

# Club Project Part 8

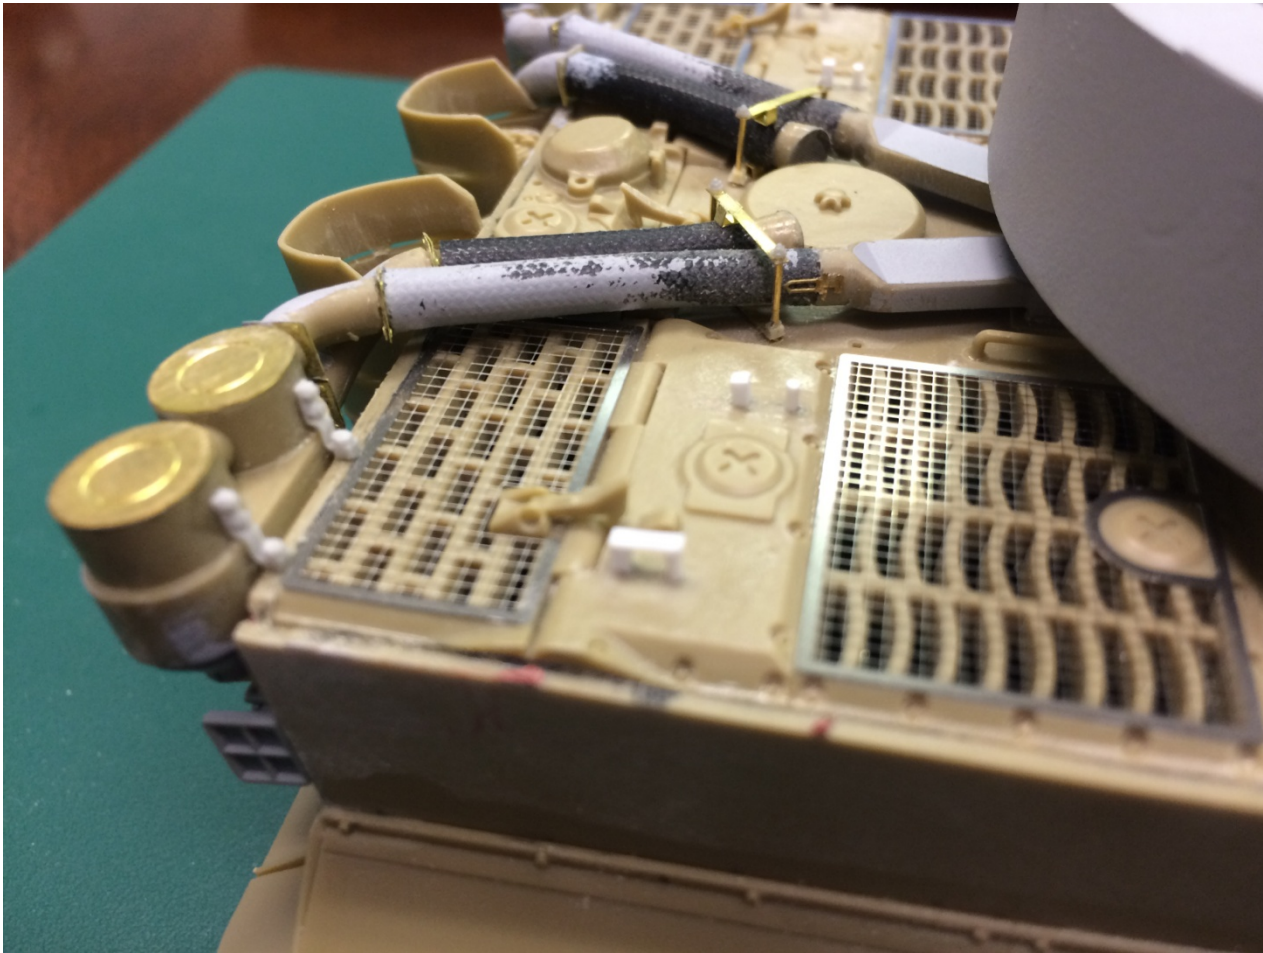

## Afrika Tiger I

# Part 8

- Tow Cables
- Front Head Lights
- Track Cables
- Turret Details
- Tracks : Fruilmodel Set No. ATL-116
- Tech Tip : I brought in the Nutter by Small Shop.

