

5P'S OF CYBERSECURITY

Plan

Laying the groundwork for resilient cybersecurity strategy this involves:

1. Developing an incident response plan.
2. Conducting comprehensive risk assessment.
3. Prioritizing your security plan.

Protect

Protect stage refers to implementation of cybersecurity measures.

1. Enforcing Multi-Factor Authentication (MFA).
2. Hardening systems and tools.
3. Employing Endpoint Detection and Response (EDR) Tools.

Prove

Substantiating of security measures and demonstrating their effectiveness by

1. Regularly testing backups.
2. Network Monitoring and Logging
3. Vulnerability and patch management.

Promote

Promoting cybersecurity awareness within an organization by

1. Conducting Cybersecurity Awareness Training
2. Evaluating third party vendor's cybersecurity
3. Championing your cybersecurity framework.

Partner

Cybersecurity is not a sole endeavour and relies on right partnership and efforts. This involves

1. Obtaining cyber insurance
2. Hiring a cyber attorney
3. Partnering with cybersecurity experts.
