"STARCROSSED LOVERS"

July 3, 2016

Sol and its Mate on a clandestine, rendezvous caught embracing... drawn to each other.

"It is in the east, and Juliet is the sun."

A Romeo and Juliet moment.

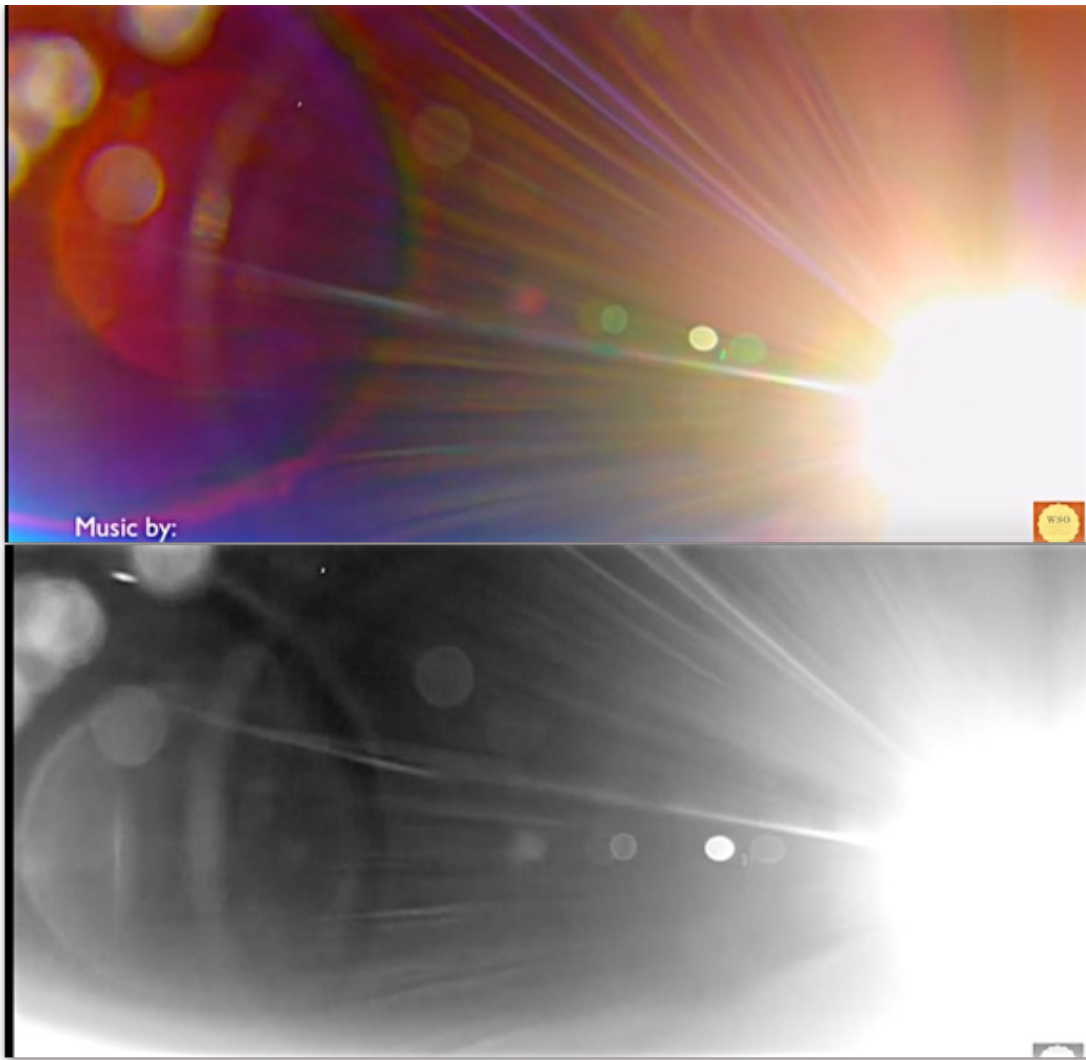

*"The brightness of her cheek would shame the stars." says Shakespeare.
Masquerading as enemies, they enter the scene and begin their dance.*

... "a daylight doth a lamp: her eye in heaven ... birds would sing and think it were not night! From forth the fatal loins of these two foes, a pair of star-crossed lovers..."

I have seen many pictures of the orbs in the sky sent in by people who have captured lens flares and unusual light flaring bodies including myself. Yet the birds ARE singing in the night reported across the world.

Suddenly, I could envision the electric clutch of two lost lovers yearning to unite pretending to be foes. As their unique clouds hailed their arrival and the sun melted like hot butter and the skies glow in iridescent RED with powerful rays beaming outward. Sol struck out with red "flower petals" at the orb's arrival. Are they friends or are they foes? Either way they may effect the earth with too much vibration and frequency for the earth to remain as it once was. ~ SR

The heart shape when both bodies merge with lightning charges.

* see Steve Dreyer utube channel - his hard work has paid off with

wonderful pictures of this astounding interaction on sunset and sunrise.

AstroScience shows above a binary star interaction in space.
