PRÓTESIS DE REEMPLAZO -COPA ACETABULAR DOBLE MOVILIDAD

REEMPLAZO DE CADERA

COPA DOBLE MOVILIDAD CEMENTADA Y NO CEMENTADA

A double coating made of strong granulometry hydroxyapathie (HA) and porous pure titanium ensures an osteointegration in the acetabulum.

The SPIRE* acetabular cup is a primary anti-luxation cup to be impacted lts primary stability is ensured by:

- A press fit thanks to several retentive equatorial grooves providing an
 effective outer diameter greater than the nominal diameter (or size).
- An antirotational effect thanks to 6 meridian grooves (one every 60°), one of them opened being used as a reference mark for the cup orientation before impaction (1).

Material: S.S (ISO 5832-1), Titanium Alloy (ISO 5832-3), Co. Cr.

Coating: HA, Porous

COPA DOBLE MOVILIDAD CEMENTADA Y NO CEMENTADA

Metal Back - Insert

Material: XLPE / UHMWPE

The polyethylene insert is bipolar and spherical with an impaction system of the prosthetic head.

The antiluxation is ensured by the mobility of the insert in the cup and by the partial extension of the hemispheric cup, under its equatorial plane.
