

Let's talk **SKIN BOOSTERS** (Teoxane Redensity 1) ✂ ✨

Redensity 1 is an award winning injectable skin enhancing treatment somewhere between a mesotherapy and a very fine filler. It is packed with hyaluronic acid, amino acids, vitamins and minerals. It works superficially on the skin to improve skin texture, hydration, complexion and fine lines to maintain that 'glow'.

Where is it used?

Anywhere you have skin! But most commonly on the face/neck/decolletage.

Procedure/Appointments

- Appointment: 30 mins or can be added on to any other treatment extending it by around 10 mins
- Main side effects: Uncommon, bruising and swelling mainly
- Back to work: Following day – for 24-48 hours you will have small bumps under the skin until the product is completely taken up by the skin
- No exercise/make up/alcohol for the rest of the day
- Maintenance treatment: As often as needed

Top tip – I find this a really lovely add on treatment for botox! With botox clients love the impact it has on the skin around the eyes and forehead, redensity can be used to give some attention to the lower face to complement this.

How much does it cost?

- From £180
- Can be added on to another treatment for £100
 - Can add to toxin or dermal filler treatment (not appropriate to use at the same appointment as another skincare treatment)