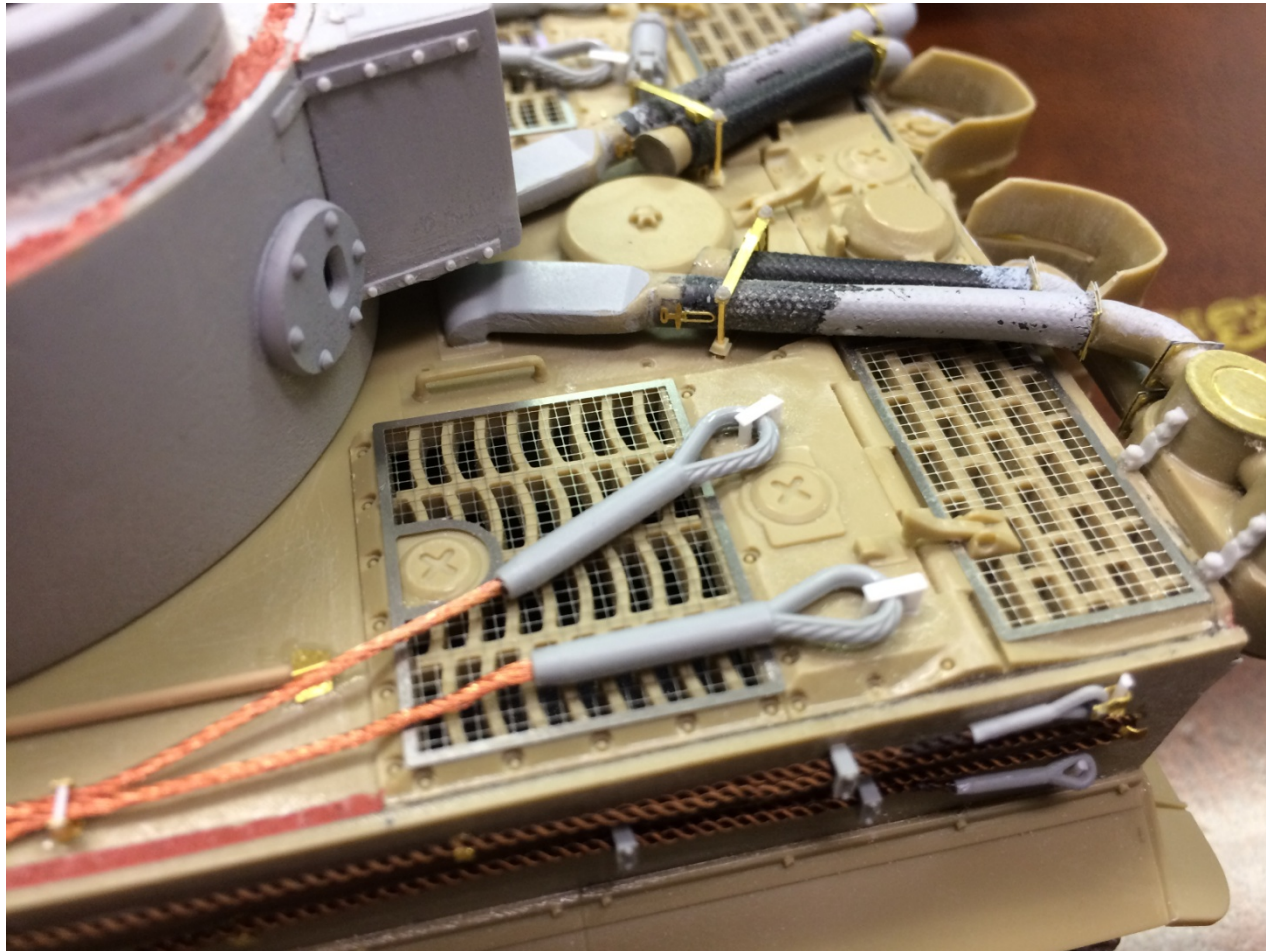

## Tow Cables

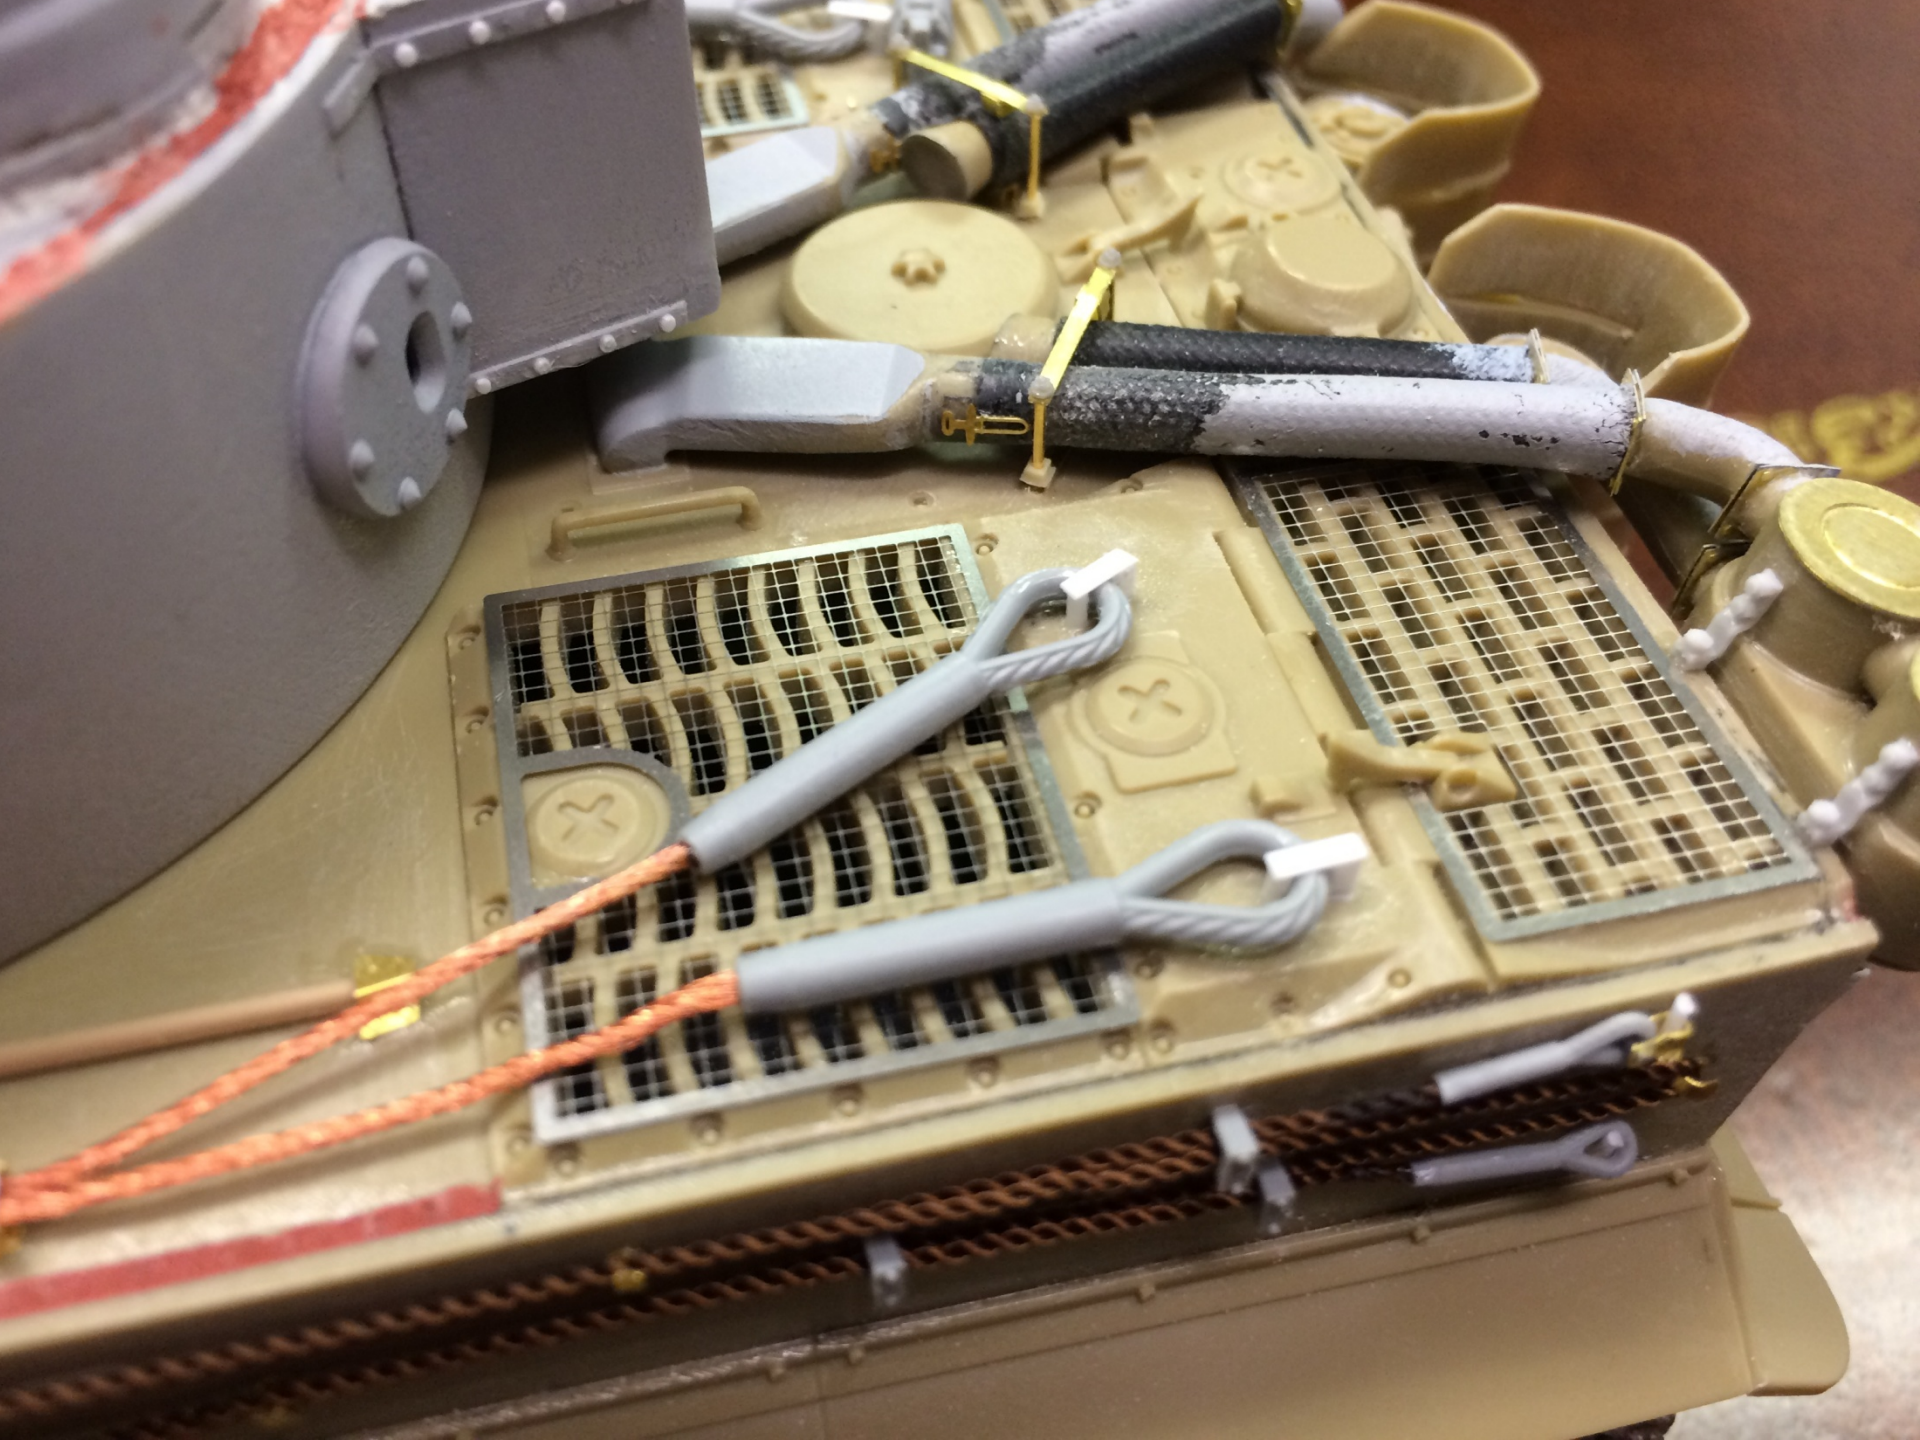

I added the tool clamps made by scratch with styrene rod.

