

HARDWARE CARE & MAINTENANCE

General periodic maintenance and care are required on all hardware to ensure that they function correctly and maintain their appearance. The external finish of hardware must be kept clean by removing any harmful residue (especially salt spray) from the surface.

Cleaning should be undertaken with a small amount of mild detergent in warm water. A soft brush or cloth free of grit or buttons should be used. Any form of abrasive cleaner or household cleaners should not be used under any circumstances.

After cleaning it is essential that the hardware is wiped down with fresh water to remove any detergent residue.

Internal mechanisms of locks, catches, etc. should be kept in good working order by applying a light spray of lubricant (WD40, RP7 or similar). Care should be taken during maintenance of internal mechanisms that any finished surface is well protected to avoid damage.

Recommended Care & Maintenance Intervals

Type of environment	Definition of environment	Maximum maintenance intervals
Mild	Being rural, away from the coast and remote industry and urban activity	6 months
Moderate	Being mainly urban, inland and away from heavy industrial activity	3 months
Tropical / Severe	Being coastal/marine, subject to salt deposition and within 15km of the eastern coast or 10km of the western coast of Australia	2-4 weeks
