QUOTE(S) OF THE WEEK

"I had rather excel others in the knowledge of what is excellent, than in the extent of my power and dominion." – Alexander the Great

"Real knowledge is to know the extent of one's ignorance." – Confucius

"It is very good to copy what one sees; it is much better to draw what you can't see any more but is in your memory. It is a transformation in which imagination and memory work together. You only reproduce what struck you, that is to say the necessary." – Edgar Degas

"There are two kinds of truth: the truth that lights the way and the truth that warms the heart. The first of these is science, and the second is art. Neither is independent of the other or more important than the other. Without art science would be as useless as a pair of high forceps in the hands of a plumber. Without science art would become a crude mess of folklore and emotional quackery. The truth of art keeps science from becoming inhuman, and the truth of science keeps art from becoming ridiculous." – Raymond Chandler

"Everything I've achieved has come from perseverance. I've never met another entrepreneur who had a painless path to success -- everyone who tries to bring new ideas to the world is tested. All aspiring entrepreneurs should remember that failure doesn't mean the end of the road. It can lay the groundwork for something even greater." – Reshma Saujani

"If the doors of perception were cleansed every thing would appear to man as it is: Infinite. For man has closed himself up, till he sees all things thro' narrow chinks of his cavern." – William Blake

"Curiosity killed the cat, but for a while I was a suspect." – Steven Wright

The **National Creativity Network** believes that by fostering creativity in our society as a whole, and specifically with future generations, America can remain a leader in innovation and free enterprise. The very future of our communities and institutions depends on our ability to nurture and harness imagination to creatively solve problems. If creativity is to be nurtured, systems, institutions and networks must be transformed.

The opportunities that emerge to transform our nation are largely dependent upon the degree to which we are connected to each other. Our connection will become a catalyst:

- to enhance the flow of relevant information,
- and to improve the ease with which key nodes of creativity, be they in the domains of Education, Commerce, Culture or across disciplines, can gain access to the best thinking, best questions, and most successful practices as well as other resources their ventures may require.

Our strategy is to engage thought leaders across North America to create a powerful network for transformation.