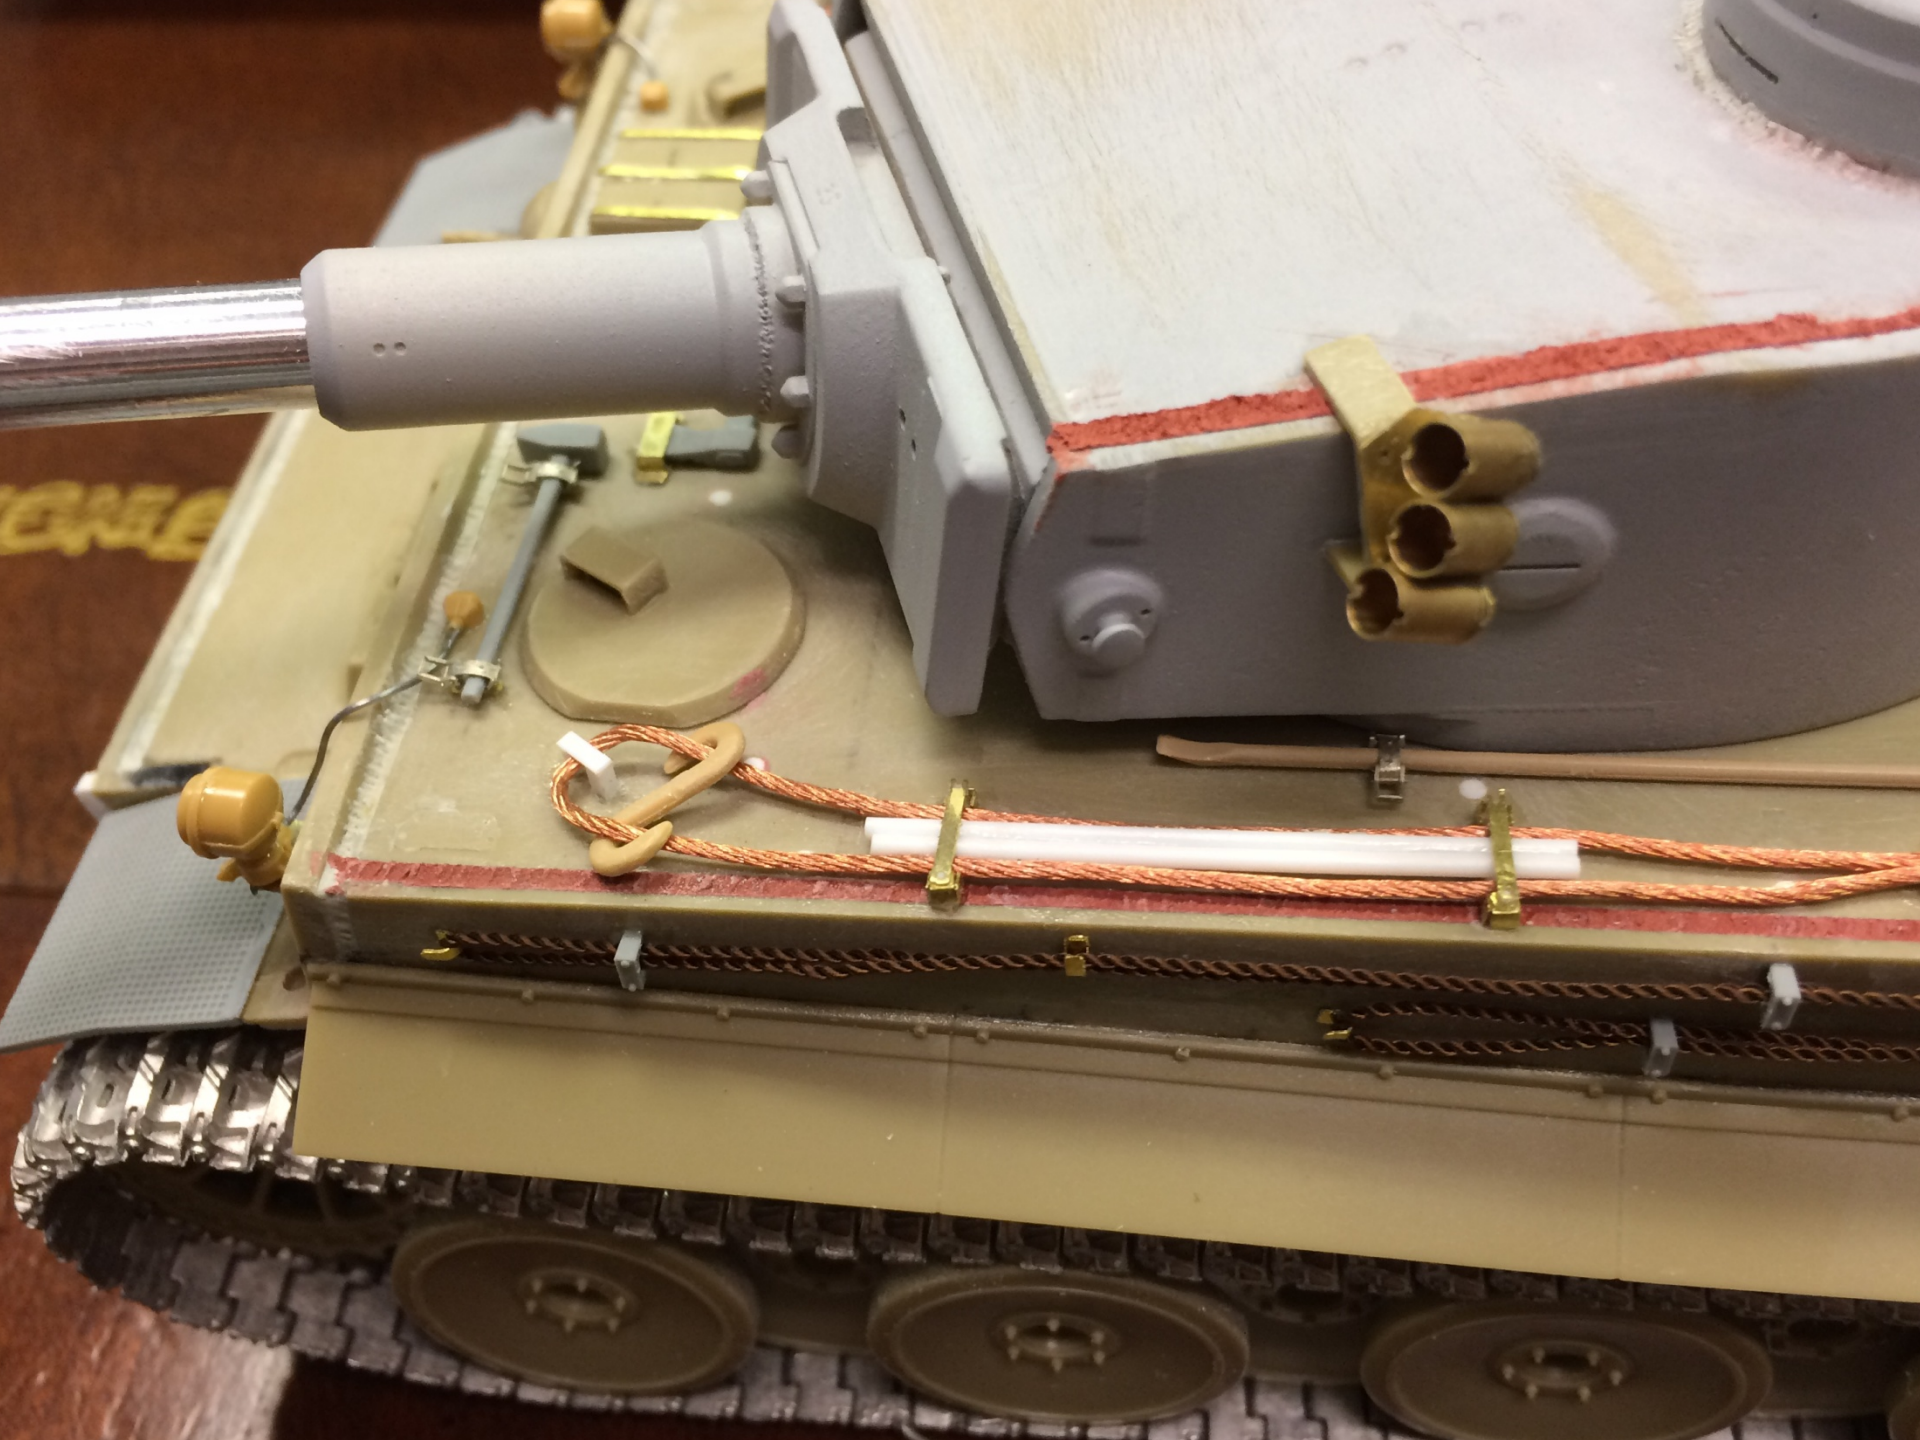

# Tow Cables

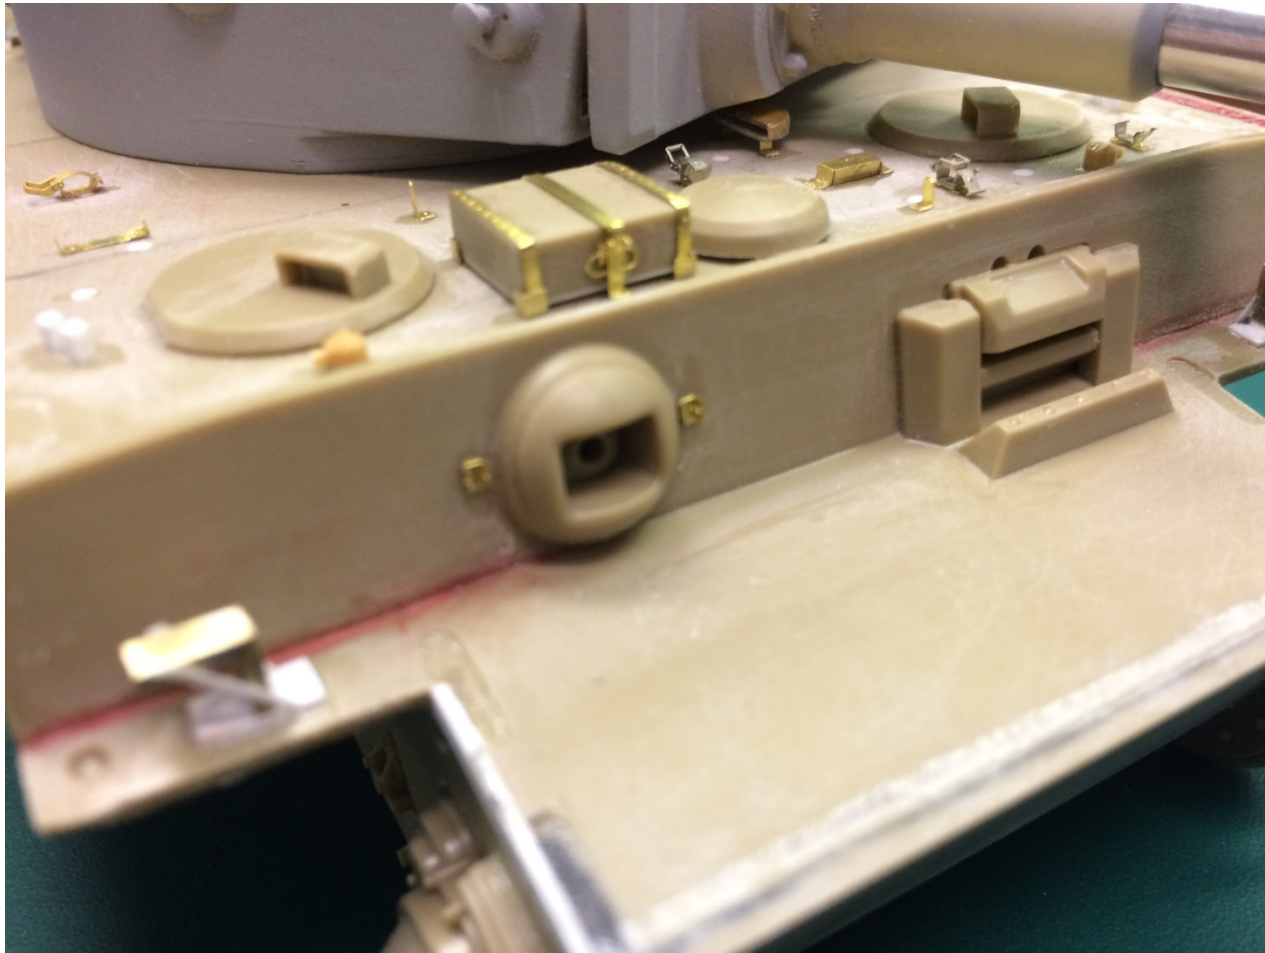

I used Copper cable supplied in the Voyager Accessory Set. For the tow end cables I used spare parts from a Dragon Tiger I kit.

