

## Site Security Assessment

Adennill will visit the designated site(s) and evaluate vulnerabilities associated with physical security and emergency preparedness. The Adennill Site Assessment is completely comprehensive and accomplishes a 360-degree examination of the site, its practical functions, and its surroundings. Adennill identifies both best practices used by the site and any deficiencies related to safety and emergency preparedness identified during the site assessment.

### Adennill will thoroughly examine the facility, to include:

-  The surrounding area for hazards that could create a security concern
-  Internal and external design features
-  Present technical and physical security measures
-  Relevant safety and security policies and procedures currently in place

**360-Degree  
examination of  
the site**

### About the Site Assessment

Adennill will review pertinent emergency preparedness such as facility and exterior grounds access control features, as well as cameras and video surveillance systems. In addition, Adennill will conduct on-site interviews with all key personnel and applicable facility and maintenance staff.

Following the Site Assessment, Adennill will provide an Executive Summary detailing any deficiencies noted and offer cost effective strategies to mitigate those deficiencies.

The Site Assessment takes approximately six (6) hours per location to complete. During two (2) of those hours, an individual with extensive knowledge of the facility needs to be available to provide a virtual tour and answer any policy and procedure questions.

### About Adennill

Adennill assists clients in transforming crisis into value by responding to some of the largest and most complex crisis events as well as combining best practice consulting with proven crisis management expertise. Adennill empowers clients to manage crisis and risk through assessments, audits, program development, insurance partnerships, training and advisory services.
