

# AI Risk Management & Governance

## for Legal Professionals

### More than 300 lawyers and law firms were sanctioned for AI-generated errors in 2025.

When attorneys use AI tools without governance, fabricated citations go unchecked, confidential data leaks, and malpractice exposure grows. AI risk training, governance, and policy work together to mitigate that exposure, so your firm can use AI as a strategic advantage.

## WHAT WE DO

### AI Governance & Policy Workshop

A facilitated leadership session that establishes the governance foundation required before policy can protect your organization. Leaders gain a clear understanding of authority, risk boundaries, verification requirements, and accountability. This positions you to develop an AI policy that is specific, enforceable, and aligned with how your firm actually operates.

### Customized AI Policy Development

We develop enforceable AI policy tailored to how your firm operates. Our proprietary Reverse Audit™ process identifies where exposure exists, and we deliver finished policy informed by coordinated input from your subject matter experts.

Governance only works when your employees gain the AI proficiency to support your risk-mitigation efforts. Our [AI Workforce Readiness](#) track helps employees master essential skills, role-specific applications, and AI risk knowledge, so governance is consistently executed from strategy and policy to daily practice.

“Kathy Serenko effectively identifies the challenges and benefits of using AI, as well as how lawyers can harness its advantages with appropriate training.”

**Shelley Simpson, JD**, Criminal & Family Law  
Dean of Students, Detroit College of Law
