Description/Address	Sampling Date/Time	Sampled By	Test Requested															

All samples must be submitted along with the lab request form. All water samples being submitted for Coliforms/E-Coli testing must have the date and time sampled noted. The sampling and handling is out of the laboratory control when the client submits samples they have sampled themselves. All samples should be temperature controlled based upon the testing that is being requested. Sample temperature of <10 degrees is preferred for bacteria testing or it can affect the quality of results. For a submission quickly after sampling, the temperature is accepted <25 degrees. If the customer chooses to proceed with a deviation, it must be documented. TCE-Q Reference: IDEXX Colilert and Colilert Enzyme Substrate Method. Outsourcing of testing of sub-contracted labs may be required on rare occasions.