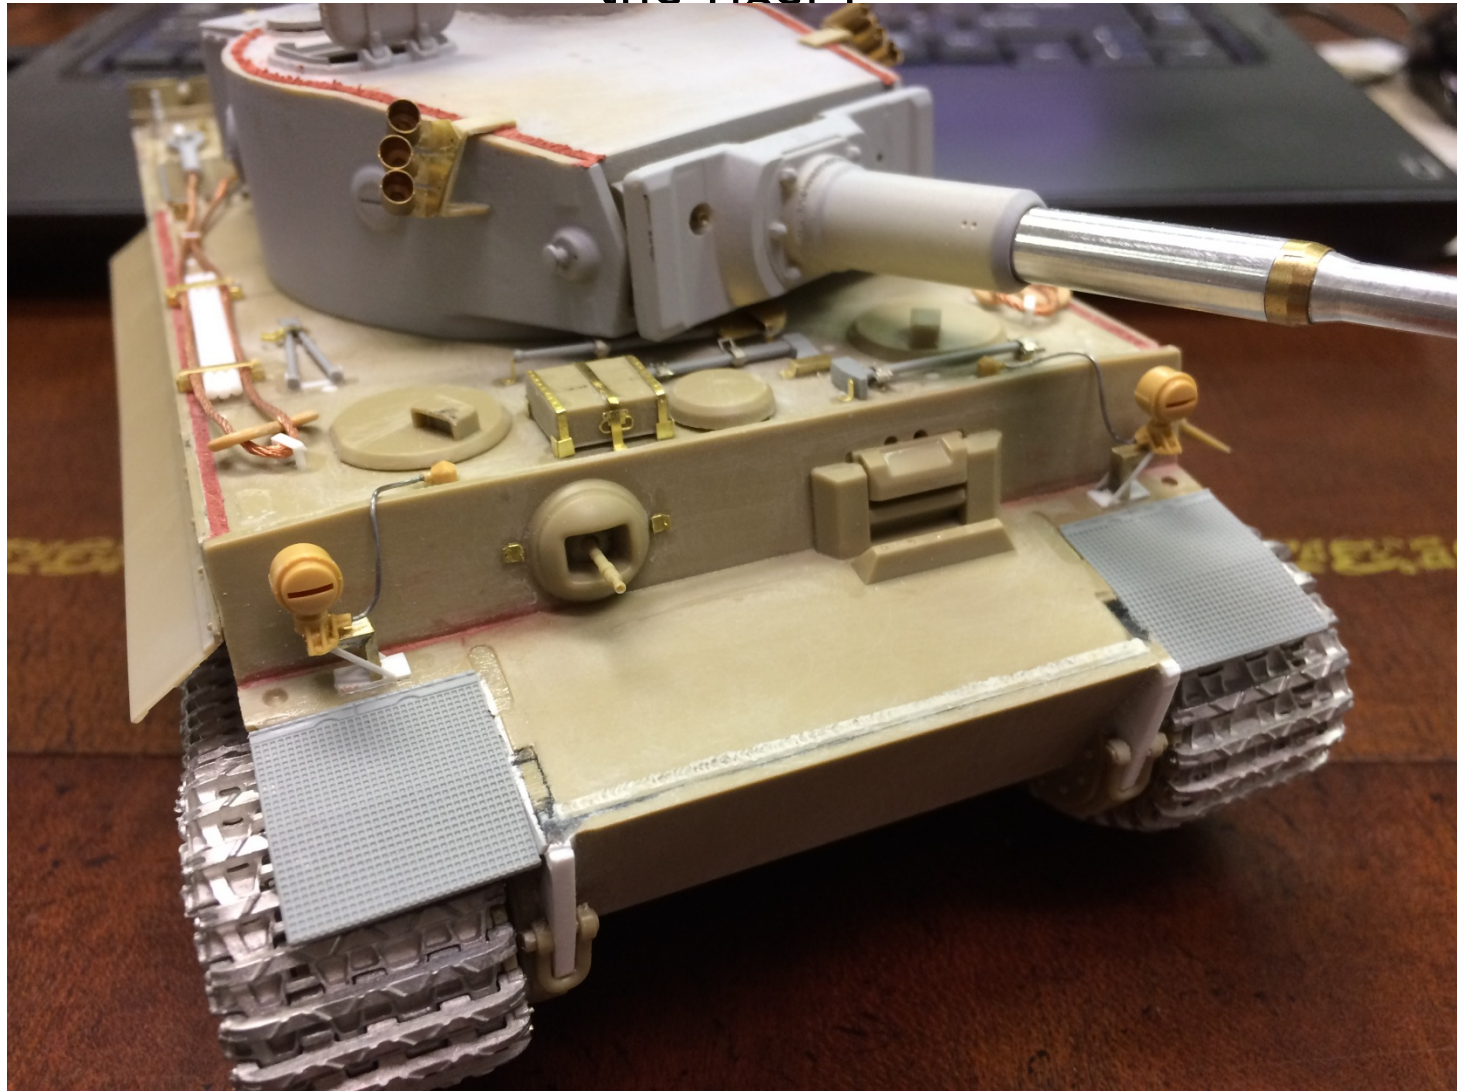

Front Headlights.  
I first began by building the headlights mounts.

