. Interns are allocated 12 Projects out of which interns have to complete 10 projects. Interns are free to choose any 10 projects.

B] Intern Projects Choice must be Communicated through the nominated Nodal Officer to the Fintech Council of India on or before August 27, 2024, Post which specific project challenge will be assigned to the interns.

C] Internship Certificate will clearly Indicate as to what projects you have successfully completed

D] Internship Viva will be conducted post completion of Internship & Submission of Internship Project Report

E] Last Date: All opted Internship Projects must be Completed by December 31, 2024

All announced projects will be made Visible to the recruiters at <https://www.fintechplacements.in/>

**CONSOLIDATED INTERNSHIP PROJECTS OFFER IS MADE TO THE ANNEX-I INDICATED
POST-PROFILE FITMENT ELIGIBLE INTERNS**

Regd no	Student Name	Department	Profile Fitment in Fintech Industry	Intern Availability
