

INPUT Settings

This guide explains what each setting does and how it effects your trading.

Risk Notice: Automated trading carries financial risk. No setting guarantees profit.

EXECUTION BEHAVIOR PROFILE

Flow-based momentum response

- Trades when market momentum changes.
- Uses single trend crossover signals.
- Moderate trading activity.

Timed execution cadence

- Opens trades when a new cycle starts.
- Stable and consistent behavior.
- Best choice for most users.

Expansion-focused engagement

- Opens more trades during strong movements.
- Higher exposure and higher risk.

Direction-weighted execution

- Trades based on candle direction.
- Very active trading.
- *Designed for extreme fast scalping styles.*

LICENSE KEY

- *N/A intergraded*
- *EA will trade without a valid license.*
- *License is internal linked to your trading accounts*

TRADING SESSION

Session start (server time)

- Hour when trading begins.

Session end (server time)

- Hour when trading stops.

Example:

Start 1 – End 23 → trades most of the day.

MARKET ALIGNMENT

Market alignment sensitivity

- Controls how quickly the EA reacts to market changes.

Lower value → faster signals.

Higher value → smoother trend detection.

Alignment reference offset

- Moves the reference point of the market alignment.

TRADE SIZE & RISK CONTROL

Trade volume

- Starting size of each trade.

Larger size increases both risk and potential profit.

Risk protection distance

- Maximum loss allowed per trade.

Profit expansion target

- Target profit level for trades.

Always choose a trade size suitable for your account balance.

PROFIT PROTECTION SYSTEM

Activate profit protection

- Turns breakeven protection ON/OFF.

Progress required to activate

- Profit needed before protection starts.

Lock placement buffer

- Amount of profit secured.

Adaptive profit protection

- Uses market alignment to confirm protection.

Adaptive evaluation depth

- How strong confirmation must be.

Adaptive offset

- Adjusts confirmation position.

Minimum progress requirement

- Minimum price movement needed.

DYNAMIC FOLLOW SYSTEM

Enable dynamic follow

- Turns trailing stop ON/OFF.

Activation threshold

- Profit required before trailing begins.

Follow buffer distance

- Distance stop follows price.

Useful for strong trending markets.

EXPOSURE GROWTH SYSTEM

Enable exposure growth

- Gradually increases trade size.

Growth increment

- Size increase per step.

Maximum growth steps

- Maximum number of increases.

Higher risk.

DRAWDOWN PROTECTION

Enable drawdown protection

- Stops trading after reaching loss limit.

Maximum allowed drawdown

- Loss amount that triggers protection.

Drawdown pause duration

- How long trading pauses.

Drawdown behavior mode

- How EA reacts after loss.

MARKET STABILITY GUARD

Enable market stability guard

- Avoids trading in unstable markets.

Evaluation window

- How far back the EA checks market behavior.

Loss tolerance

- How many losing trades allowed before pause.

TREND CLARITY PAUSE

Enable clarity pause

- Pauses trading when market direction is unclear.

Close vulnerable positions

- Closes losing trades during pause.

Evaluation horizon

- How far back market is checked.

Offset

- Adjustment value.

STRUCTURAL EXIT SYSTEM

Enable structural exit

- Closes losing trades when market structure changes.

Exit evaluation depth

- Sensitivity of exit detection.

Offset

- Adjustment value.

MOMENTUM GUARD

Enable momentum guard

- Avoids trades in extreme market conditions.

Momentum evaluation length

- Sensitivity of momentum check.

Neutral balance level

- Midpoint reference.

MARKET CONDITION FILTER

Higher context confirmation

- Uses higher timeframe trend confirmation.

Avoid low-energy conditions

- Avoids slow markets.

Evaluation window

- Market movement check period.

Momentum threshold

- Minimum movement required.

Compression distance

- Market range threshold.

EXPOSURE MANAGEMENT

Reduce losing exposure

- Closes losing trades in opposite direction.

Resolve on directional shift

- Closes trades when market reverses.

Force full resolution

- Closes all opposite trades.

TRADING LIMITERS & SAFETY

Max actions per cycle

- Maximum trades per candle.

Max active positions

- Maximum open trades allowed.

Minimum delay between actions

- Required delay between trades.

Market compression threshold

- Prevents trading in tight ranges.

Range evaluation window

- Period used to measure market range.

INTERNAL SYSTEM IDENTIFIER

Internal system identifier

- Unique number identifying EA trades.

Only change if running multiple EAs.