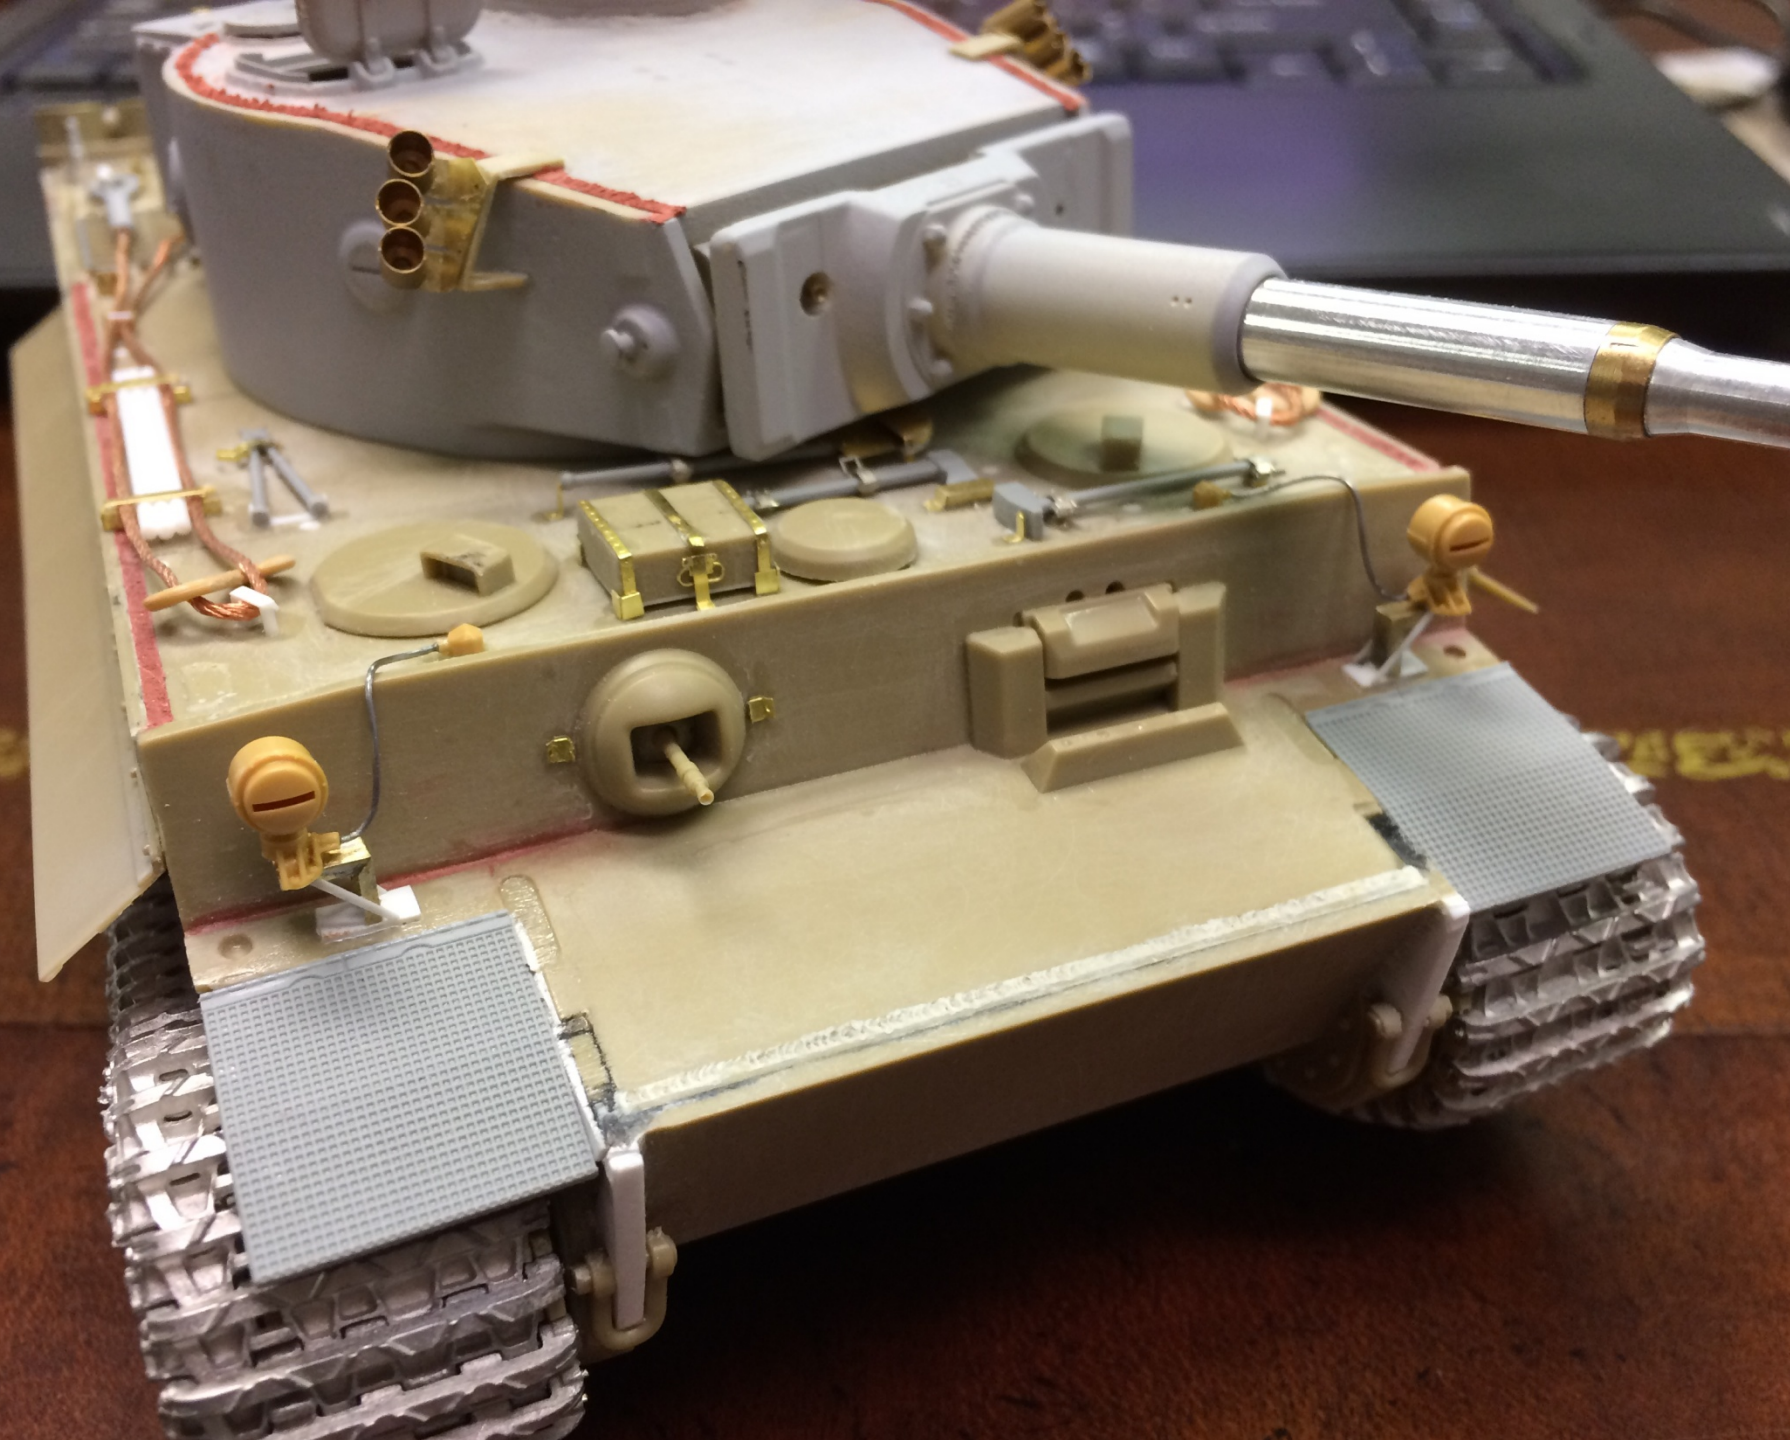

## Front Headlights.

Then I used the lights and mount from the Asuka Vehicle Light Set which has more detail over the kit supplied parts. I then used Fine Lead wire to make the connection to the armored cover on the Tiger I

