Protecting Fertility Treatment & Building Families Post-Dobbs Decision

WHY DOES FERTILITY HEALTHCARE NEED PROTECTION?

Fertility healthcare may be at risk in Colorado, depending on the language used in bills or laws passed after the reversal of Roe v. Wade. Assisted Reproductive Technology (ART), such as In Vitro Fertilization (IVF), involves fertilization of eggs in a lab to make embryos for transfer to the uterus to help people conceive. If a bill or law defines an embryo as a person, this can create significant issues for physicians and patients, since most embryos are not biologically capable of becoming a healthy baby. Giving embryos the legal status of a person can potentially make fertility care inaccessible in Colorado. The people of Colorado have used IVF to conceive over 2,000 babies in 2019 alone! Without access to safe and effective IVF, many of these families would not exist today.

11% of American women and 9% of American men of reproductive age experience fertility challenges. IVF is one of the safest and most effective ways to treat infertility. Personhood laws will be a significant barrier to many people trying to have a family.

HOW CAN COLORADO PROTECT ACCESS TO FERTILITY TREATMENTS?

To ensure fertility treatments remain available in Colorado, patients and providers need to be protected from criminal/civil action should an embryo or pregnancy not result in a live birth. Legislative language related to reproductive health needs to protect the patient and provider when:

• an embryo or fetus does not survive genetic testing
• a patient experiences a loss of pregnancy including stillborn or ectopic pregnancy
• a patient makes decisions pertaining to the usage of their embryo(s)
• a healthcare agent/proxy/surrogate/guardian is acting on behalf of a pregnant person
• a practitioner is providing life-saving care to a pregnant person
• a practitioner is providing routine medical care for an abnormal pregnancy, including ending a pregnancy

IN 2019, APPROXIMATELY 2,028 BABIES WERE BORN IN COLORADO WITH THE HELP OF ASSISTED REPRODUCTIVE TECHNOLOGY (ART). The Center for Disease Control and Prevention ART Success Rates
