

APPLICATION NOTES

EcoProven Anti-Microbial Mouth Wash / Spray

How EcoProven Anti-Microbial Mouthwash / Mouth Spray Works

EcoProven's technology combines with moisture in the upper respiratory tract to become a hyperactive colloidal water solution. This colloidal solution creates an anti-microbial barrier that coats the cells lining the mouth and upper respiratory tract. This solution contains countless microscopic ionic particles which discharge electrical (ionic) charges in all directions. The pathogen body is "caught in a crossfire" of these ionic charges. This "crossfire" shreds the protective outer lipid membrane of viruses and gram negative bacteria and the pathogens are destroyed by EcoProven's powerful colloidal action.

Once this outer protective layer is destroyed, the inner RNA is exposed and the combination of the colloidal action and anti-microbial surfactants quickly destroys the pathogen.

How EcoProven Anti-Microbial Mouthwash Helps Individuals that are Actively Ill with COVID-19

For individuals that are actively presenting COVID-19 symptoms, EcoProven Anti-Microbial Mouthwash helps reduce the severity and duration of those symptoms by reducing the viral and bacterial load in the mouth and upper respiratory tract. The mouth and upper respiratory tract is considered to be the primary entry point into the human body for many pathogens including the SARS-CoV-2 virus which will then imbed itself into the cell walls and cause active COVID-19 infection. The total surface area of the upper respiratory tract represents a major percentage of the COVID-19 (and many other pathogens) "internal infection area". By reducing (or eliminating) the viral or bacterial load in this area, it allows the body's natural immune system to focus its concentration and response on the remaining areas of active infection.

Recommended Dosage Amounts/Volumes

To use EcoProven Anti-Microbial Mouthwash as a preventative measure, sip or spray at least 2 to 3 millilitres of mouthwash into mouth and gently swish for 30 to 60 seconds. Ensure that all areas of mouth and upper throat have been thoroughly rinsed. Spit out excess liquid when finished.

For individuals that are COVID-19 positive or actively displaying symptoms of other illnesses, sip or spray 3 to 5 millilitres of EcoProven Anti-Microbial Mouthwash into mouth and gently swish in the mouth for 1 minute to thoroughly wet all surfaces in the mouth and upper throat area. Spit out excess liquid when finished.

MOUTHWASH or SPRAY ?

MOUTHWASH

Using EcoProven Anti-Viral Mouthwash as a preventative measure

- Measure at least 2 to 3 ml of EcoProven solution into a cup/spoon. Make sure to use enough EcoProven to be able to gently swish fluid in mouth.
- Sip the solution and "swish" in the mouth 30 to 60 seconds to ensure that all areas of mouth and upper throat have been thoroughly covered by the solution.
- Spit out excess liquid when finished.

MOUTH SPRAY

Another method of applying EcoProven Anti-Viral Mouthwash is with a pump sprayer.

- Spraying directly into the mouth may be more convenient than measuring / pouring from a bottle into a cup.
- The spray method helps disperse the product in the mouth.
- A pump spray dispenses a "measured" spray and 6 to 8 pumps (depending on the specific sprayer) will deliver enough liquid to swish around the mouth.
- Measured sprays may help conserve EcoProven and it may last longer versus the potential of over-pouring and waste when using the bottle and cup method.

5 ml = 1 teaspoon = .17 fluid ounce
15 ml = 1 Table spoon = .5 fluid ounce

How & When to Use (using Covid 19 as an example)

Preventative (COVID-19 Negative) Individuals - To be used as a preventative measure. Recommended dosage is at least 2-3 ml of EcoProven 1-3 times/day EVERY DAY to maintain protection against possible virus exposure.

Asymptomatic (COVID-19 Positive) Individuals - To be used to mitigate the onset and progression of COVID-19 disease symptoms. Recommended dosage is 5 ml, 3 times a day for 2 weeks beginning immediately after COVID-19 positive diagnosis. There after, use 2-3 ml 1-3 times a day, EVERY DAY to maintain protection against possible virus exposure.

Symptomatic (COVID-19 Positive) Individuals Actively Sick - To be used to reduce the duration and severity of the COVID-19 disease symptoms. Recommended dosage is 5 ml, 3-4 a day for 2 weeks. There after, use at least 2-3 ml, 1-3 times a day, EVERY DAY to maintain protection against possible virus exposure.

Symptomatic (COVID-19 Positive) Individuals in Respiratory Distress - To be used to reduce the duration and severity of the COVID-19 disease symptoms. Recommended dosage is 5 ml, 3-4 a day for 2 weeks. There after, use at least 2-3 ml, 1-3 times a day, EVERY DAY to maintain protection against possible virus exposure.

1/2 (.5) fluid ounce = 15 millilitres
1 fluid ounce = 30 millilitres

Recommendations & Precautions

- Always maintain proper hydration when sick
- Drink water when using this product.
- Not for consumption. Do not drink. Spit out extra fluid when finished "swishing".
- For maximum benefit, do not eat or drink for 15 minutes after application. It is recommended that you eat and drink prior to application, if practical.
- To date, there have not been any hypersensitivity or allergic reactions reported.
- However, if hypersensitivity or allergic reactions do occur, discontinue use immediately . If reaction is severe, contact a medical professional.
- Keep out of the reach of children. Supervise use by children 3-6 years old.
- For longest life, store between 0 - 30 C (32 - 100 F). Avoid temperatures over 40 C (104 F).
- Freezing will not damage. Efficacy will be maintained. Simply thaw and use.

EcoProven Anti-Viral Mouthwash / Spray is absolutely safe. Multiple applications of the product throughout the day (or night) are encouraged for maximum protection.
