

## How-to-Measure for a Garage Door

- 1 Measure Width & Height**  
 The width and height of the garage door opening is the same size as your new garage door.

---

- 2 Measure Sideroom**  
 This is the width of the areas on the left and right of the garage door opening. Opening must be at least 3-3/4" on each side.

---

- 3 Measure Headroom**  
 This is the distance between the top of the door and the ceiling (or 1st obstruction). Distance required for most doors with an opener is 15".

---

- 4 Measure Backroom**  
 This is the distance from the garage door to the rear of the garage (or 1st obstruction). This must be at least the door height plus 18"; or door height plus 50" if an opener is installed.
