

ENVIRONMENTAL POLICY

Faherty Civil Contractors is committed to preventing environmental harm to the eco systems and communities where we operate and wherever possible we aim to improve the quality of the environment, for our staff and for the wider community.

Our activities are planned and performed to minimise environmental impact and to comply with legislative and contractual requirements. Planning seeks to make the most effective and efficient use of resources, prevent pollution and encourage employees to develop an ecologically sound approach to their work and lifestyle.

Faherty Civil Contractors will:

- Regularly monitor and review use and disposal of materials.
- Purchase materials and equipment in an environmentally friendly manner. Preference will be given to items produced in ways which cause least harm to the environment and, wherever practicable, create least waste.
- Encourage the reuse and recycling of materials, where practicable and possible.
- Encourage staff to distribute internal and external documentation electronically.
- Provide sufficient training in environmental aspects of work, to ensure that staff are aware of the actions required to eliminate or minimise the impacts of those aspects.

We demonstrate our commitment by implementing an Environmental Management System which provides a framework for setting and review of environmental performance objectives and targets and meets the requirements of ISO 14001:2004 – Environmental Management System.

This policy is reviewed regularly to ensure and improve its effectiveness in meeting legal requirements and planned environmental outcomes. It is communicated to staff at induction and during daily toolbox talks and is available to staff and other interested parties on the company web site.

A handwritten signature in black ink, appearing to read "Alan Faherty", is written over a horizontal line.
