School Cyber-Security Self-Assessment

Adennill's School Cyber-Security Self-Assessment reviews cyber-security controls, management processes, and a school's information technology strategy to provide a better preparedness understanding. This process is viewed as a continuous improvement journey and not a single destination point.

The fastest growing threats for all schools, public and private, is unauthorized network intrusion, ransomware, denial of service, and cyber threat. Today's schools are experiencing pressures to address the resiliency of their technology infrastructure. Whether it is student data, regulatory privacy compliance, staff online safety, or network asset protection, a comprehensive cyber-security program is required to prepare a school and improve resilience.

Adennill's goal in administering this cyber-security self-assessment is to raise your school's awareness of how well its cyber program aligns with education sector standards and best practices, with respect to prevention, mitigation, and response to threats.

Seven Assessment Aspects:
- Access Control
- Configuration Management
- System and Information
- Integrity Audit and Accountability
- System Communications
- Controls Backup and Media
- Protection Testing and Training

There is no single solution to making your cyber infrastructure safer. All roads lead back to preparedness, which means understanding the threats and vulnerabilities associated with your school's cyber-security, and implementing controls that are integrated into your overall continuity and preparedness program.

The Adennill Cyber-Security Self-Assessment:

- **Offers** a diagnostic tool that provides an evaluation of your school's cyber preparedness
- **Measures** current performance levels
- **Assesses** your preparedness relative to peer group best practices
- **Identifies** areas of strength and improvement opportunities
- **Proposes** an improvement roadmap for the best return on the resources invest.

The Self-Assessment is completed in one sixty minute interview. Adennill then performs a detailed analysis of the data against industry standards. You receive a comprehensive report of the results presented to you and your team in a follow-up conversation.

Adennill is currently engaged in helping to keep hundreds of public and private schools (K-12 and higher education), and tens of thousands of students safer. Adennill is a national leader in emergency response, crisis management, crisis communications, and workplace violence.