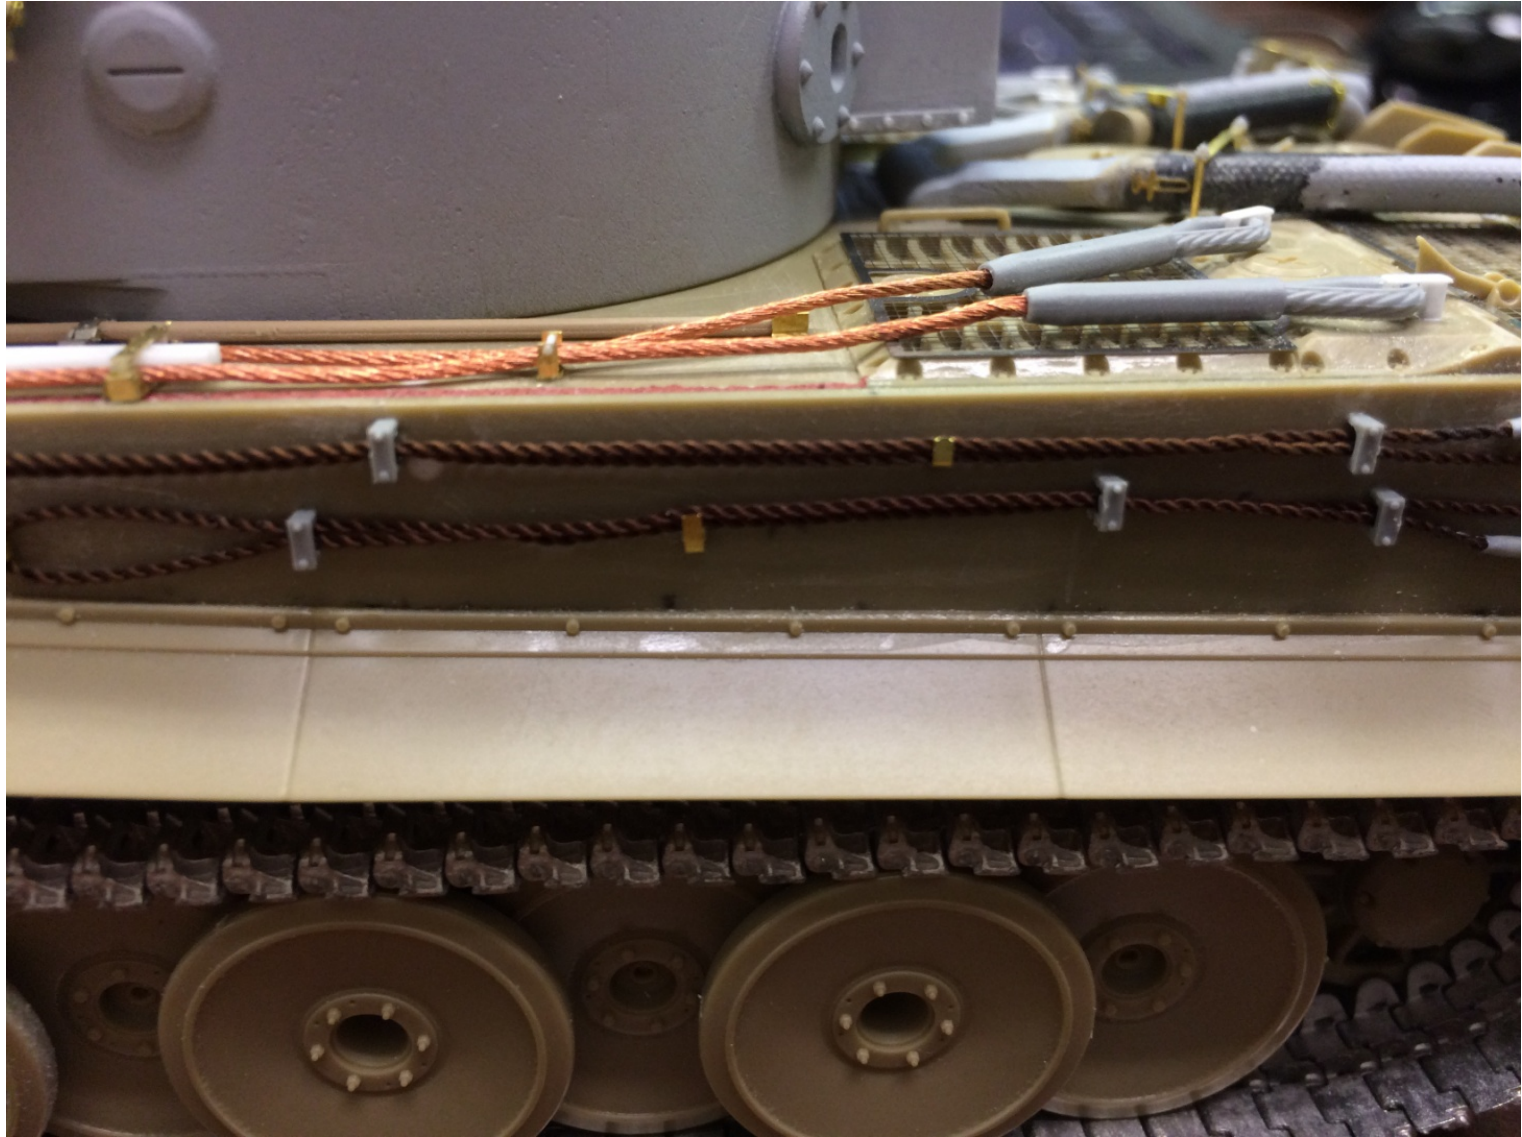

# Track Cables

These are the cables used for replacing the tracks. To replicate this I used a Size 5 Silk Beading Cord by Griffin. This comes in different sizes as well. It also comes in Nylon. Try and bead shop or Michaels Craft Store for this item. I stock some also.

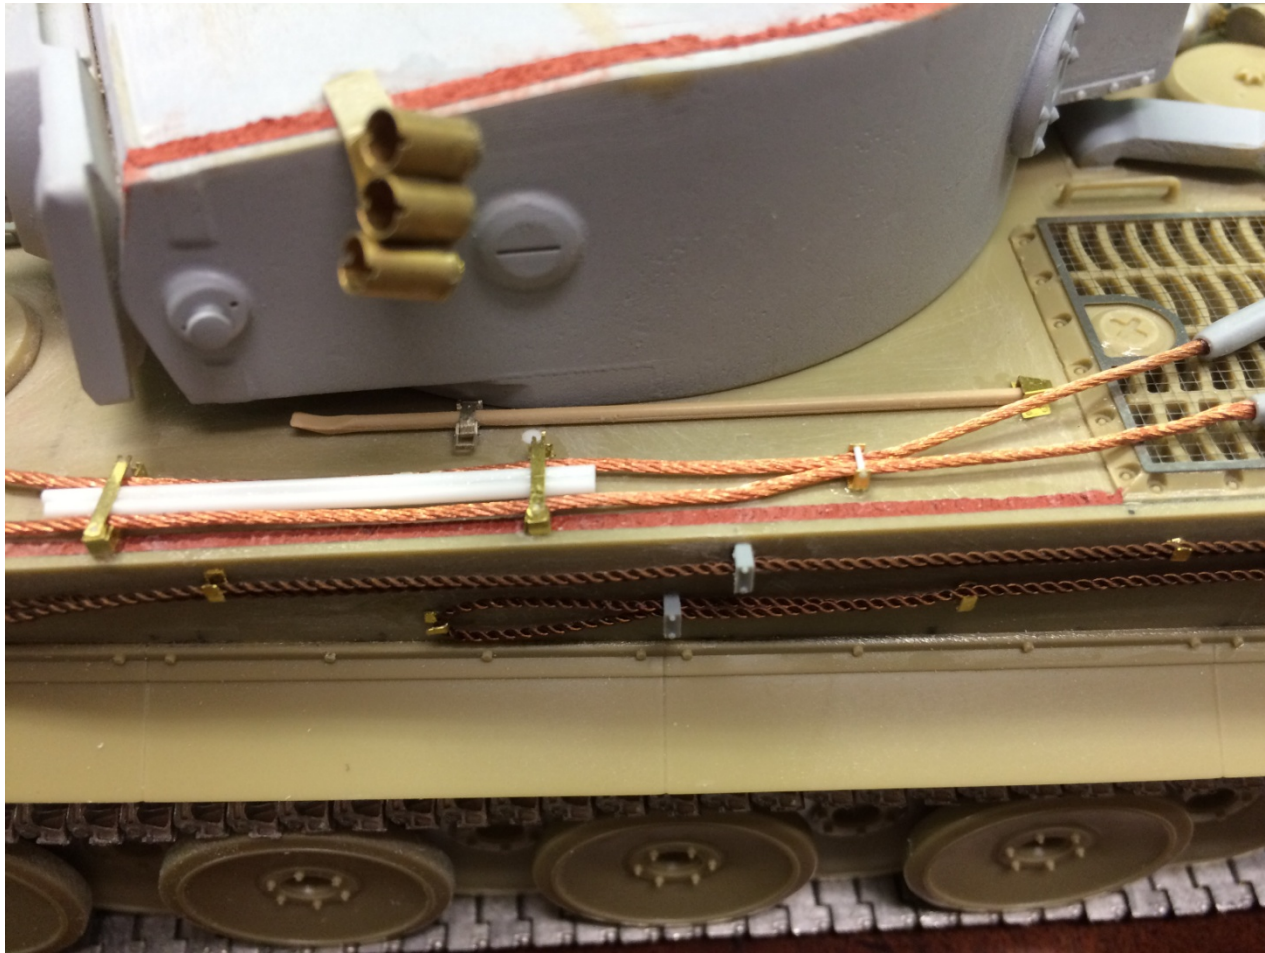

I first added the brackets per the instructions from the Voyager PE Set. I also used Plastic brackets from a Dragon King Tiger Kit.

