A Joint Supplement Developed Specifically For Dogs

As pets live longer, they display many signs of aging – including joint discomfort. If you're like most veterinarians, you treat more animals with joint issues than ever before.

There are numerous joint products available and many clients are interested in alternative methods of supporting normal joint function. They rely on you, their pets' veterinarian, to provide recommendations. **That's why we developed the family of high-quality Phycox® joint supplements.**

Veterinarians and pet owners trust the Phycox® Joint Supplement brand as an oral supplement that offers pet owners a clear option for the health of their dogs. Phycox® Joint Supplements are comprehensive formulas that help maintain healthy cartilage and joint mobility in dogs, young and old. As joint discomfort decreases, many dogs become more playful – your clients will see the improvement in their pets' behavior.

Phycox® Joint Supplements are the convenient choice for veterinarians, pets, and pet owners.

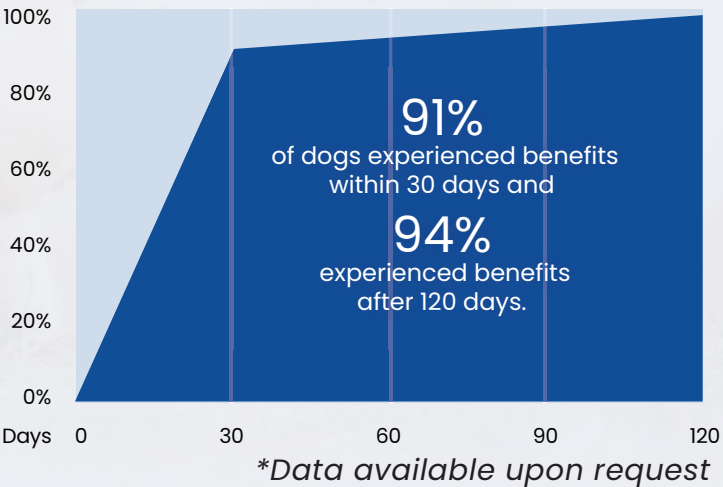

A Joint Supplement With Noticeable Benefits

Thousands of veterinarians and pet owners have come to know and trust Phycox® Joint Supplements to improve pets' quality of life by supporting their joint health. This trust comes from delivering great results.

An observational safety study* with 12 dogs documented no adverse events even with oral administration of 16 times the labeled dosage of phycocyanin. The dogs remained healthy and maintained body weight throughout the course of the study without any dose-related adverse events reported.

A clinical study* evaluated 69 dogs with joint discomfort that received Phycox® Original Formula Soft Chews Joint Supplement. The study showed statistically significant owner-perceived improvements in mobility, playfulness, alertness, activity level, ability to rise, discomfort level, and enthusiasm to run outside. The result was happy dogs and happy owners.

Phycox® Joint Supplements Ingredients

Phycox® Soft Chews Joint Supplement

- Antioxidant Support: Phycocyanin, Alpha Lipoic Acid, Vitamin C, Vitamin E, Calcium Phosphate, Citrus Bioflavonoids, Grape Seed Extract, Selenium, Manganese Sulfate, Zinc Sulfate
- Joint Function: Flaxseed Oil, Turmeric, DHA, EPA
- Joint Health & Cartilage: Glucosamine, MSM
- Muscle Health & Strength: Creatine Monohydrate
- Bone Health: Boron

Phycox® MAX Soft Chews Joint Supplement

Contain 3X phycocyanin and all the ingredients found in Phycox® Original Formula Joint Supplements, plus 6 additional ingredients to aid in senior health and advanced joint support:

- Antioxidant Support: 3X Phycocyanin, Cinnamon, CoQ10
- Weight Management Support: Gymnema Sylvestre, Chromium Picolinate
- Joint Function: Decaffeinated Green Tea Extract
- Urinary Tract Health: Cranberry Extract

The Only Canine Joint Supplements With Phycocyanin

Phycox® Joint Supplements are the only canine joint health support products containing phycocyanin. Phycocyanin is a natural antioxidant that has powerful free radical scavenging properties. Free radicals cause cellular damage, and inflammation; phycocyanin supports the body's normal defense against the harmful effects of these free radicals. Clinically, this may help ease discomfort associated with normal daily exercise and activity.

A Complete Joint Supplement

Phycox® Joint Supplements provide multiple formulations with a comprehensive blend of beneficial ingredients for joint health – phycocyanin, glucosamine, MSM, antioxidants, creatine and more. This unique blend of phycocyanin and beneficial ingredients helps support bone, muscle, and joint health.

A Phycox® Joint Supplement for Every Canine Patient

Phycox® Soft Chews Joint Supplement

The original formula is recommended for active dogs and dogs of all ages who require a moderate level of joint support.

Phycox® MAX Soft Chews Joint Supplement

Recommended for sporting and working dogs, and dogs of all ages who require a maximum level of joint support. Phycox® MAX Soft Chews Joint Supplement contains 3X the phycocyanin as compared to Phycox® Soft Chews Joint Supplement, and six additional ingredients to aid in senior health and advanced joint support.

Phycox® HA HypoAllergenic Soft Chews Joint Supplement

Developed for dogs with food sensitivities or intolerances. Phycox® HA HypoAllergenic Soft Chews Joint Supplement uses hydrolyzed vegetable protein from soybeans and does not contain beef, chicken, or wheat. Hydrolyzed proteins are small molecules which are less likely to stimulate an allergic response. If your patients have food sensitivities or intolerances, recommend Phycox® HA HypoAllergenic Soft Chews Joint Supplement.

Phycox® HA HypoAllergenic MAX Soft Chews Joint Supplement

Phycox® HA HypoAllergenic MAX Soft Chews Joint Supplement contains the same hydrolyzed vegetable protein as Phycox® HA HypoAllergenic Soft Chews Joint Supplement, in addition to six more ingredients and 3X the phycocyanin for maximum support of joint health.

Phycox® Small Bites and Granules Joint Supplement

Developed for dogs under 30 pounds or for dogs who may not eat the larger Phycox® Soft Chews Joint Supplement.

100% Palatability Guaranteed

Dogs love the taste of Phycox® Joint Supplements. In fact, we guarantee the palatability of our products when the product is purchased from a veterinary hospital. If your clients are not 100% satisfied with the palatability of any Phycox® Joint Supplement, we will unconditionally replace any product returned to your hospital.