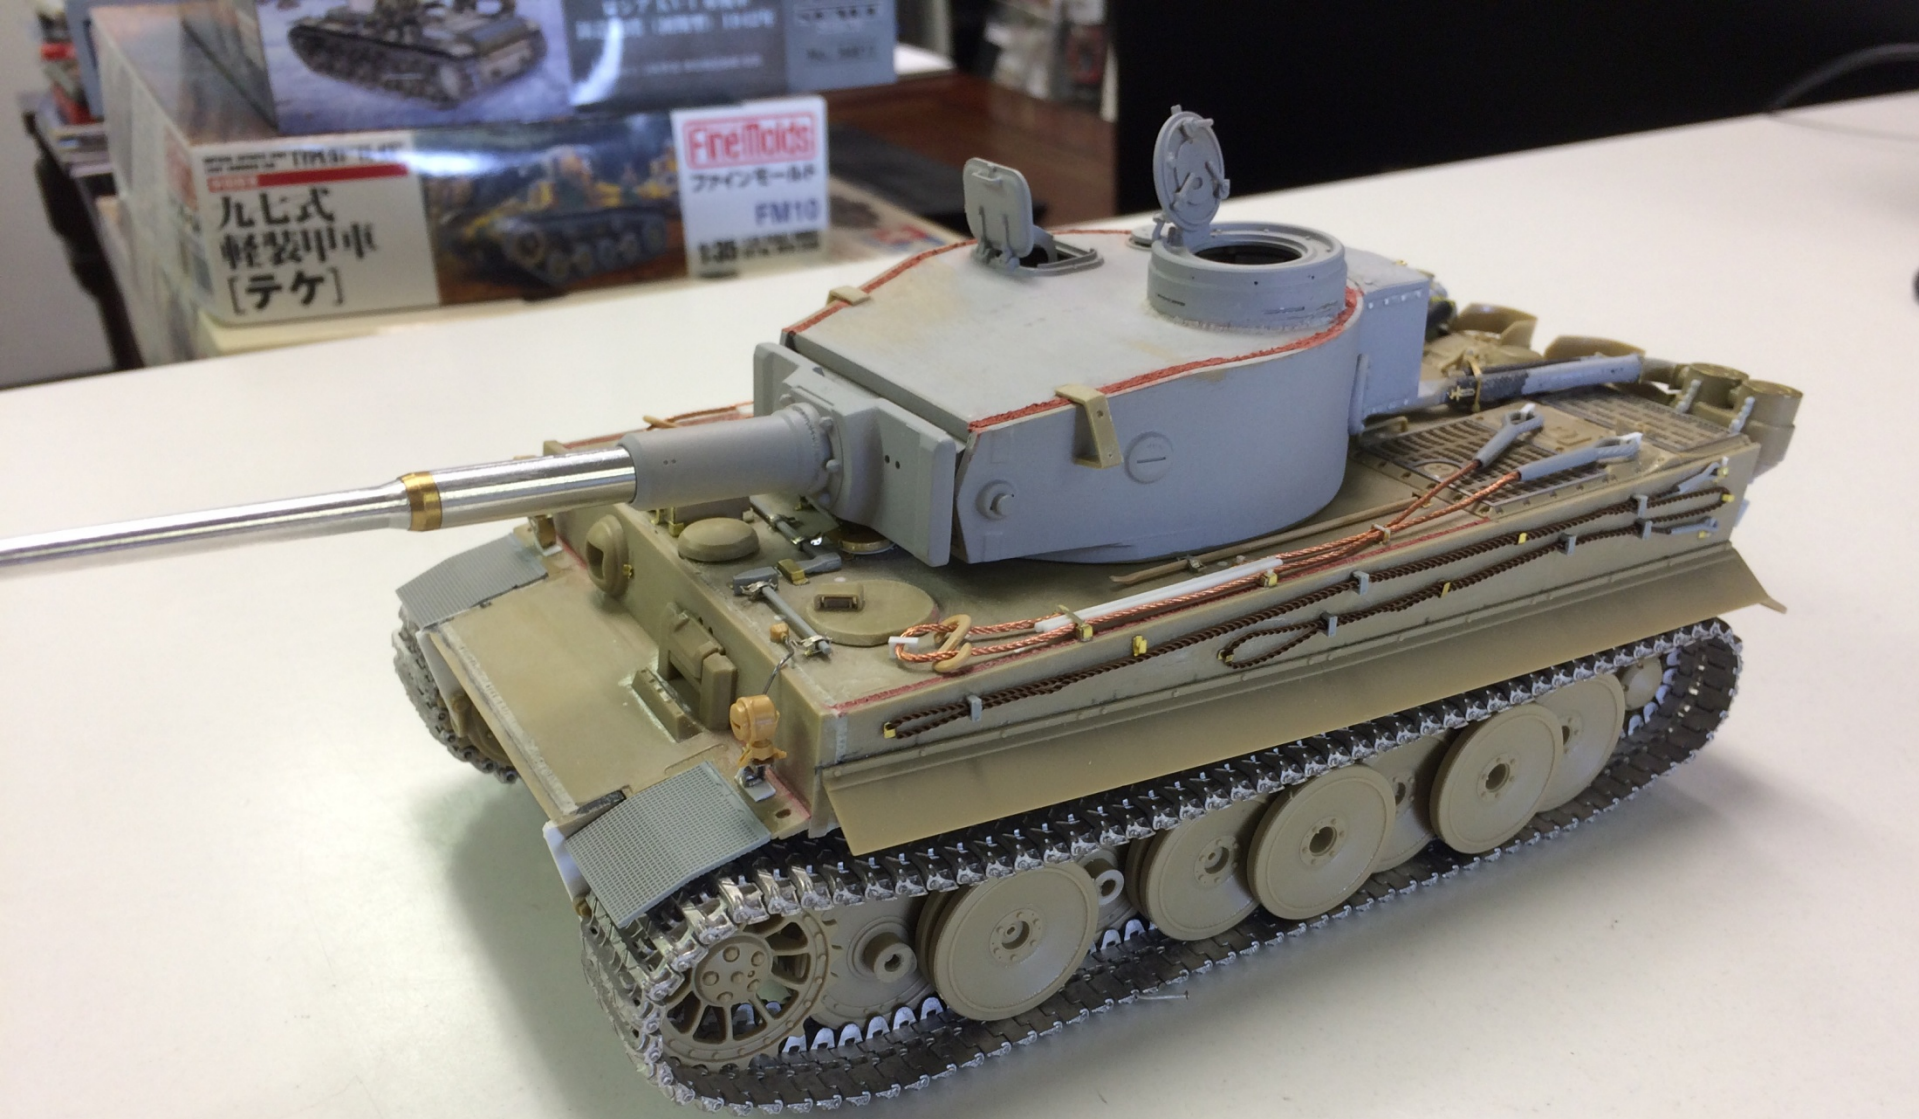

# Turret Details.

Added the Metal smoke chargers.
